Thread: [How to hack Flappy Birds \[Step by Step\]](#)

**Rexagon** - February 7, 2014, 8:00 am

Hello Hackforums, Rexagon here on behalf of Complexity. Today I'm here to show you how you can hack Flappy Birds. This hack will allow you to float through to the top tube without dying. To see the hack in action, revert to the last picture of the tutorial.

Ok to start off, let's state the requirements.

You must have:

A jailbroken iDevice

The app 'iFile' from Cydia

Flappy Birds

Ok, so if you have an iDevice and you aren't jailbroken, and want to be, you can start off by going to the [iOS and iDevice](#) section and find a tutorial.

## Step 1

We will start by getting iFile, if you have it already, you can revert to step 2. First, open up Cydia and go to the Manage tab, then in Sources. Once in Sources click on Edit in the top right corner, then tap Add. The "Enter Cydia/APT URL" window will appear, once you see it, type in [ihackstore.com/repo/](http://ihackstore.com/repo/) in it and hit Add Source.

After verifying the source, a "Source Warning" window will pop up, don't bother reading it all, just hit Add Anyway. A black window will pop up, a lot of text and writing will appear and keep appearing, once everything is done you'll see a "Return to Cydia" button on the bottom, hit that and move on.

This is now the easy part. Go to Manage>Sources>ihackstore. Once you've directed yourself here, find 'iFile' in the list of apps. You should find something like this once you've found it;

Courtesy of 'Anmol Jain' for that picture.

Ok now hit Install on the top right corner, and the same black box as earlier will appear, and more text will show up. Again, once finished a box with "Return to Cydia" will appear, just hit that button and move on!

Now you should have iFile, if you don't, troubleshoot the problem by repeating step 1, and if a problem occurs feel free to contact me via PM.

## Step 2

Great, you've completed the hardest part. Now you want to direct yourself to iFile and you should see yourself at one of the several screens below:

Ok, let's assume you're at the first location, "/". Follow this path;  
/var>mobile>Applications

You're now in the Applications folder, you want to proceed to find the folder starting with the strand "37ECA68F-A" and open that.

You should see a screen similar or exactly like this;

Great, you're here. Now open up "Flap.app" which is highlighted in the picture. You'll now find yourself here;

Alright, you'll now see a file called "atlas.txt" in the folder you're in. You want to open that in "Text Viewer"

You'll now want to scroll to the very bottom of the text document and find "pipe\_down"

You should see something like this;

Great, now you want to hit Edit on the top left of the screen.

You should now direct yourself to the line with pipe\_down 52 270 and some more odd numbers. You want to highlight '270' (remember, you must be in Editing mode by hitting Edit in the top left corner) and change the '270' to 5. Below are two pictures of what you should be doing/see.

Now you're golden. You want to hit Save in the top right corner (this is a vital step, you have to save, for obvious reasons) and after saving, proceed to opening Flappy Bird.

NOTE: YOU MUST HAVE CLOSED FLAPPY BIRD PRIOR TO OPENING IT, IF YOU OPEN FLAPPY BIRD WHILST IT WAS ALREADY OPENED IN THE BACKGROUND, THE HACK WILL NOT BE IN EFFECT YET, YOU MUST CLOSE IT BEFORE REOPENING.

Now you want to start the round as normal, and you should now see the top tube missing, showing only the bottom end of the top tube. You can now float through the top tubes without dying, resulting in an infinite score.

Note: You can die from hitting the bottom tube, ground, and the small end piece from the top tube, so beware of that.

Enjoy ?

**RelationShit** - February 7, 2014, 8:12 am

I am actually not being able to try this right now or any soon, but it looks great! Thanks for sharing OP!

**Dreams** - February 7, 2014, 8:27 am

Here's a tip.

iFile -> settings -> File Manager -> Application name: On

**Rexagon** - February 7, 2014, 8:56 am

Aha thanks a lot man ? That's very helpful. Although I won't change the tutorial as I'm kind of busy at the moment, and iFile comes with the letter/number strands.

**?lex** - February 7, 2014, 9:10 am

I knew how to change my high score, but not this.

Thank you for sharing, even though I don't want to use any hacks.

**EliteCrew** - February 7, 2014, 9:16 am

Cheers for the tut OP. This has now caused me a lot of frustration trying to beat my friends score. Again thanks.

**Gambino™** - February 7, 2014, 9:16 am

Thanks for this, I now have a high score of 127 :D

**ramonhackpro** - February 7, 2014, 11:35 am

I would suggest:

pipe\_down 0 -100

pipe\_up 0 -100

if you insert these variables the pipes can't kill you anymore, only the ground can, my record is btw 1500, i was getting bored so i stopped.

**Erasen** - February 7, 2014, 11:40 am

Awesome tut I will definitely try this out

**TwoFeesh** - February 7, 2014, 12:18 pm

Currently, iFile is free in cydia. Although, the license is paid for. You don't need to license to use iFile, the license just gives you some extra feature(IE: switching through songs in the builtin audio player)

**Larry Fisherman** - February 7, 2014, 12:30 pm

The Invisible trick. Lol, I did this hack while in school today. I showed some friends and they looked at me like "What the fuck"

**smokeyApe1789** - February 7, 2014, 2:29 pm

Good job OP :) Time to make everyone jealous. Thanks

**overdead** - February 7, 2014, 2:58 pm

Also, I just thought I would add this in for people trying to get higher scores like me :p

Just use an auto clicker!

Option 1 is to use Autotouch (there is an ios7) though it has not worked well for me.

Option 2 is to get realVNC on your PC, and 'veency' from cydia on your idevice.

Then you just make sure youre on the same wifi on both devices, and put the ip address of the idevice on the pc

After that it should ask for permission on the phone and you hit allow, then just setup an autoclicker on your computer so it clicks on the game constantly.

Goodluck!

**Anonymous187** - February 7, 2014, 3:18 pm

I did pipe down and pipe up 0 after the 52 digit and i have an empty screen!  
Now i still crash i guess cause it's 0, when it's 1 we should be fine!

**TuViciouz** - February 7, 2014, 3:57 pm

For some reason the 37E file isn't in my applications. Any reason for this?

**Bet** - February 7, 2014, 4:30 pm

This works perfectly, although haven't tried the 1. Nice post. My friends are tripping out, haha!

**TheKingOfArabs** - February 7, 2014, 7:34 pm

Instead of a 5, change it to -100 for both up and down, that way you are invincible and the only way to die is to stop clicking.

**ExclusiveHF** - February 7, 2014, 10:42 pm

Vouch for option 2 for what this guy said. I changed the values mentioned in the original post to 0 for everything and then used an auto clicker on my computer. Doing that I got 3,476 then I came back to my phone later and found out the game ended, I don't know why.

**overdead** - February 8, 2014, 12:27 am

Yeah, for some reason you seem to die every once in a while, but if you do the -100 thing the other guy said you might not!

me too no 37E but i look and it's 988....:D

**nicksaban1** - February 8, 2014, 5:52 am

I do not play this game, although I do know what it's about. This is a good find/tutorial. It encourages users to delve into the inner workings and discover new things.  
Good job OP!

**MadeByGM** - February 8, 2014, 5:53 am

Awsome tutorial ! I'm gonna try this out soon.

**VladHQ** - February 8, 2014, 7:19 am

Why would you hack this game? I understand if you hack GTA 5 or Call Of Duty series, but Flappy Bird? The game just shows off how focused you really are. There is no reason to hack it unless the player is like really low to.

**1illii** - February 8, 2014, 10:33 am

You know you can just not play it if you don't enjoy it, right?

**ramonhackpro** - February 8, 2014, 1:23 pm

(Feb 7, 2014 04:57 PM)Warrior. Wrote: [\[CITE\]](#) For some reason the 37E file isn't in my applications. Any reason for this?  
go to IFile>Settings>File Manager>Applications Name and toggle it on. This will give the map the name "Flappy Bird".

**juggared50** - February 8, 2014, 5:48 pm

Thank you very so much man ! ?

NOTE: For the new version, change they 2 pip\_down, not just one ;D

**ramonhackpro** - February 9, 2014, 8:23 am

yea, Thanks for the +rep!

The new update on IOS changed a lot of things.

If you really want to get far, download veency and RealVNC + an autoclicker.

**ServalG** - February 9, 2014, 8:26 am

doesn't really matter anymore, creator is taking it down, check out his latest tweets  
<https://twitter.com/dongatory>

**Rahul\_Rulz** - February 10, 2014, 7:43 am

Good, but I would rather play without cheating or else it won't be fun anymore ?

It wasn't on my phone too but just go to ifile's settings and toggle application name on. Hope it solved your problem.

**iRun** - February 10, 2014, 3:53 pm

Why the fuck would you pirate iFile? It's freeware!

**Rexagon** - February 10, 2014, 6:30 pm

(Feb 10, 2014 04:53 PM)iRun Wrote: [CITE](#) Why the fuck would you pirate iFile? It's freeware!

From my experience, it used to not be freeware, therefore I was acting upon it like it wouldn't be, since I was not aware it was now free.

**etafo** - February 11, 2014, 9:56 am

Great thread You Have here Bro, I enjoy every bit of this. Bravo

**Layer 7** - February 15, 2014, 10:21 am

Thanks for the tutorial works fine, thanks!
