Thread: [anon tut](#)

xVulnerable - February 1, 2014, 6:45 pm

Thread is temporarily removed.

Yuno - February 1, 2014, 7:13 pm

Very nice tutorial. I may get back into ratting, and this tutorial should keep me safe. :)

logging*machine - February 1, 2014, 11:11 pm

Very nice tutorial. If you follow these steps, you'll be pretty damn immune to feds.

B3A - February 1, 2014, 11:26 pm

Great tutorial

Bravo. Is this gonna get launched out of sf?

Understalker - February 1, 2014, 11:28 pm

I don't see why you don't mention an OFFSHORE VPN.

Any Onshore VPN will be forced to take logs.

Krox - February 2, 2014, 4:47 am

(Feb 2, 2014 12:28 AM)Understalker Wrote: [\[CITE\]](#) I don't see why you don't mention an OFFSHORE VPN.

Any Onshore VPN will be forced to take logs.

I think the VPN services he listed are quite good for that aim.

xVulnerable - February 2, 2014, 6:02 am

(Feb 2, 2014 12:28 AM)Understalker Wrote: [\[CITE\]](#) I don't see why you don't mention an OFFSHORE VPN.

True, although it's pretty much the same thing.

Contacting Cryptic' to get this out of the SF.

Thanks for the feedback.

En1gma - February 2, 2014, 7:20 am

Nice tutorial mate, it should help a lot of people.

xVulnerable - February 3, 2014, 4:48 pm

Thanks for all Brotherhood members who gave feedback.

crypt-trader - February 4, 2014, 5:29 pm

Great tutorial but you may want to add using DNS crypt with the VPN to prevent leaking just to be that much more secure.

boldbirchtree - February 4, 2014, 6:12 pm

I was just about to post about including a Crypter but I see I have been beaten to it. I suppose a

crypter doesn't hide your identity though. Thanks for all the info!

crypt-trader - February 4, 2014, 7:13 pm

The encrypting I was referring to was for your DNS not your RAT. This is to keep your ISP from knowing you are connecting to your VPN. More info can be found here.

<http://www.opendns.com/about/innovations/dnscrypt/>

Agoff - February 4, 2014, 8:01 pm

I do like this tutorial! Definately could research more things to add, and link tutorials here on HF next to the steps for members who don't know how to get around! Very nice though

Supreme??????? - February 4, 2014, 8:03 pm

Thanks for putting up this tutorial. Really helpful!

cyberducky - February 4, 2014, 8:03 pm

Very high quality tutorial man! Keep it up BH.

Long2Close - February 5, 2014, 12:54 am

Thanks for the post!

Quick question - I noticed none of this takes into account performance issues.

I'm already overseas and my internet isn't great, will connecting via VPN and other filters increase my latency? I'm already sitting at about 300-400.

xVulnerable - February 5, 2014, 10:37 am

(Feb 5, 2014 01:54 AM)Long2Close Wrote: [\[CITE\]](#) Thanks for the post!

No as long as you buy a good VPN such as the ones suggested in the thread.

Crashed - February 5, 2014, 11:27 am

Very very informative post xVulnerable! I was always keen for privacy, I was dumb to think BTC couldn't buy domains/webhosting. Thanks alot for this.

Quick question, how do you suppose I can buy No-IP/DynDNS Premium with BTC? The reason I ask this, is because the free ones usually get banned with too many connections.

xVulnerable - February 5, 2014, 11:38 am

(Feb 5, 2014 12:27 PM)Crashed Wrote: [\[CITE\]](#) Very very informative post xVulnerable! I was always keen for privacy, I was dumb to think BTC couldn't buy domains/webhosting. Thanks alot for this.

You can't unless they accept BTC themselves.

revv - February 5, 2014, 12:12 pm

I have a question for you about anonymity with no-ip and rats

I have used no-ip in the past but now I got a new vpn and a new no-ip host to try and stay

anonymous but I noticed when I opened duc no-ip it connected to my old host.

