Thread: [How to access any blocked website ! no proxy no download](#)

Mnikkilla - February 1, 2014, 2:14 pm

Hi welcome to my quick and very easy tutorial on how to access any website, either at school, work e.t.c in a few easy steps.

step 1) go to <http://ping.eu/>

Spoiler [\(Click to View\)](#)

step 2) click the link that says "ping"

Spoiler [\(Click to View\)](#)

step 3) type in the website you want to access and click 'go'

Spoiler [\(Click to View\)](#)

step 4) after a few seconds some text should appear copy the ip of the site and paste into url bar

Spoiler [\(Click to View\)](#)

step 5) You've done it, the facebook page should appear, or whatever website you wanted to go on...

Spoiler [\(Click to View\)](#)

this works on almost any website ! this thread took a bit of time to make so please leave a reply like 'thanks your the best I wuv you?'

METALSLUG - February 1, 2014, 8:06 pm

Good tut, thanks for shareing ;)

' i wuv you' :P

Chaykovsec - February 1, 2014, 8:08 pm

Thanks for this. Lot's of, that is MOST school block the ip. Plus you can google website to ip to get it as well. I wuv u

SHADOW REALM - February 1, 2014, 8:09 pm

Or you can just do ping www.google.com to get the IP. Doesn't always work lol. What if you wanna use HF. It has CF so you wont get the IP like that

Goodies - February 1, 2014, 8:10 pm

This assumes very shitty security only targeting DNS requests and/or HTTP host section. This will not work on anything with more security than a middle or high school...

But thanks. I wuv u.

opsafrica - February 1, 2014, 10:44 pm

Nice tut but you could just use a VPN

R I U - February 1, 2014, 10:45 pm

Really a nice share mate , thanks in advance for you kind share

Grin - February 1, 2014, 10:50 pm

Thread title is pretty misleading.

Bam!

godforgive - February 1, 2014, 10:59 pm

thanks alot m8, really useful information and could get really handy.

RexorZ - February 2, 2014, 1:59 am

This is a great share thanks a lot! I will def use this in future

KnockSteadys - February 2, 2014, 3:15 pm

thanks this a cool tut on how to do this it will help alot

Mod525 - February 2, 2014, 3:18 pm

Thanks for the tutorial:) Very useful and helped me out a lot!

.vemla - February 2, 2014, 3:26 pm

If you're on a Windows machine you can just open up CMD (command prompt) and ping the website, ex "ping facebook.com".

When someone is blocking a website thenit is usually through the "Host" file on the computer you're using or the router that you use and when you'll block a website you type in the website address, for example:

www.facebook.com

facebook.com

If possible it's enough to just type "facebook.com" if "www" isn't blocked.

Or just try something other than. ".com" ex. ".nl" or similar.

Thanks for doing the tutorial btw.

Cheers! ?

MrTing - February 2, 2014, 3:28 pm

Most security systems or filters already block this. This won't normally work, especially from a government level (like China).

Cheers! ?school/work computers would block cmd and any batch files -_- Boom!
this method usually works better than using the different domain endings e.g .nl ... this should mostly be used to access facebook

accountcanberemoved - February 3, 2014, 1:11 pm

Well, the school/work techs must be really fucking retarded if they left this out... In our school, they've blocked pretty much everything... We used OPHcrack to get the admin password and installed Tor... that was the only way to get past their "website security".

jetpacks - February 3, 2014, 2:51 pm

thanks so much
really hate the school blocking the sites

bigmantr - February 3, 2014, 2:51 pm

thanks a lot for this good tutorial

Mnikkilla - February 5, 2014, 10:53 am

Thanks for the replys ! really appreciate hem

palkarz - April 22, 2015, 5:22 am

Dunno why ppl replying with " oh gr8 share"

ITS TOTALL CRAP !!

Who uses such a low securiti filtering ??? your mama ???

TRASH IT

Mnikkilla - April 23, 2015, 12:52 pm

TRASH ITwhy are you replying to such an old thread first of all, secondly, every single school I have been to does not filter this so it is quite a good method.
