Thread: [Tutorial | Clear Event Viewer \(All System/Network Logs\)](#)

NoodleBot™ - February 1, 2014, 10:31 pm

Got a LOT of requests for this after mentioning it on a thread somewhere for somebody.

So here it is. The extremely useful and anti-forensic batch code.

Proof:

Before: As you can see, over 4600 logs in one area alone (Security)

After:

```
Quote:@echo off
FOR /F "tokens=1,2*" %%V IN ('bcdedit') DO SET adminTest=%%V
IF (%adminTest%)==(Access) goto noAdmin
for /F "tokens=*" %%G in ('wevtutil.exe el') DO (call :do_clear "%%G")
echo.
echo goto theEnd
:do_clear
echo clearing %1
wevtutil.exe cl %1
goto :eof
:noAdmin
exit
```

If you don't know what to do beyond this point.. ?

Save it in notepad and name it whateveryouwant.bat and then you may enjoy some privacy. I run this one a week + injunction with CCleaner DAILY.

Example:

Null Byte - February 1, 2014, 10:41 pm

This is good, but you could just turn off event logging so nothing will be recorded in the first place. Also please add spoilers :P

It would still record about 80% of the logs there, as they are not displayed on event viewer.

Noodle, you and your batch scripts for Windows eh ?

Jagster™ - February 2, 2014, 8:44 am

nice code mate, but quick question:

Cant you just use CCleaner to remove these logs? I have an option for "Windows Events Logs" to be removed.

Ty it yourself and see what it cleans.

Cleaner is the worst anti forensic tool in history. It's a cleaner.
