Thread: [\[Spreading\]Download a exe through google link](#)

NitroSmily - February 5, 2014, 8:30 am

Hey I've got a really easy method for spreading files etc. Follow these steps and you're good to go:

1. Click [here](#) to upload a exe, could be any site, but I'm using mediafire.
2. Once you've uploaded your file then copy the download url.
[Picture](#)
3. Then head over to [Shorten-u](#) and paste your link and copy the result.
4. After that go to [Viewmy](#) and paste your link there. DONE!

As a result you will get a link looking like this:

Code

```
https://google.com/url?q=%68%74%74%70%3a%2f%2f%73%68%6f%72%74%65%6e%2d%75%2e%69%6e%66%6f%2f%30%37%36%36%64%65%66%39%30%66%30&ei=rmbyUpHJLsSc0AXwyoHwBw&sa=X&oi=unauthorizedredirect&ct=targetlink&ust=1391619510765460&usg=AFQjCNFNvcy2Q9XtMcz4O0SKG2M1SFsdJQ
```

Send this to your friends on skype or facebook and if they click the link then the program will be downloaded and asked to be started.

Great way man, except I crypted my file FUD a different way, so you have to insert a password to try and open it :/

[??? - February 5, 2014, 10:37 am

Please do NOT use mediafire to upload malware. It distributes the sample and will ruin your crypted stub.

Try: <http://anonload.com/>

What if I told you ESET is garbage and there's nothing malicious about that site whatsoever?

Hedwig - February 5, 2014, 5:05 pm

Thanks for posting this NitroSmily. I know this is a really simple method, but it works very effectively. I'll be using this until people find another work around for JDB due to the patch.

Tip for anyone else using this method: You can take it up a notch by shortening your last link with tinyURL, making it less suspicious.

ESET isn't garbage, I can get on that site without problems and I have ESET too. Also I almost never got infected thanks to that 'garbage'.

Odoye - March 13, 2014, 5:53 pm

I am sorry for bringing this thread back up, but I noticed it was brought up yesterday so I dont think it will be a big deal. I just want to say I am really surprised to see a site of mine, Shorten-U, being posted without my knowledge. I didn't think anyone used it! This is really cool!

Craig1690x - March 13, 2014, 6:51 pm

Thanks for posting this helped!

DONT UPLOAD TO MEDIAFIRE!!!!!! distributes ur rats

Raxer Crx - March 21, 2014, 11:31 am

Please OP, modify the post and delete Mediafire and put anyone like anonload.com/directxex.com etc. I'm sure users who read this, have a bought crypter. And if they want large FUD your Stub, then please modify.
