Thread: [Best Program to Convert PC Videos to iDevice Videos?](#)

Wirt - February 10, 2014, 12:38 pm

So my friends wanted to watch this anime called "Boku No Pico". I have no clue what it's about other than it's very disgusting and disturbing, and my friends dared me to watch it.

Anyways, back to the point, I downloaded all 3 episodes (I think that's all of them..) and they're all in .AVI format, and I need them in a format compatible with my iPod touch. I need them on it so I can watch this anywhere, not just on my PC.

Do you know of any programs that can convert .AVI video files to a file that's compatible with an iDevice, while keeping the quality?

Thanks!

Google bro.

Not sure which is the best. Just choose whatever looks most appealing to you.

There is a great program called AVI to MP4 Conveter by A Software Plus.
