Thread: [Looking for User-agent and referrer switcher](#)

Gold Spot - January 22, 2014, 4:53 pm

Looking to change user-agents of my webclient or webbrowser.

Listbox1 for the User-agents I have buttons to upload txt into list box

Listbox2 for the referrers so I can upload a list of my own links that say this is how I got there. Adf.ly looks at your referrers to see if its a legit view.

Looking for change user agent and refer on visit to a website I have a loop to put these into.

I just dont no where to find these codes. If you can help me that would be appreciated since this is the last thing i need to finish my program.

Don't "find" them, make them. It shouldn't be too hard if you know how to program.

your an idiot.

just add it to the headers.
