This is available for free on the MS web site. Plus doesn't the ultimate version require a key?

This is highly possible the beta or the release candidate version and not the release version.

If you have an email with a recognised educational establishment you can get Pro legitimately via Dreamspark.

The Tklso release of Ultimate was on newsgroups a fortnight ago -- Autorun.exe was infected JS/Exploit.Pdfka.NWV.trojan and Win32/Spatet.C according to eset, and AVG came up with soomething too. This torrent sounds like the same release...
