Thread: [BotNet Setup || Precision's Tutorial || Setup PlasmaHTTP on a Windows VPS](#)

Precisio? - February 3, 2014, 11:04 pm

Hey guys, this tutorial took me many hours to make, and it's really detailed and I think everyone can follow it.

I can make this tutorial for Linux VPS too, but it depends on comments and feedbacks.

In this tutorial I will teach you how to setup PlasmaHTTP on a Windows VPS, actually many HF members have problem with it and cannot do it themselves and have to pay many \$ to another person to set it up, so if you want to learn how to do it yourself, stay with this tutorial. I will go in deep and teach you how to make everything ready!

To setup PlasmaHTTP and any other BotNet on a Windows VPS you will need the below list:
Windows VPS

VPS is Virtual Private Server. We need this for hosting our BotNet panel/files and being as our DNS.

DNS is Domain Name Server.

A Domain

Any domain with any name you wish is required, it will be your BotNet web address and slaves will redirect into it.

WampServer

Which will install PHP, Apache, Mysql on your VPS.

ionCube loader

It's a loader for ionCube encoded files and will be required by PlasmaHTTP, not all BotNets.

PlasmaHTTP or your BotNet files

Now Let's Go!

1.1. At first, you need a domain with any name you wish (Example: yourdomain.com). You can buy it or get it free by some free domain providers. I will register a domain at dot.tk which is free and is good for tutorial! But I recommend you to buy one instead. In this tutorial I will register a domain as "precisiondomain.tk".

You have to edit your domain with the following DNS settings: Name Server 1:
"ns1.yourdomain.com" "Your VPS IP"

Name Server 2: "ns2.yourdomain.com" "Your VPS IP"

Spoiler [\(Click to View\)](#)

1.2. Now you have to enable DNS rule in your Windows (VPS), to do this follow the gif animation:

Spoiler [\(Click to View\)](#)

1.3. We have a domain and also enabled DNS rule on our VPS, now we should setup our domain on our VPS, follow the video:

Watch in FullScreen [\(Click to View\)](#)[Video: <http://www.youtube.com/watch?v=2Zz9SB5GxmK>]

2.1. Go to <http://www.wampserver.com/en/#download-wrapper> and download suitable "WAMP SERVER" package including PHP for your VPS Windows.

If your Windows is 32-bit, then download below package:

[WAMPSERVER \(32 BITS & PHP 5.4\) 2.4](#)

If your Windows is 64-bit, then download below package:

[WAMPSERVER \(64 BITS & PHP 5.4\) 2.4](#)

You must install Visual C++ 2010 SP1 Redistributable Package x86 or x64 to run WampServer. Download suitable version from below links:

VC10 SP1 vcredist_x86.exe 32 bits: <http://www.microsoft.com/download/en/details.aspx?id=8328>

VC10 SP1 vcredist_x64.exe 64 bits: <http://www.microsoft.com/download/en/details.aspx?id=13523>

2.2. Now you need to install and configure WampServer on your VPS, and make a database for PlasmaHTTP in order to setup it. Just watch the video carefully!

Watch in FullScreen [\(Click to View\)](#)<http://www.youtube.com/watch?v=u9OJQmQcCDw>

It's a loader for ionCube encoded files and PlasmaHTTP needs it to be installed on your host. To do this, go to <http://www.ioncube.com/loaders.php> and exactly follow the video.

Watch in FullScreen [\(Click to View\)](#)http://www.youtube.com/watch?v=oy38Z_Y_97g

Just watch the video, can't say more!

After installation completion, make sure to delete "install.php" from your panel directory.

Watch in FullScreen ([Click to View](http://www.youtube.com/watch?v=dII_wLMBbfl))http://www.youtube.com/watch?v=dII_wLMBbfl

That's it. If you have any question or any problem/issue just ask me and I will help you.

LethalNET - February 4, 2014, 6:37 am

WOW! just WOW this tutorial is just amazing man, Great contribution to The Empire General Hacking section!

Hats of to you, You deserve a cookie c:

BlueMask - February 4, 2014, 6:45 am

Thanks Precisio? will maby use this to setup my own botnet :) i like that you explaine everything detailed step by step

Ninja. - February 4, 2014, 7:32 am

Nice, I will try this out. ow and your Ip is showing in the last video. just saying

revv - February 4, 2014, 8:20 am

cool will try this whenever I get plasmahttp

Seer - February 4, 2014, 8:23 am

Very awesome and well put together tutorial! Hopefully this helps out a lot of individuals with their botnet setups.

Precisio? - February 5, 2014, 10:49 pm

Thank you guys for all your kind words, means allot to me.

I don't think you can find such a this tutorial, very detailed and step by step.

S.Girl - February 5, 2014, 11:07 pm

Nice, thanks for the tuto :D

XtaZ.

Machete Kills - February 6, 2014, 12:34 am

Very awesome and well put together tutorial!