I changed it to my new host, am I still anonymous? I had my vpn on

Crashed - February 5, 2014, 12:30 pm

(Feb 5, 2014 12:38 PM)xVulnerable Wrote: [\[CITE\]](#) You can't unless they accept BTC themselves. Ah I see, how do you suppose one can stay 100% anonymous while keeping a high number of bots then?

1 thing that can also be added in this thread, is changing the MAC address, either manual or using the [Technitium MAC Changer](#)

xVulnerable - February 5, 2014, 12:33 pm

(Feb 5, 2014 01:30 PM)Crashed Wrote: [\[CITE\]](#) Ah I see, how do you suppose one can stay 100% anonymous while keeping a high number of bots then?

Host bots on a botnet which does not require no-ip.

keesvwaal - February 5, 2014, 12:49 pm

Thanks for the share very very nice tut keep it up.

dennisjeeh - February 5, 2014, 12:59 pm

Great tutorial, well explained how to stay safe on-line. I was looking for this. Also could be a nice guide to see all the counter measurements you can take when you think you may be ratted. Thanks for writing!

One question though, how does working in a virtual machine help protecting you? Just curious as I'm a newbie..

_CashMoney - February 5, 2014, 3:36 pm

great tutorials mate thanks for this :D

Psy Ops - February 5, 2014, 4:51 pm

Thanks for this thread man, I always direct people to it.

xVulnerable - February 7, 2014, 6:47 pm

(Feb 5, 2014 01:59 PM)dennisjeeh Wrote: [\[CITE\]](#) Great tutorial, well explained how to stay safe on-line. I was looking for this. Also could be a nice guide to see all the counter measurements you can take when you think you may be ratted. Thanks for writing!

One question though, how does working in a virtual machine help protecting you? Just curious as I'm a newbie..

As stated in the tutorial it would make it less difficult for you to fuck up by logging in some email without your VPN. It's like using an VPS/RDP.

dennisjeeh - February 8, 2014, 12:21 pm

(Feb 7, 2014 07:47 PM)xVulnerable Wrote: [\[CITE\]](#) As stated in the tutorial it would make it less difficult for you to fuck up by logging in some email without your VPN. It's like using an VPS/RDP. I see, thanks for the info, it'll be of use :) Another question if you don't mind, do you suggest using a VM AND a VPS or either? Comobining would be most secure I guess? Thanks in advance

27246518 - February 8, 2014, 2:13 pm

Thanks for all Brotherhood members who gave feedback.

Ballistas - February 16, 2014, 4:59 am

Hey, so, i should use public IP adress at nVPN or dedicated IP? Thanks ?

ILoveGreen - February 16, 2014, 5:11 am

Fine tut. Simple detailed .

But the NO-IP shit will still have our VPN IP

So actually we put all our trust into our VPN provider

We have seen many start working with Law Enforcement

xVulnerable - February 17, 2014, 6:58 am

(Feb 16, 2014 06:11 AM)ILoveGreen Wrote: [\[CITE\]](#) Fine tut. Simple detailed .

That is why you should use a no logging VPN.

Marxo - February 18, 2014, 12:17 pm

Could you maybe add the DNS-leaks? Most people don't know off this.

This is a wonderful tutorial and I am still doing such stupid failures because I log in private with VPN.

Now I know why to use VM or VPS.

Does the VM connect to my machine?

What VM do you recommend?

Thank you xVulnerable all I read form you is very HQ!

sumatyco - February 18, 2014, 7:44 pm

This was helpful. I've been reading and learning, but haven't done anything yet. I'm glad I read this before I made a huge mistake.

Louis C.K. - February 24, 2014, 7:01 pm

using a vpn slow down internet access, becaue u r using it outside of vm, also as long as u don't do anything to be noticed by the FEDs, u will remain anonymous

padmasambhava - February 25, 2014, 10:05 am

Excellent post. Will follow these steps.

janofer - February 25, 2014, 10:27 am

Thank you. You helped me. Waiting for the next thing.

xVulnerable - March 10, 2014, 12:54 am

Thanks to everyone for all the great feedback :D

Mizuki - March 10, 2014, 1:30 am

Thanks for this TUT , You deserve a thumbps up ! ;)

reama - March 10, 2014, 1:34 am

This is a very good tutorial! Excellent :)

Xefier - March 10, 2014, 3:51 am

Err, I never used those shit while "hacking" "rat" etc.

