What the code does is gets the source of the website.

My code is:

```
Code Dim str As String = Me.RandomString(10).ToLower()
```

```
Dim postReq As HttpWebRequest =
```

```
DirectCast(WebRequest.Create("http://mailnesia.com/mailbox/" & str), HttpWebRequest)
```

```
Dim postresponse As HttpWebResponse
```

```
postresponse = DirectCast(postReq.GetResponse(), HttpWebResponse)
```

```
System.Net.ServicePointManager.SecurityProtocol = System.Net.SecurityProtocolType.Ssl3
```

```
Dim postreqreader As New StreamReader(postresponse.GetResponseStream())
```

```
Dim thepage As String = postreqreader.ReadToEnd
```

```
Dim match As Match = Regex.Match(thepage, "\b([0-9a-z]){32}\b")
```

```
If match.Success Then
```

```
LogInRichTextBox1.Text = match.Groups(0).Value
```

```
MsgBox(match.Groups(0).Value)
```

```
End If I tried using webclient to get the source. But i still get the error.
```

maybe your random string dont exist?

geraldososa - January 25, 2014, 7:16 am

I tried using it without the string and just the url but it still does not work.
