Thread: [\[VB.NET\]Create a Folder](#)

codepoet - May 4, 2010, 3:55 pm

This is a VERY basic way to create a folder

Lets create 1 Combobox, and let a label over it with the text : "Path:"

Under that, make a Label named "Name : " and under that do a Textbox

And Under that make a Button with text Create.

In Combox collection (list) add like "C:\" or "C:\Program Files" or "D:\", just whatever ur drive is.

Double click the Button, we're gonna use filesystem (My.Computer.FileSystem)

```
Code If My.Computer.FileSystem.DirectoryExists(ComboBox1.Text + "\" + TextBox1.Text) Then
    MsgBox("Folder already exists, pick a new name.", MsgBoxStyle.Information, "Folder
Exists")
```

```
    Else
```

```
        My.Computer.FileSystem.CreateDirectory(ComboBox1.Text + "\" + TextBox1.Text)
```

```
    End If
```

Not bad. It could be explained wayy more, though.

This is a TUTORIAL.

Yui Hirasawa - May 4, 2010, 4:57 pm

Helpful, thank you very much