I play with own rules. no fear

Moon Rock - March 10, 2014, 8:08 am

When you said run it on a virtual machine what kind do you recommend like settings? I don't want to have one that lags a ton so what settings would be good?

ILoveGreen - March 17, 2014, 12:39 pm

Great post i think i am now 99% Anona ;-) thanks!

xVulnerable - March 21, 2014, 10:28 am

(Mar 10, 2014 08:08 AM)Mrvinc911 Wrote: [\[CITE\]](#) When you said run it on a virtual machine what kind do you recommend like settings? I don't want to have one that lags a ton so what settings would be good?

Doesn't matter what settings. Look up some VM tutorials.

bobby dazzler - March 23, 2014, 8:48 am

What is the best vpn to use and how much do they cost ?

Kykysha - March 25, 2014, 5:41 pm

Bumping this to make sure it gets read.

The BVM - March 25, 2014, 6:00 pm

Well if i do rat someone its someone who is asking for it.

To be honest i never understood why you would want to spread your RAT to a bunch of random people.

jrunny - March 25, 2014, 6:53 pm

wonderful guide op. Most I think would be common sense but I would add using truecrypt and of course practicing good OPSEC when using any of these tools

(Feb 1, 2014 07:45 PM)xVulnerable Wrote: [\[CITE\]](#) 

Hello, today i'm going to show you know how easy one can actually get traced by RATting, even when on a VPN. Since you are viewing this thread, you may also find this tutorial interesting.

<https://hackforums.net/showthread.php?tid=3717452>

Most of you think you are 100% safe by just being on a no log VPN, think again. Do you know that if the feds wants to take down any user on HF, all they need to do is get a warrant and make Omni give them your info? By info i mean IP address, email, paypal email and any other information acquired for upgrading an account.

Take a look at this article and come back to this thread ;

<http://arstechnica.com/tech-policy/2013/09/miss-teen-usas-webcam-spy-called-himself-cutefuzzypuppy/>

See that? [Cutefuzzypuppy](#) This guy is in prison right now, dropping the soap.

Why? Because he thought that by just having a VPN is safe. (apart from being an idiot)

In this short tutorial, i'm going to give you some tips on what you can do to be 99.99% anonymous. You can never be 100% anonymous.

1. Getting a Virtual Machine/VPS

The reason i suggest using a virtual machine is because it decreases the chance of you fucking up. You will understand what i mean after reading this tutorial. Everything in this tutorial must be done from your VM! If you are going to use a VPS, make sure it's OFFSHORE with NO LOGS!

2. Making an anonymous Email.

Almost where ever you signup for an account, you are most likely going to be asked for an email. This email will be used when registering to any website linked to your RAT. Download [TOR](#) and go make a new email address. Do not use an email or password that is similar to any other username/password you have used on any other site. This email will be only accessed via TOR/VPN.

3. Getting a VPN.

Now you have an anonymous email, now you need a no log VPN.

My recommendations would be [nVPN](#) or [Cryptic's VPN](#).

Sign up and purchase the VPN, make sure you're using a shared IP. Obviously do not use real info and pay via BTC. If you want to be 100% anonymous while paying BTC i suggest you use a BTC Tumbler. Don't forget to use your anonymous email!

4. Making a NO-IP Account.

Great, you have a VPN now, connect to it once setup.

Using a VPN but giving your IP to No-ip is useless.

In this step, we are going to create a fresh no-ip account.

Head to www.no-ip.com to make a new no-ip dns.

You do not need DUC no-ip updater as long as your VPN ip is static.

If your VPN ip is not static, make sure you are connected to your VPN before using DUC no-ip updater. If DUC is running when you are not connected to your VPN, No-ip will have your real ip logged and all this work has been for nothing.

