Thread: [My Personal RAT/Botnet Rating List](#)

KingVS - January 22, 2014, 5:40 pm

1: Plasma RAT

- + (Has an inbuilt miner very good for mining CPU) Also very stable overall and has a small output.
- Does not have some common features like Remote Desktop & Webcam Stream.

Overall Rating: 8/10, the sales thread can be located [here](#).

2: DarkComet

- + Free with many working features and pretty much everything you need on a remote administration tool. The output is also pretty large which can be a downside for things like Java Drive-By when you need a quick execution.
- Sometimes it can be annoying because it duplicates the same slave not only that but it is not very stable and it doesn't have a miner, however it is free after-all.

Overall Rating: 7/10, a tutorial thread can be found anywhere in the same section this is posted in :)

3: Cybergate

- +Very simple to set up since there are many tutorials and even its own section on HF. Also most versions are free so you don't have to worry about paying.
- Used to be ideal but now I think it is way outdated and not worth using anymore since there is a better free RAT (DarkComet)

Overall Rating: 6/10, a tutorial thread can be found anywhere in the same section this is posted in :)

4: Plasma HTTP

- + Very stable, small output, and great for herding loads of bots. Also does not require port forwarding and you get to manage all your bots online.
- May be a bit pricy for most members and currently is being worked on and updated to where you will be able to select a victim instead of it selecting all victims automatically for commands.

Overall Rating: 9/10, the sales thread can be located [here](#).

These are just my personal opinion so I would prefer if nobody gets offended. This thread will also be updated in the future!

Jumbo Cactuar - January 22, 2014, 5:42 pm

PlasmaRAT doesn't mine GPU does it? Thought that was just HTTP

KingVS - January 22, 2014, 5:44 pm

Thought that was just HTTP
Thats right, I updated the thread thanks.

Dereck - March 19, 2014, 5:51 pm

Plasma HTTP mines bothh CPU and GPU ?

jari - March 20, 2014, 11:03 am

Nice gravedig twat.

And yes it does mine both since 1.5

Anonymous187 - March 20, 2014, 11:15 am

I use Plasma, i just open plasma a few times per day and make sure i have the option auto send miner to bots as they connect enabled. Now i listen to the port i use and all my slaves and new slaves come up.

Miner will be installed to new slaves and i close Plasma again to reduce the internet usage and computer's CPU usage!

Miner goes on because it works on itself, it does not need to be connected with plasma in order to function!

Very nice!!!!!!

fpdalis - March 20, 2014, 11:34 am

I use Imminent Monitor 3, it has an very good inbuild cpu miner ... and it has some more feautres than Plasma RAT.

And thank you for the PlasmaHTTP information, it looks very good and i think the good rating convinced me to buy PlasmaHTTP ...

KingVS - May 9, 2014, 2:42 pm

I'll add that in as soon as I have some experience with it :)

DetoxBoss - May 9, 2014, 10:08 pm

Lol interesting nice post ;) thanks for the info

Winners - May 9, 2014, 10:11 pm

Nice opinions there. Forgot to throw Albert Rat and Shades in there.

DarK-D3v!L - May 10, 2014, 4:58 am

i don't know how you could say that plasm http is stable as a net malware ...

?Schock - May 10, 2014, 5:23 am

Plasma is junk

It needs devlopement the Miner gets 5x less power then i get on IM with the same slaves.
but with 4th as the new seller that wont happen

Crashed - May 10, 2014, 1:38 pm

Hmm? Plasma RAT does indeed have GPU mining from the last update, and no other RAT can beat its mining power. I have both Plasma & IM.
