Thread: [Need a minecraft client coder to code a private client. Name your price.](#)

MasterSecretFire - January 23, 2014, 1:25 am

I need somebody to code me a minecraft client from scratch.

A GUI compass that renders a compass on the bottom left of the screen by the first item on hotbar, must be a working compass.

an aimbot that only aims on the y axis, so that i can aim left/right to adjust for headshots for guns

-a good adjustable forcefield/killaura with a friend option

-ChestESP

-PlayerESP

-Tracers

-ChestStealer for certain items that can be named either ingame or a txt file

-antiknockback

-Nametags, otherwise could be called BigNames,

-xray,

- And since this is a guns server, is there a way to make one item, for example a wooden shovel, act as a diamond axe? If there is plz make one. Name your price, updates are going to be needed.

Contact FriedBiscut for more details:

This is the correct forum. He's looking to hire a coder, not buy a pre-built client.