5. Setting up a JDB

If you are going to spread via JDB, you would need to buy a domain and hosting. We are going to use the same method for creating a no-ip account. First we need to find a domain registrar and host which accept BTC. I recommend www.namecheap.com and www.blackcows.net. AGAIN, you register and login on these websites only from your VM while connected to your VPN.

It is important to not host your malware on the same hosting site/domain registrar you have a legit website on.

Notes:

It is important that you do not use your VPN outside your VM. This VM must be only used for RATting, do not use it for facebook or anything else. Do not login to anywhere using your VPN, you do not want to link your VPN ip with anything.

On the other hand, make sure you always use your VPN to login to your no-ip account and VPS provider. If you are going to spread via torrents, youtube, facebook, skype or whatever...make sure you are always on your VPN while on the accounts and using the anonymous email.

These are just a few important tips to take note if you really want to stay anonymous. This does not mean you are untraceable, there are plenty of more things you can do to improve your anonymity.

This tutorial took me about an hour to write, all i ask from you is some feedback.

[img]http://static.afbeeldinguploaden.nl/1311/51238/qeDwJM.png[/img]

Excellent tips but also when you are using Paypal to pay for stuff don't be a stupid retard and pay using your real Paypal, give some cash to a kid or a homeless guy to drop in a Convenient store (if the store happens to have Security cameras) to buy you a prepaid debit card like a Prepaid American Express which can be registered online to any name whatsoever for online use then link

that Amex to the bogus Paypal boom now you have a verified Paypal using information that is non-existent or at least unrelated to you ?. (you will have to register the Amex and Create the Paypal using an Internet Cafe or stbux internet connection assuming that you don't have a VPN prior to that and you don't want to disclose your actual ip to Amex or Paypal either) Even if the feds track your Paypal and make paypal disclose your financial information (the credit card from which you paid for the RAT or other softwares) the investigation will yield nothing ? simply because you didn't even buy it in person. But if you are a serious blackhat hacker then you should kiss paypal goodbye and stick to Bitcoins and make sure to use a Bitcoin mixing service also so that your Bitcoin transactions remain anonymous (relatively) and of course you have got to have high quality Fake DVs to rent motels or rental units and relocate every now and then to reduce your risks. ??????

Regarding VPN:

Use offshore VPNs, pay for the VPN service using Electronics currency or Bitcoin.

tambov - March 31, 2014, 6:07 am

a very nice tutorial, with several useful tips, thanks

lilhoodlum - March 31, 2014, 6:58 am

awesome tutorial thank you very much will definetly help me in my future adventures an cheers to everyone for there input :)

Shashwat7 - March 31, 2014, 9:34 am

Thanks a ton man. I know guys who don't even use VPNs.

Naveen - March 31, 2014, 10:49 am

Very HQ Tutorial. A small doubt While using VM, MAC address will be same for Both OS. and What kind of ip is deff b/w Main OS and VM.

xVulnerable - March 31, 2014, 11:18 am

(Mar 31, 2014 03:14 AM)Albertozinzogat Wrote: [\[CITE\]](#) Excellent tips but also when you are using Paypal to pay for stuff don't be a stupid retard and pay using your real Paypal, give some cash to a kid or a homeless guy to drop in a Convenient store (if the store happens to have Security cameras) to buy you a prepaid debit card like a Prepaid American Express which can be registered online to any name whatsoever for online use then link that Amex to the bogus Paypal boom now you have a verified Paypal using information that is non-existent or at least unrelated to you ?. Wrong. Bitcoin transactions are public and Bitcoin is traceable.

faisca - April 1, 2014, 8:33 pm

Great info man. Thanks for taking the time to make this.

xVulnerable - May 1, 2014, 10:42 am

My tutorials need to get back up there.

Ragnarok666 - May 1, 2014, 11:15 am

thanks for your great guide helps me a lot as a beginner

xVulnerable - May 18, 2014, 1:17 pm

Updates the thread, added some points in the notes section.

xVulnerable - May 20, 2014, 5:09 am

Paranoid Blackshades users may want to use this tutorial.

