Thread: [Keylogger detected by antivirus](#)

matty9 - February 4, 2014, 2:23 pm

First of all I'm not sure this should go under c++ or keyloggers but anyway, my antivirus (AVG) is detecting my keylogger and obviously I don't want it to. It detects that it copies itself to the temp directory and also detects that it adds itself to the registry for startup programs, is there anyway to stop this? Will a crypter work or even if the crypter's FUD the antivirus will detect that it recognized the behavior? Another thing it detects is that that it send an email of the keys (not as an attachment atm).

```
Code if(!RegOpenKey(HKEY_CURRENT_USER,
TEXT("Software\\Microsoft\\Windows\\CurrentVersion\\Run"), &key) != ERROR_SUCCESS) {
    RegSetValueEx(key, TEXT("Keylogger"), 0, REG_SZ, (LPBYTE)ss2.str().c_str(),
    strlen(ss2.str().c_str())*sizeof(char));
}
```

Thanks

InspectorGadget - February 4, 2014, 2:25 pm

A crypter will solve this. The crypter must be FUD.

matty9 - February 4, 2014, 2:28 pm

Thanks! And how would you go about making a crypter? I would make one myself if I can as I'd like one built in to the builder.

Lol a crypter isn't that easy to make. If you're a starter you're better off buying one.

Most FUD crypters you have to pay for, that's why I want to make my own, I'm currently researching it.

Infinity Lord - February 5, 2014, 12:51 pm

Use a crypter and you wont have this problem

Pseudocode - February 5, 2014, 1:23 pm

You have a very odd way of adding it to the startup of the user account. Either way, you will get more help in the .Net section. This is in the wrong section technically.

matty9 - February 5, 2014, 1:35 pm

Okay, thanks for the help guys, I appreciate it. And btw it's not .net.

erik122003 - February 7, 2014, 7:19 pm

wish i could find a crypter even to buy lol still trying to get my post number up with out just writing junk. If any one knows of a good one please let me know so when i can get it i will thanks

Asura123 - February 15, 2014, 1:23 pm

Can you not get your anti virus program to allow that one file?
