Thread: [\[Tutorial\] A way to protect yourself from Keyloggers.](#)

Rap!st - February 3, 2014, 2:18 am

Note that this is just one of the plenty ways to protect yourself from keyloggers in case you're being infected by someone.

Difficulty: 1/10

- Requirements Administrator priveleges

Key Scrambler

- Download Links

[KeyScrambler](#)

[Zemana Antilogger](#)

- Description

KeyScrambler, a well-established anti-keylogging program, encrypts your keystrokes in real time to prevent information theft by keyloggers and keylogging malware.

- Information

KeyScrambler offers 3 different Packages. There's a free package and 2 paid Packages including more features. It's your choice which one you'd like to use.

Package Features:

Spoiler [\(Click to View\)](#)

Keyscrambler is one of the best protection against keyloggers that you can have, Keyscrambler is a small program which encrypts your typed keystrokes so even if the victim has installed a keylogger on your system, he or she will get encrypted keys as result.

Keyscrambler currently supports applications such as Firefox, Internet explorer and some other applications, however its premium versions supports more than 160 different applications and better features.

Extra tool:
