Thread: [Make Your JDB URL Trusted!](#)

VladHQ - January 27, 2014, 6:00 am

There are many websites using the Open Redirect method, and you can put your infected URL into a trusted URL such as:

Code `http://labor.vermont.gov/LinkClick.aspx?link=http://www.infected.com/Code`
`http://us.ard.yahoo.com/SIG=15n3q5c29/M=289534.11223993.11781333.10885343/D=he/S=18343`
`859:FOOT2/Y=YAHOO/EXP=1274825933/L=YcSUjEKjqNAC2RCjS_sbeRbo0GpsAkv8MK0ACDIS/`
`B=pFuES2KJiR0-/J=1274818733570885/K=FPiTgxmujdul0W5j.k5shQ/A=4808190/R=0/SIG=1136q`
`nvkg/*http://www.infected.com/`

How to hack Google?

Simple. You must have your website indexed in Google. If you don't, this won't work for you.

Example:

Code `http://www.google.com/search?hl=en&q=site:hackforums.net&btnl=1`

In the q GET tag, make sure to put a query that shows up the first result that goes to your site.

There are a lot more of such websites, and can be easily found with a Google search. Good luck with hacking!

Hello

It is very interesting. Do you know a url redirection for Facebook?

VladHQ - January 27, 2014, 6:12 am

They patched most of these redirects, so no idea.

tux1 - January 27, 2014, 1:43 pm

The google method was pretty nice, thanks for sharing.

VladHQ - January 27, 2014, 3:22 pm

You are welcome, tux1. I will be posting new ones later on.

VladHQ - February 3, 2014, 6:00 pm

Not a lot of comments, this is a pretty good sort of "exploit".

That's how people are :/

Thanks for this Vlad, it'll come in handy later on.