RustyCl0wn - July 29, 2014, 6:01 am

Nice info I just substituted no-ip for freedns. Thanks.

Nigerian Hacker - July 29, 2014, 7:43 am

This is a very great tutorial. I will remember these tips when I RAT

xVulnerable - August 15, 2014, 6:11 pm

Added a few stuff to the tutorial. Feel free to post some feedback.

Raiden69 - September 7, 2014, 6:41 am

Thanks a lot for taking the time to write this tutorial.

Definitely a must read for anyone thats planning on RATting.

Cheers

Nikem.D ? - September 7, 2014, 10:15 am

nice tutorial , Brother . keep it up the good work .

loganste123 - September 29, 2014, 7:28 pm

What are the pro's and con's of using a VM vs a VPS?

xVulnerable - September 29, 2014, 7:55 pm

(Sep 29, 2014 07:28 PM)loganste123 Wrote: [\[CITE\]](#) What are the pro's and con's of using a VM vs a VPS?

With a VPS you're depending on the VPS company to actually not keep logs. VM is safer as you know no one is logging you whenever you connect.

loganste123 - September 29, 2014, 8:00 pm

(Sep 29, 2014 07:55 PM)xVulnerable Wrote: [\[CITE\]](#) With a VPS you're depending on the VPS company to actually not keep logs. VM is safer as you know no one is logging you whenever you connect.

But also, if you have a reputable company, you would be able to hide behind their ip aswell as your vpn.

?ikism? - October 1, 2014, 8:08 am

Can I use software like VirtualBox to create a Virtual Machine in my computer?

Nikem.D ? - October 1, 2014, 9:26 am

(Oct 1, 2014 08:08 AM)?ikism? Wrote: [\[CITE\]](#) Can I use software like VirtualBox to create a Virtual Machine in my computer?

yes, VirtualBox ans VMWare are good application .

RainbowJizz™ - October 1, 2014, 2:40 pm

I hope someone can help me.

IF i've get a dedicated server from a normal logging hoster, can i install vmware or something else to create 2 vms?

because my home internet is very slow and i would create 2 vms on this server to 'bypass' the slow internet connection with rdp. (its fast enough for rdp)

one VM for crypting, building, testing suspicious tools and the other one for ratting like OP suggests it?

when i setted up everything, should i run the vpn on the dedicated server or in the ratting VM?

would it be as safe as doing the same with my home pc?

Mr. Escrow - October 1, 2014, 4:06 pm

very nice, learned some things, thanks for the share ?

raluca90andreea - October 12, 2014, 2:14 pm

This tutorial should be in top.

Only one explication is missing. How about port? How do you solve that?

genieoutofbottle - October 12, 2014, 3:51 pm

great tutorial, all good information. Don't forget about DNS leaks.

Sir Dabbingston - October 12, 2014, 8:41 pm

This is awesome thanks so much BookMarked!

viewsonic1970 - October 22, 2014, 2:23 am

:) Thanks for sharing your knowledge once again :)

Ok please correct me if I'm wrong, but people in the EU who paid for DS RAT with PP got their homes/offices visited and their PCs took away by the authorities for analysis. This happened because the FBI got some sort of warrant that forced PP to reveal the names and addresses of everyone that had purchased the RAT through paypal.

I was then wondering if purchasing a crypter should also be done with BC instead of PP. Would the purchase of a crypter with PP attract any unwanted attention? Thanks

xVulnerable - October 22, 2014, 2:37 am

(Oct 22, 2014 02:23 AM)viewsonic1970 Wrote: [\[CITE\]](#) :) Thanks for sharing your knowledge once again :)

Not necessary but for full anonymity, yes.

ThatCoderX - October 22, 2014, 7:26 am

I like the tutorial ! And everything you provided / recommended works great !

Also, I wanted to add, spreading is also pretty bad. If you spread in the wrong places, and use personal information on forums and such, you can get caught. I've seen it happened! So be careful guys!

viewsonic1970 - October 23, 2014, 3:34 am

The No1 Rule should be that Paypal should never be used to pay for anything where your anonymity is important, yet I see jrat still use it for payment, surely this is asking for trouble after what happened the last time.

