Thread: [\[ANDROID\] Flappy Bird - Score Hack & Speed Hack](#)

Hydra - January 29, 2014, 5:30 pm

Need to have a rooted phone.

Want to show off with fake stats in Flappy Bird? This tutorial will teach you how to do so.

If you've used Cheat Engine before, this is a very basic version of it. Same concept. Value >> Search >> Change >> Search >> Modify.

Can't stress this enough. Read carefully and read a step ahead. I typed this tutorial up so you don't need to, but you must read carefully and follow the steps. Do not skip any steps. If you have any questions, POST them. Do not PM me!

1. [Download Flappy Bird](#)
2. [Download SB Game Hacker](#) - [Source from XDA](#)
3. Install both and open up SB Game Hacker. Agree to the terms.
4. Grant root access and then minimize SB Game Hacker.
5. Open up Flappy Bird and start a match. Get 1 point and die.
*If you've already started playing, and have a high score, you might be better off going to App Info and clearing the data to reset the high score. It would be easier for you to do the method.
6. When you get to the "Game Over" page, click the tools icon on your top left screen.
7. SB Game Hacker will open up. Type in "1"(or whatever your best score is). Hit Search.
8. Press OK and start another match. Now get 2 Points.
9. Repeat steps 6 and 7, but replace "1" with "2". (You'll get a list, just hit Continue)
10. Now repeat steps 6-8 2 more times, make sure you switch out the input value with the new best score.
11. This time, you'll have 5 entries in your list. Enter what you want your new high score to be, and hit Modify.
12. It will close out and you'll see your new high score. Click tools icon >> Menu Icon(Bottom Left) >> Exit
13. Take a screenshot and show off!
TIP Play one more game and die, then take a screenshot. You usually have a platinum medal when you score high but with this you won't have a medal so it'll look faker than me claiming I have Omni's password.

If you fail to pass the current high score, it won't affect the steps, just keep trying till you pass the high score.

The high score stays intact till your phone shuts down.

Hope this tutorial helps you. :)
-iHydra

Not entirely covered in the tutorial but this also has a speed hack. It's easy to use so I doubt you need me to explain everything step by step.

Pre-mades: [\(Click to View\)](#)

*Without Medal - Hacked Ver.

*With Medal - Photoshopped Ver. (Realistic)

You can also use game killer to do this.

There are a few different approaches that work, but this is focused on using SB Game Hacker.

Also, GameCIH or whatever it's called doesn't work.

Hydra - February 23, 2014, 10:59 am

If anyone is interested, I've figured out how to get your modded score into the leaderboards. Might make a tutorial for it soon.
