Thread: [Looking for program that takes screen capture on mouse click then stores the images](#)

mamaluke - January 31, 2014, 12:08 am

If anyone knows how to make a program that will take screenshots of my screen whenever the mouse button is clicked then store the images in a folder on my hard drive. Please let me know I'll pay for the code.

Try hyper desktop and assign the key as a mouse click etc.

This could easily be coded in VB.NET, search how to do screen capture and how to record mouse click, assemble everything and voila! :P

Just what I was going to suggest, a VB script.

Mouse? - January 31, 2014, 7:31 pm

I will develop this for you. PM me.
