Thread: [\[test\] Decrypt/Crack this file \[test\]](#)

?Sharkisha - January 27, 2014, 5:42 pm

The first person to Decrypt this file of its password and get inside and Pm a link to the .zip/.rar files inside the content is the winner. I wan't to see how easy it is to Crack into so I can boost security on it if needed.

There is no prize currently for this challenge, maybe in the future.

<http://ge.tt/6mtockG1/v/0> <<--- No virus scan.. sorry, you can scan it and post results if you feel its a virus.

jakkin - July 31, 2014, 8:13 pm

Will you give us an idea of how long the password is? It makes it harder then is realistic if we have to assume the password goes up to 100 characters.

Stealth™ - July 31, 2014, 8:14 pm

It's obviously something that the OP can't crack and that's why he's posting here :P.

jakkin - July 31, 2014, 8:22 pm

Nevermind, it just cracked. 19.02 seconds to decrypt the password on an Intel i5-4670K CPU.  
Edit: Forgot to mention it was Ubuntu 13.12 on a virtual machine.

I don't have enough posts to PM yet, so I posted the link here.

<http://www.megafileupload.com/en/file/554748/cert-password-123-zip.html>

If it asks, the password for the .zip file is the same as the one I had to crack.
