Thread: [The World of Encryption/Decryption? I want in!](#)

Uchiha Itachi - February 5, 2014, 10:28 am

Where do I start learning? I know the basics of encryption, but I want to try and decrypt basic encrypted messages? Anyone wanna throw some tutorials and perhaps a few challenges with it for complete newbies?

Many thanks! ?

TheDubWubCub - February 7, 2014, 10:12 pm

Well personally, HF isn't the best place to learn about cryptography in general, unless you want to learn about hash cracking or making your viruses FUD lol.

xedok - February 8, 2014, 4:30 am

Well he probably want to learn how to make viruses FUD, everybody wants that :) me2

Uchiha Itachi - February 10, 2014, 7:44 am

I don't want that... I mean if it's learning sure. But I used to want that, but that it's in the past now. I want to do the hardcore encryption type stuff, cyber-warfare level shiet. x;

Then I would suggest you brush up on your math skills & get those nice & fine tuned as it will help you a lot down the road.

I'm horrible at math at the moment, but I plan to re-learn it some day.

While or after you're improving your math skills, I suggest you take a look in to the past and study about various types of ciphers & how they work and start making your own and then work your way up to modern cryptography.

Google can also be of help, good luck! :D

Pm me for tutorials and help on ecrypting your whole laptop/pc.

Uchiha Itachi - February 11, 2014, 1:02 pm

I know 2+2. Is that enough? Hopefully it would be. :p Regardless, anyone know any tutorials to get me started and help me move up?
