Thread: [School Admin hacking or school network HELP!!!](#)

Analytical - February 10, 2014, 9:29 pm

i need help hacking my Admin at my school so i can run a bitcoin/litecoin service on some pc's that arent used in the class room i can access cmd on one pc but thats because i changed some shit in BIOS is there a program i can use on a flash drive to copy usernames and pass?

another thing i mostly can care less about the bitcoin services because a can get expelled i just want admin account on all pc's i think its one account for the whole school

No, it would be one account for the domain. They might only have one domain, but that's a completely separate debate.

As for getting the domain admin details, I used to create one when I was in school. I deliberately deleted some files to corrupt the software we were using in class so the admin had to come reinstall. After installation this app starts automatically but they never closed and made me open it, so voila. If you then go to File>Open and launch CMD, the CMD window opens with the domain admin account and you can just add yourself as a secondary admin on the domain.

Low tech, low risk.

Addictionz - February 10, 2014, 9:34 pm

Unless you want to be expelled don't even attempt this.

Analytical - February 10, 2014, 9:37 pm

i cant access files that are important and i tried adding myself in cmd and i get a access denied or system error <5.> i have a flash drive if that helps i tried to create some .bat files that would open on start up of the pc

Isascretviewe
wirelessnetviewer
snifferpass

but idk what the fuck they do

Bill Wilkins - February 10, 2014, 9:39 pm

Wow I can't believe I just read this, dying of laughter ATM ?

With the computers my school has, if you try to run a miner on there, the school will burn down overnight.

Analytical - February 10, 2014, 9:41 pm

Imao yeah true they are dogshit but if i have like 3 per room 20 rooms im not paying electricity so it would be a goood daily profit if i get some out of the pool

one more questoin how do i get a profile picture

Just remember if the school burns down all the evidence would be gone so you should be fine unless there is logs on the computers that get sent to the network / admin / school HQ or something.
?

thanks for the help....

That's why you need the privilege escalation trick I mentioned... I didn't just delete files for fun.

Why bother adding yourself as an admin? Just change the admin passwords on any computer you use. I'm sure you know how to do that and I'm not sure why you haven't thought of it, but just in case here.

Open notepad and type this

```
net user administrator
```

and change the password to whatever you want for that computer. As for an account for the whole network, at my school we have an account called "Guest". So I just use this command.

```
net user Guest
```

and change the password to what I want. Make sure to save the file as a .bat file obviously, then run it, etc. See if the Guest one works. It did for me and I could use the account on any computer in the school with my password. Hope this helps, not really sure if this is what you were looking for, but eh, whatever.

Are you a troll? Because you look like so... Unless he is an administrator he can't change the admin pass with CMD am I right? You would need the admin privileges...

Builder_Geeza - February 19, 2014, 3:27 pm

If there are still a few XP computers in your school, just wait a few months until all of the exploits start flooding in for windows XP.

They may not be used but they are hooked up to the internet.

I can assure you that it won't go Un-Noticed. ?
