Thread: [Flashing Lights](#)

Jack_Soff - February 2, 2014, 8:14 pm

Can someone tell me the keyboard commands for the FN key and the Esc key

I'm trying to make a bat file that makes my keyboard flash colors and the way you change the colors is the Fn key and the Esc key. I know how to do it I just need the key codes

Thanks ?

Nakamoto. - February 2, 2014, 8:15 pm

There are no key codes for any keys in batch, although this could be done with numbers letters or symbols using the choice command.

```
WshShell.SendKeys "{ENTER}"
```

That is not batch though, not sure what that is. VBS maybe?

Depends, are you wanting it in only batch and if so can you use other keys besides the two you listed?

Well with batch you could do

```
Code @echo off&title Colorful
```

```
:loop
```

```
choice /c 12 >nul
if %errorlevel%==1 color a0
if %errorlevel%==2 color d0
goto loop
```

choice /c 12 >nul
if %errorlevel%==1 color a0
if %errorlevel%==2 color d0
goto loopI don't know why but it didn't work

How does it not work? Lol. Save as .bat. Open. Press 1 or 2. Easy.

Slapyournet - February 2, 2014, 9:33 pm

I think what he means is for his keyboard to flash colors not the batch file itself. -> "makes my keyboard flash colors"

That sounds more like a hardware issue than a software issue. He'd have to have colored LEDs built into his keyboard, rendering this thread beyond useless.
