Thread: [100% Private Codedom Crypter Source - Private RunPE and PEB Patch! Unknown methods!](#)

asillychilly - February 3, 2014, 5:50 pm

Both sources are in VB.NET

They are both guaranteed to be efficient and original. They were written using critical thinking and originality.

You can buy both for 65\$

NOTE: NEITHER SOURCE IS NOT FUD. I'm merely selling these sources as they are still pretty creative in the way me/my partner coded them. Not to mention the PEB/Runpe's are still private as I'm the only one that has them. (Custom coded for me ONLY by aeonhack)

NOTE: The crypter was originally a basic crypter that Mr. Anderson gave to me. IVE ADDED A TON OF FEATURES SO BEFORE SAYING ITS PUBLIC LOOK AT THE SCREENSHOTS. Not to mention the Crypter has custom RUNPe/PEB Patches custom coded by Aeonhack for me.

Crypter Source - 65\$ - 0/3 SOLD]

Source Details [\(Click to View\)](#)

FULL RESALE RIGHTS:

COPIES SOLD: 0/3

The PEB Patch was coded by Aeonhack, and costed 100\$ alone

The runPE was by Mr. Anderson and costed 30\$ alone

The HWID licensing system costed 20\$ alone

Many of this crypter's features haven't been seen before.

You can buy this source for 65\$

Compiles via CodeDOM

Built in USG

Coded from scratch

Originally coded in F#, but has been flawlessly converted into a VB.NET Project

99% Infection RunPE (x32, x64) VERY STABLE

Tons of features

Already added, and paid for HWID System

You will receive the HWID Files, and instructions so that you can manage licenses.

Crypter is private, and bins have never been sold before.

Delayed Execution

4 Strong Encryptions

SEXY GUI

Encrypted RunPE on build

Manage processes to kill on runtime

Flawless fake message on runtime

Startup, with advanced persistence

Working extension changer

Unlimited FUD Downloader, and FUD Binder
Unlimited hosts manipulation (block websites for the slave)
Assembly changer, with random generated strings
EOF
Double encryption
Never before seen PHP Method to ensure tiny output server, and maximum FUD rating.
Icon changer
Melt Function
UAC Bypass
Hide File function
Make input file a system file
Disable CMD, Task manager, and firewall
Randomize variables on build.
Disable registry, and sys restore
Restart PC option
Inject, and drop file to drive options on Runtime
Inject into VBC, Explorer, or SVCHOST
Inject or drop, binded file
Advanced USG
Algorithm key is generated in a stable method using 10+ different languages to ensure a strong encryption.
Private methods!
+ WAY MORE

You know how to refud a source crypter ?

Tastylicious - February 4, 2014, 7:13 am

PM me as soon as you are unbanned, thanks!

Yes? I'm not sure how my abilities to reFUD a source are pertinent. This source was FUD when I originally planned on selling the crypter as a product.

reFUDing is not hard, it's not rocket science.

I'm sure most of the people interested in purchasing the source have the ability to reFUD it.
