Hey kut can I get a copy of it so I can do a review on it? I need some practice so I can apply for review and say ive done a few reviews.

Also I vouch for kut, no outstanding scam reports, and the product is amazing, been tracking it for a while now.

davidt - May 5, 2010, 11:00 am

does it work in 64bits os'es?

Djinn™ - May 5, 2010, 11:01 am

I've had it for a while and think it is really good. + Probably one of the best support around here you can get.

CustomiZer - May 5, 2010, 10:41 pm

Its been a long time since I've seen a staff sell some stuff around here..looks nice though. Wish that there was an unlimited stub package ? (thugh it is a lot of trouble for the coder ?)

kutmustakurt - May 5, 2010, 10:48 pm

Basic package price dropped to \$15. ?

This is just an Introductory Price for first 10 buyers after that it will be increased to \$18.

Techno - May 5, 2010, 10:57 pm

Wow, looks amazing Kut. <3 Hope all your sales go good
Obv vouch for you

kutmustakurt - May 6, 2010, 2:05 am

@ icyberhack

Think about it, how can I guarantee unlimited stubs for a product? Do you really think anyone offering unlimited unlimited stubs will ever do it?

What would it even mean, I will give you unlimited stubs till I die or leave this forum ?

What would be the frequency of these stubs:Every month or right after the stub is detected by 1 AV on NVT or other scanning website.

Till the next version comes out

Now, I am not saying it's hard for me to give unlimited stubs but think about it:For the first question the buyer might deliberately put the stub on virustotal.com or other sites.

For the second question I might release the next version in one week then you will feel ripped off.
:P

I am trying to as genuine for a reasonable price as I can. IMHO The prices are the best you can get currently looking at the competition, if you can find a lower price I will match that members price. ?

@ Techno

Thanks. :)

iDarky - May 6, 2010, 2:07 am

I may buy this soon, have you tested this on BFBot?

TheMedigator - May 6, 2010, 3:45 am

i want to buy it but the last 2 crypters i bought were ment to be FUD and loads of AV's have been

detecteding them im not stupid and sendin them in or anything like that there detechd when i bought them (like SPK's crypter) was detected and the RAT wont work when i crypt it (cybergate) So ill buy but i really dont want too loose more money on a crypter that dont work properly :-l

CustomiZer - May 6, 2010, 6:21 am

But then How long do you suppose each stub will remain FUD ?

kutmustakurt - May 6, 2010, 9:54 am

@ icyberhack

Honestly I have no idea how long the stub would be FUD.

I would love to know myself. ?

To even give you an approximate answer I need to know the following things:Does the AV installed on your local machine send the samples anonymously?

Which services you do you use while spreading?

Do you target a specific group while spreading or just go berserk to get as many victims as possible?

Are you binding the FUD crypted file to another file, if YES is that Binder FUD?

How long do you suppose the stubs of that Binder will remain FUD?

Does your victims PC send anonymous reports to AV companies?

Do you share your PC/Laptop with anyone? As they may willingly/jokingly upload file to sites like Virustotal.com

All I can say for sure is you buy the Crypter, use it and then post it in this thread letting me and

others know how long your stub lasted.?

@ Paradoxum
Thanks ?

No.

Youtube videos

No specific targets

No, not using any binder

I don't bind so no answer to that

No idea most use only free AVs or most have no AVs at all..?

No way this is mine and none uses it

kutmustakurt - May 6, 2010, 12:23 pm

Your Stub on a rough account minimum should last 3 weeks or so, provided the details you have given are 100% true and there are no external factors into play.

I hope this answers your question ?

I have always used kutmustakurt's crypters , they ALL were awesome , so you wont regret buying from this guy.

-Dartz - May 6, 2010, 1:48 pm

Kut, I do actually suggest a package or two.

It'll be this:

- + 1 Builder License

- + 4 Stubs

- + 1 Extra stub every two weeks.

- + 2 Week Support

- + Replacement of stub if detected within 2 days of supplying the stub. (Conditions apply)

- + When ordering can select the Encryption you want in the crypter(TEA, RC4, GOST, DES, XOR etc.)

- + Stub replacement \$5

Price: \$50

- + 1 Builder License

- + 4 Stubs

- + 1 stub every week!

- + 2 Week Support

- + Replacement of stub if detected within 2 days of supplying the stub. (Conditions apply)

- + When ordering can select the Encryption you want in the crypter(TEA, RC4, GOST, DES, XOR etc.)

- + Stub replacement \$5

Price: \$70

Major money there, also, quite a fair package.

CustomiZer - May 6, 2010, 4:26 pm

Yeah..probably a stub every week or a stub every 2 weeks would be good ? Though it is a bit tiresome for the coder. Maybe you could take a small fee of 5-10\$ every month

kutmustakurt - May 6, 2010, 10:17 pm

I will think about it. Custom Packages coming soon...