DeathRoot - February 6, 2014, 12:43 am

very Great tut, i can use its tut learning ;) thx dude

LorenzoHacks - February 6, 2014, 9:42 am

looks very nice bro not gonna use itt

IIMachavelli - February 6, 2014, 9:44 am

Nice design for a tutorial Precisio?l.

rockat - February 7, 2014, 6:10 am

thanks man you rock.. very usefull tutorial keep it up!!!!!! ;-)

Precisio? - February 7, 2014, 10:08 am

I'm glad this tutorial helped you, might make one for Linux VPS if I get cool feedback.

Badge - February 7, 2014, 11:58 am

Very High quality thread keep it going bro!

-overtaken

The Bredstick - February 7, 2014, 10:42 pm

This is a very HQ thread, I'm very impressed. Worth the read for sure.

ashwinisCOOL - February 8, 2014, 12:12 am

TJNK YOU!!!!!! thank you that's all I can say and btw your ip is shown

CyBER_JeDi - February 12, 2014, 3:24 am

Awesome tutorial - nicely set out as well!

G^NNicus - February 12, 2014, 3:33 am

Well explained tutorial, very HQ !!!

Thumbs Up !!! I think a Linux tutorial will be very beneficiary to !

Well done

Strikershocks - February 12, 2014, 6:57 am

It's a well put together tutorial thanks for sharing it :)

It's a HQ tutorial very great work ;)

Precisio? - February 12, 2014, 11:19 pm

Thank you guys for your feedback, it's nice to see you know my tutorial HQ.

ChapTs - February 13, 2014, 9:34 am

Great one, I just kinda missed some pictures :)

Tomorrowland - February 13, 2014, 11:01 am

Alright I did everything your video showed for setting up the WAMP Server, the only thing I had to change to make my icon in the tray bar, green was the port. Instead of port 80 I'm using port 81, Which I was able to change via the httpd, it's a config that allows me to change the port, The issue I'm having now is when I start the server up, and visit localhost, It's just white.. a blank page. Anyone know what I need to do to fix my issue?

Precisio? - February 13, 2014, 11:46 am

Anyone know what I need to do to fix my issue? Which version of Wamp Server you installed? What's your Windows version?

Sent you a PM, reply asap.

Tomorrowland - February 13, 2014, 3:45 pm

Huge thanks to my man Precisio?! Glad to see you giving back to the community again, Great Tut, Looks like it took you some time to make, Enjoy the Rep man!

Nujab3s - February 15, 2014, 12:44 am

very nice tut , look forward to seeing your next tut , very good for the beginners .

hansbald - February 15, 2014, 7:28 am

Amazing! But it would be so nice for Linux too :)

I mean Linux VPS are so much cheaper compared to windows VPS :)

Precisio? - February 15, 2014, 11:25 pm

Will make same tutorial for Linux and a Host also, give me some time, I'm busy.

G^aNNicus - February 16, 2014, 4:22 pm

(Feb 16, 2014 12:25 AM)Precisio? Wrote: [\[CITE\]](#) Will make same tutorial for Linux and a Host also, give me some time, I'm busy. Awesome looking forward to it ?

Panatkorn - February 16, 2014, 6:46 pm

Thanks!! Now i can start doing some botnet

manhast - February 17, 2014, 12:31 am

great tutorial very ;) thanks very much

Sir Robert Bryson Hall II - February 19, 2014, 11:29 am

Could you do this possibly for linux or centos

Assuredness - February 19, 2014, 11:40 am

Great thanks just setup myown botnet in like 20 min

TheOne94 - February 19, 2014, 1:51 pm

Excellent tutorial clean and simple.

Good work dude!

Precisio? - February 20, 2014, 10:27 pm

Thank you guys for kind words, I'm glad you like my tutorial.

Prani - February 25, 2014, 11:05 am

very Great tut, i can use its tut learning ;) thx dude

mansome333 - February 26, 2014, 1:25 am

Where can you get the bots for the botnet?

toolsno1 - February 26, 2014, 2:28 am

nice tut. thank you 4 share. Thank so much.

Tromboner - February 26, 2014, 4:32 am

This is possibly the best botnet set-up tutorial I've ever seen on this website. Good Job OP, keep up the good work!

SHADOW REALM - February 26, 2014, 4:36 am

Great tutorial. But windows. Plz make it stop. I've never installed Plasma but it's gotta be easier on a Nix VPS

wget <http://plasmafiles.com>

Go to /install.php (or whatever)

and done

samrokzz - February 26, 2014, 9:01 am

Nice tutorial , Thanks for the share .

hackercomienza - February 26, 2014, 8:00 pm

muchas gracias esta muy bueno el tutorial

Precisio? - February 27, 2014, 7:47 am

(Feb 26, 2014 02:25 AM)mansome333 Wrote: [\[CITE\]](#) Where can you get the bots for the botnet?You should spread your bin to get bots, or you can buy them, there are some bot shops on HF, search for them.

