Thread: [.AVI to a .gif, great for After Effects. \(Compresses without losing quality\)](#)

**Gerion** - January 30, 2014, 3:28 pm

Hey, Gerion here with a great tutorial on how to convert a .avi to a .gif without losing any quality, it compresses the avi so the gif is a low size!

Let's start this off right now!

First, let's head over to [VirtualDub Download's](#) and select the version you need for your computer.

Second, after doing that, install VirtualDub and open it up!

Third, Find the avi file you want made into a gif, and click File > Open > Select AVI

Fourth, After importing it, head over to File > Export > Animated Gif and select whatever you need.

Fifth, find a site to upload it, and upload your .gif

That's all, if this helped you in any way, please leave a vouch on the thread.

Hope you have a great time doing this!