Reasons to buy TA Mini crypter:Currently the Best support in Marketplace. You don't believe me ask the sellers of other crypters, they will themselves agree.

Totally FUD. Does not require any .NET dependencies. you may PM and ask the buyers and other members who currently are using it.

All the features are built in, so no extra need to click on different little boxes.

Works on all OS 32 and 64 bit.

Money collected will be used for HJT and TA.

kutmustakurt - May 13, 2010, 7:24 am

Yep the public stub is being used by 13 members from past 2-3 weeks.

It is still FUD.(only ASaured and Ikarus detecting) but what more can you expect from a public stub.

Private one is still FUD.

Recommend me some new packages, I would be happy to see your views. ?

Neroxan - May 14, 2010, 1:29 pm

Considering the quality of what this is versus crypters which are generally re-fud's sold cheap and lose value fast due to mass sales because of the dirt low prices, I have to agree with the pricing. Its always better to pay a bit more and get programs which arent spread like Std's because your stubs code will stay undetected longer.;)

I would like to make this my official vouch for this amazing sales thread.

We have one of the greatest Hackforums members selling this amazing and flawless software product you can get on Hackforums. We also have another amazing, reliable and trustworthy Hackforums member offering top notch customer support. The state of this partnership is undeniably one of the greatest that Hackforums will see. Any money invested in to this software will ensure an amazing profit, great experience and many unpredictable things.

What's even better, you have the guarantee from two of the most trustworthy members on these forums. Kut and Factor ensure that your experience when using this product is of a happy nature. With amazing customer service, as previously mentioned, and amazing, reliable and useful updates, you will definitely get your moneys worth with this product.

I'm not finished. We all know that Kutmaskutart is an amazing HiJackThis helper. I myself have joined the crew, and the fact is, it's pretty difficult I must say. The fact that he has finished almost all, maybe even all his Practice logs shows true dedication. How might this help with this you may be wondering, it shows true dedication for what he puts his mind too, Kutmaskutart has placed much hard work and effort into developing this product for your personal gain, and you have his guarantee of a legitimate product of which is being sold.

I recommend this product to be purchased for anyone who's looking for an amazing software product to cover their daily needs!

i was very intrested in buying this crypter, but the owner woudnt even add me to msn, im not spending \$50 on a crypter, where i have to wait for replys threw PM on a forum if i wont support, I want real time talking, Lost a sale.

kutmustakurt - June 16, 2010, 11:48 am

@ Animal

I have many customers, none of them added on MSN, I don't use MSN, please read the first page of the thread.

Each one of them gets the top most support you may ask for in the market. If you want Pm me, I will give you their profiles, PM them and ask them yourself about the support. ?

I am thankful you were interested in TA Minicrypt and hope you find a better crypter with MSN support on HF or some other forum marketplace.

Thanks.

It's \$30, not \$50.

Ub3r PACKAGE:

- + For Ub3rs only.
- + Heavy Discount off on ULTRA PACKAGE.
- + Discount on New Stubs
- + New Stub Replacement \$7

COST of Ub3r PACKAGE : \$30

That being the most expensive package.

Also, I have absolutely no problems dealing with kutmustakurt through private message, as he is almost always online, and he does it through teamviewer.

(Jun 16, 2010 03:02 PM)GeT LiKe AuStiN Wrote: [\[CITE\]](#) Lifetime updates = bs...at most will last 3months...max. Don't give me this shit like the last \$40 crypter I bought, nothing is lifetime...so this is a invalid statement, please edit. Lifetime = 100+ years. Doubt you will be doing this 100 years.

GI on sells non-the-less.

Lifetime of the crypter, not your lifetime.

eXonyte - June 17, 2010, 1:36 am

exactly, so how long is he planning on running this crypter for?

kutmustakurt - June 17, 2010, 2:37 am

@ Members

Please PM me or use the other thread given on the first page for any discussion or questions/suggestions regarding the crypter. ?

@ GeT LiKe AuStiN

I am sorry you got ripped off by some other crypter seller.
Thanks for the good luck on sales. ?

@ Animal

I have no idea how long I am planning on going on with this crypter, yes you may be thinking I can take away the money and rip members off, You have every right to think so, So please let's wait and see what the future holds. ?

I never meant to sell the crypter in the first place, this was a fun project for TA and then I decided to sell it.

Please ask any other questions, in the other thread(link on first page) or via PM.
Thanks.

A Crypter that is under 100\$, let alone 50\$? Lies.

Embrace The Martian - June 18, 2010, 2:07 pm

Can I ask a massive noob question.

All I want is a crypter that will fully FUD my Cybergate 1.02 and DDoSer 3.6 servers and bot.

Will this do that and what package should I buy if so, I only want it on 1 PC.

JayZeeFI - June 18, 2010, 10:57 pm

Sick crypter :D

I might buy dis shit!

Embrace The Martian - June 19, 2010, 6:39 am