(Feb 26, 2014 05:36 AM)SHADOW REALM Wrote: [\[CITE\]](#) Great tutorial. But windows. Plz make it stop. I've never installed Plasma but it's gotta be easier on a Nix VPS

wget <http://plasmafiles.com>

Go to /install.php (or whatever)

and doneYes, I know, but it's the way how I start it, I will make one for Linux too but have no time for it right now.

aliencyber - February 28, 2014, 2:52 am

Nice tutorial, helps a lot. I was stuck for while. thx mate

cryptoman - March 2, 2014, 12:28 pm

Great tut..Helped me a lot..Thanks dude!!!

TheDanishMods - March 3, 2014, 7:37 am

Nice, I will try this out. Thanks for share :D

Precisio? - March 24, 2014, 9:47 am

Bring this awesome tutorial to top so you can learn from it!

Cyph3r90 - March 27, 2014, 12:22 pm

Thaks a lot Precision.

i have install my httpplazma on a centos vps but when i start the bin i cant see any victim in my panel !!

G^NNIcus - April 11, 2014, 5:16 am

This tutorial needs another !!!

This is truly one of the best HQ tutorials i have ever seen
?

El_Xexus - April 11, 2014, 10:34 am

It will be helpful for many,thanks for sharing.

tftoolz - April 27, 2014, 2:27 pm

Nice, I will try this out. soonest... thanks for the share

EREB0S - April 28, 2014, 4:00 pm

This has helped me a lot!

But three things have struck me.

First:

When you have windows 64-Bit, ioncube loader did not work.
Actually there is no ioncube loader Version working on win 64-bit.
So you must download wampserver for 32-Bit OS ! (Than it works)

Secondly:

On this clip on 2:17 min -> <http://www.youtube.com/watch?v=2Zz9SB5GxmK>
You can't set Alias CNAME - There is a ERROR. (Only on a windows server 2008 (XP) VPS)
But it's ok. The bot works fine without this.

Thirdly:

Now to my problem that I could not solve. I think it's a really NOOB problem. :D
The files ending with ".files" for example:

CPUMiner.files
jhProtominer.files
YACMiner.files

Also, all the miner files.
I can't see this files on my VPS.
I download the files and see nothing on my VPS (win 2008 server)

I have unchecked the "hidden files" - options for windows folder options and system files.
but that has not helped.

Anybody an idea? :D

Durability - April 28, 2014, 5:50 pm

Nice, I will try this out. ow and your Ip is showing in the last video. just saying

Precisio? - May 15, 2014, 12:57 am

Let me know guys your opinion about this tutorial,
Ask me if you have any question.

©**Ratatouille™** - August 5, 2014, 8:46 am

(May 15, 2014 12:57 AM)Precisio? Wrote: [\[CITE\]](#) Let me know guys your opinion about this tutorial,

Very very good tutorial
Big thank for fix the .gif ;)

omotow - August 10, 2014, 9:49 pm

cool , I will try this out . thanks

CardiacArrest - August 11, 2014, 1:00 pm

wow really HQ thread, amazing! :) !

Talu - August 11, 2014, 3:09 pm

Great tutorial, I'm sure many people will find this useful.

vastscorpia - August 11, 2014, 3:28 pm

Thanks so much for this! I have been looking everywhere for a good tutorial on botnets

jeffmark120 - August 18, 2014, 1:48 pm

Precisio? pls can you pm your skype or yahoo.... need to chat with you

Ombree - January 11, 2015, 7:43 am

Amazing tutorial, posting to bookmark it!

SithLee - January 11, 2015, 11:37 pm

Wow, great tutorial, nice and HQ, simple and on point.

Not trying to be a grammar nazi, but on step 3 you spelled install wrong, must be a typo.

xRoyalHD - January 16, 2015, 11:35 am

Its a well put together tutorial thanks for sharing it :)

Its a HQ tutorial very great work ;)

RootUserAdmin - January 28, 2015, 9:16 am

Thank you for the awesome tutorial, taught me alot!

Munchy - April 26, 2015, 3:33 am

nice tut man well put together making it easy for ppl to follow :)

R3FACTOR - April 26, 2015, 5:26 am

Personally I would love a tutorial for Linux, it would be really beneficial for me and the community.

Precisio? - April 26, 2015, 9:56 am

(Apr 26, 2015 05:26 AM)R3FACTOR Wrote: [\[CITE\]](#) Personally I would love a tutorial for Linux, it would be really beneficial for me and the community.

There's many tut about Linux, but I want to show how to use Windows.

Sta.ze - April 26, 2015, 3:00 pm

This is a nice tut. I don't understand the name server part. ns1.yourdomain.com // why did you say 'your vps ip here'?

ANON.PURGED - May 8, 2015, 6:22 am

Where is the download of Plasma HTTP + Builder. Thanks!

BI?c?OuT - December 18, 2015, 7:33 am

Good, Thanks man ?
