Thread: [Proxy Shark Tutorial \(Scrape\)](#)

Who Soup - February 4, 2014, 2:49 pm

Hey everyone, Today I'll be showing you how to use Proxy Shark which is a great tool that will help you get a constant supply of fresh proxies. If you didn't download it already please check out my other thread (it's completely free to get)

<https://hackforums.net/showthread.php?tid=4041930&pid=38144802#pid38144802>

Lets begin?

Vocabulary:

"Scrape" - Getting data from a website

"Proxies" - if you don't know what this is please research what a proxy is and come back.

"Threads" - amount of data allowed to process at one time.

"Source Key" - The program looks for this "Text" in the source of a website the user sets to check if the proxies are valid or not.

First I'm going to show you how to "Scrape" proxies.

so open up proxy shark and you will be given two options scrape or load list.

[img]http://s28.postimg.org/c2cqzp8j1/Capture.png[/img]

So type

Code 1 and press enter [Note: Press enter after any command]

It will then ask you to select sites

because we're awesome, we're going to scrape them all! If you'd like to just scrape one of those sites type in just 1 number

So type:

Code 0,1,2

[img]http://s9.postimg.org/rxl0jl1lr/image.png[/img]

It will then begin to scrape from those sites. This may take a few minutes/seconds (Depending on your internet connection and computer).

[img]http://s30.postimg.org/72vu580ox/image.png[/img]

Next it will ask you for a website. This is to check the proxies, to see if they respond or not.

I use:

Code <http://www.kkk.com>

Next it will ask you for a source key. This is what the program will look for on the website of your choosing to see if the proxies are able to see it or not. It is case sensitive so make sure it's correct, if you get a bunch of invalid proxies chances are the website you chose is down or your key is bad.

For KKK.com I use this source key:

Code Knights

It will then ask you for Threads. This in very basic terms allows the program to check the proxies faster/slower.

I'm running an I3 processor on 8 gigs of ram so I normally set it to:

Code 1000

running 1000 threads, it normally uses 5% of my CPU for my computer. This all depends on your computer speed. If you're not sure run it at either 100 or 500.

the next thing it asks for is a thread startup delay. this allows a delay before the next thread starts. This isn't necessary right now to do, but will be used later on in future updates.

Please set this value to 0

Next it will ask you for a timeout. This is what filters the proxies by speed. If it responds with in the time that you put it will add it to the list otherwise it won't be added.

For my use of the proxies I set it at:

Code 10Which is a fairly standard speed for normal use of proxies.

Lastly it will ask you for Port Block Strings. This will remove proxies from the list that contain these proxies.

I normally remove these ports because I was told they track data.

Code 312,0000,443

Alright now press enter and let the magic happen!

It will now begin scraping and checking the proxies to see if they are valid. as you see on the top we have TP, C, CPM V and VPM

Code TP: [Total Proxies]

C: [Checked]

CPM: [Checked Per Minute]

V: [Valid]

VPM: [Valid Per Minute]

Once "C" is equal to "TP" (This may take a little while, please give it some time) a .txt file will be created where you have the program. It will be called ValidPoxies.txt

Congratulations, you just scraped anywhere from 500 - 1000 proxies for free on only a few minutes ?

Common problems:

It's not exporting a list at the end: Run the program as an administrator (right click>Run as administrator)

I'm receiving only invalid proxies: There could be a few things that could be wrong, here are some common mistakes:

- check your internet connection to see if you are connected to the internet.

- Make sure the website you are using is valid/not offline.

- Check to make sure your source key is correct.

It's not opening: Make sure you are running this application on a Windows XP or higher operating system.

This program is still in it's BETA form, we hope to take this program to an amazing point. Please let me know if you have any suggestions or questions. Thank you guys for the support?

-Soup

Jagster™ - February 4, 2014, 3:12 pm

Very nice, I am using this right now.

Keep up the good work :)

EDIT: is there a way to Dump the list into a .txt or something?

Or a copy and paste would be useful also.

Who Soup - February 4, 2014, 3:21 pm

EDIT: is there a way to Dump the list into a .txt or something?

Or a copy and paste would be useful also.

It automaticly does it at the end, it takes some time to finish checking the proxies. the number on C should be the same as TP

Jagster™ - February 4, 2014, 3:23 pm

ok great, yah mine is still going lol :)

thanks for this :) I am always in need of huge proxy lists :P

Master - February 5, 2014, 5:36 pm

Very nice app. Whoever made it must seriously know threading. I sniffed the connections. No suspicious outgoing connections. Definitely clean and very useful.

Who Soup - February 5, 2014, 10:00 pm

Thanks storm. The programmer is really good, hard to work with some times but hes a good person, and creates amazing apps, I'll get you in contact with him if you want

? ??G??oy ? - February 7, 2014, 8:25 am

Very Very nice workk !!

I like it !!

Heroiik - February 7, 2014, 9:01 am

Good work man, continue !

I like it !

Mr. Wallstreet - February 14, 2014, 8:38 pm

Edit - i found what i was looking for so never mind

JeRM - February 24, 2014, 2:43 pm

Well I spoke to soon :(

I'm receiving and error when trying to extra the file...is "ilovesoup" still the correct password?

