Thread: [Running 32-Bit on 64-Bit?](#)

Fringo - May 5, 2010, 4:59 pm

Okay, so basically every good Crypter I can get my hands on is only 32-Bit and I've got a 64-Bit machine, so it always corrupts the file. Any way I can get it to work by making it think I'm running a 32-Bit machine or something? ?

Meritorius - May 5, 2010, 5:07 pm

AFAIK 32-Bit can run on 64-Bit, maybe you have things the wrong way?

Fringo - May 5, 2010, 5:32 pm

Nope, I've got Modern's Malware Crypter and he said it's because I have a 64-Bit system.

Meritorius - May 5, 2010, 5:42 pm

Weird, I might be questioning why a crypter would require something to be 32-bit.

Fringo - May 5, 2010, 5:45 pm

It's not just that crypter, it's been every crypter I've downloaded.

Its only for runtime crypters the use RunPE (Which Most use I think)

And RunPE doesnt work on 64bit os's

Well, there's my answer. Is there a solution Wynston?