I am still uneasy posting in HF sometimes, cause I know they are watching

StayZoned - October 27, 2014, 12:15 pm

Nice tutorial, really easy to follow and simple. Thanks

Water Aura - October 27, 2014, 12:44 pm

Nice tutorial, helping dah noobies out (avoiding legal issues a sly way.)!

VladimirPutin - November 20, 2014, 1:18 pm

will i be able to use the interface on mac OS X/ through wine?

hanshanshans - December 18, 2014, 1:23 pm

so first thx for the tut!

I summarize, create a virtual machine with virtual box, buy a vpn, and maybe a vps (2x4.ru?). ISP --> VPN --> VPS or is ISP --> VPN enough? To prevent dns leaks, use dnscrypt? What could still leak? Is it a good idea to use tor? ISP --> TOR --> VPN?

NextGenHacking - January 19, 2015, 12:46 pm

Guys relax feds are watching yes just don't do anything that will get their attention

Also this rat thing of people searching your computer etc is fine now because the rats have terms and conditions which state certain things. Also don't use it for illegal things like spying on girls like that idiot in this post and then blackmail them because you sure as fuck will get caught. In no way do i or anybody on this forum condone illegal actions and if those are brought to the surface then you are sure as fuck stupid and deserve to get caught

DarkReality - January 19, 2015, 9:47 pm

Nice tut dude, However I heard that no-ip will give you to the feds if they ask.

woahxx - January 19, 2015, 11:11 pm

But No-ip gives information to the cops...

striker26591 - January 22, 2015, 5:40 am

This some neat and straight forward TuT bro! ? hats off to ur effort to make it simplistic and noob friendly.

_AtomicLunchBox - January 25, 2015, 12:23 pm

vouch. starting to learn how to RAT. I'll keep this in my notes :)

Rap!st - January 31, 2015, 9:49 am

Really Nice tutorial, Thanks alot.

Rapist

bonevirus - February 15, 2015, 3:41 am

Nice tut mate very nice indeed :) i am very confidant this will be usefull

Ainan007 - February 15, 2015, 7:32 am

How do i get BTC?

Do I buy it? Transfer it?

biscuit deluxe - February 16, 2015, 10:18 pm

thanks for this tutorial, it heelps

defrun - May 7, 2015, 6:12 am

Thanks man, this was a great help, very useful info!

MAtch335 - May 7, 2015, 7:39 am

Great, thanks a lot, I really need this XD

hercules600000 - May 8, 2015, 2:27 am

yo ex ...ive been hitting u on skype and u aint seem to respond,,, we have a deal to seal up.. about setting up a RAT and tutoring,, please hit me up on skype lets finalize as i am ready to do business with you now

123aiden123 - May 8, 2015, 3:37 am

Are you a talented Ratter? PM me your email for an awesome (anonymous) TV opportunity.

hercules600000 - May 8, 2015, 7:10 am

its ikoi.ferdinand ... thats my skype cant pm now...

Mcbride - May 8, 2015, 8:12 am

Great tutorial OP, thanks for sharing

HotSenpai - May 27, 2015, 2:03 pm

Thank you very much for all of this information! I am looking forward to purchasing some of your services very soon!

SIM-2212192 - May 27, 2015, 11:19 pm

Saw this near the top - bringing it back there. This is some of the most valuable information for all of you new ratters.

Actually, THE MOST important.

highAtNight_ - May 27, 2015, 11:45 pm

Is it me or is the image not loading? I'd be glad if you'd send it out to me - for some stupid reason I won't get it working. Thanks in advance, I'm sure it will help a lot of people.

Travis Scott™ - June 3, 2015, 3:55 am

have you deleted this? cannot view any information in this thread.

xVulnerable - June 3, 2015, 8:16 am

Thread is temporarliy removed.

Tehking - June 3, 2015, 10:03 am

Ew,Any Idea If This Thread Gunna Come Back ?

CiteUhDale - *September 3, 2015, 2:23 pm*

I was very much interested in reading this for the first time... Any new link?