Telling me it is invalid win32 application.

Cryoplex - February 27, 2014, 9:07 pm

I have a strange feeling [this](#) is going to take a while. T.T

Who Soup - March 1, 2014, 4:44 pm

hey sorry, I didn't know people were still using Proxy Shark because it simmered down for a long time. some errors concerning "invalid win32 application" could be either:

1. You are trying to tamper with the program in which case it destructs
2. You don't have .net framework 4.5
3. You don't have over 1g ram to support this program.

I hoped this helpe, if not please feel free to PM me or post!

Thank You guys for the response, sorry again my responses were slow I didn't know people cared about this still!

Much love ?
-Soup

JeRM - March 2, 2014, 6:46 pm

Awww :(I realized I don't have .NET Framework 4.5 because I'm on WinXP DUHHHHH

I don't recall you stating this would be a Win8 application :'[

Damnnnnn this is the first program I've seen not work for WinXP

kamrulahsan06 - March 4, 2014, 10:20 am

Amazing works! Thanks a lot for giving this tool freely :D Thank you

Damnnnnn this is the first program I've seen not work for WinXP

Sorry, The updated version is XP compatible. This is only a test to see what the demand for something like this is.

No problem Kamrulahsan06, We're going to be constantly releasing some pretty crazy free programs, and if it's paied, a very very modest price

Members only - March 8, 2014, 7:21 pm

Great thread, I even found this useful ?

blacksubmarine - March 9, 2014, 6:31 am

Great, good work. THANK for this bro.

Who Soup - March 9, 2014, 7:50 pm

No Problem, we will be releasing a update very soon that I think ya'll will like

Landon042 - March 11, 2014, 9:01 pm

what do I do once I get the list and its finished

Who Soup - March 12, 2014, 12:28 pm

(Mar 11, 2014 09:01 PM)Landon042 Wrote: [\[CITE\]](#) what do I do once I get the list and its finished
You enjoy the proxies!

because it's finished (it should be called ValidProxies) it exports the list to where ever proxy shark is located.

BojoHKs - March 15, 2014, 4:44 pm

Thanks man nice share will come in handy

Just Another Ninja - March 28, 2014, 6:55 am

It seems like it cant scrape proxy nova at the moment :(

Who Soup - March 29, 2014, 6:37 pm

(Mar 28, 2014 06:55 AM)JustAnotherNinja Wrote: [\[CITE\]](#) It seems like it cant scrape proxy nova at the moment :(

Thank you for letting us know about this error, we are working to get it fixed as soon as possible, we will be releasing a paied version soon that will have this fixed.

we are deeply sorry for the inconvenience

-Soup

Speed Test - March 29, 2014, 7:37 pm

Amazing app you have here. +1 op! This app is going to be very useful for me.

Who Soup - March 29, 2014, 9:04 pm

If you'd like a proxy shark signature, here is one Gimmie_Ur_Cash made. Thank you for this signature!

Code

Randomness18 - April 2, 2014, 7:08 am

looks verry nice man, thnx for this.

gfool - April 9, 2014, 12:58 am

Both Proxy Nova and Proxy Lists crash the app when attempting to scrape.

Other than that, program works great.

Master - April 26, 2014, 9:48 pm

Damnnnnnn this is the first program I've seen not work for WinXP
.NET Framework 4.5 runs on XP, Vista, 7, and 8.

Airstrike - April 26, 2014, 10:01 pm

Good work using this for know. Keep up the good work bro.

Mangox3 - July 1, 2014, 4:56 am

Good work man, continue !
I like it !

Hastur - July 1, 2014, 5:16 am

Thanks for this work man!
Keep up the good work and have a nice day :)

Talu - July 1, 2014, 5:36 am

Great job, OP. Keep up the good work.

Solomon Grundy - July 4, 2014, 12:51 pm

just abt givin this a shoot.....will give review when done

Albion - October 14, 2014, 2:45 pm

Is there any way of limiting how many proxies it can grab?
Would love that as a feature for the final version :)

Little bit of bother whilst trying to use it.

Don't scrape proxy nova in this version ?

woms - October 15, 2014, 7:23 am

Thanks a ton, I'm in need of proxies so this is perfect <3
ty ^^

(Oct 15, 2014 02:11 AM)Who Soup Wrote: [\[CITE\]](#) Don't scrape proxy nova in this version ?
Was working a little while before that though :P
Little data parsing glitch I guess?

LynS - October 15, 2014, 10:25 am

Very Nice Really Helping me Out ?

tosher1011 - December 13, 2014, 11:09 pm

Will not complete testing all of them 5 get left out.

Who Soup - December 17, 2014, 12:33 pm

Thank you for all of the positive support ?

JasonCharged1 - *December 29, 2014, 10:57 am*

looks like a great program but it keeps generating "bad" proxies. regardless if scraped from within the program or if loaded from a previous proxies.txt file. already looked at your common 3 problems but they didnt fix it.

any ideas?

thanks

mittchell19128 - *January 12, 2015, 1:27 pm*

thank you i will try this ASAP!

thank you again!! regards
