Thread: [Need a Remote Admin Tool for my own linux box \(Linux-Linux\)](#)

mindsword - February 10, 2014, 10:27 pm

Hi!

I got this new linux box, and im going away, so i need something to access it with another linux laptop. Kinda like a rat only for my own use and a friend, so theres no encryption needed, cuz i dont plan on breaking any laws.

Im running lubuntu on both the station and laptop btw. My friend uses windows, is there any chance for him to get access to it?

Teamviewer sucks, way limited. I need something like cybergate, like sitting infront of the host pc, the moment its powered on.

You know? Thanks, Peace

You can install xrdp for rdp access to that machine, or vnc ?

Here is tut for xrdp :

<https://community.hpcloud.com/article/using-windows-rdp-access-your-ubuntu-instance>

Here is one for vnc :

<https://www.digitalocean.com/community/articles/how-to-setup-vnc-for-ubuntu-12>

Try TigerVNC, it should be preinstalled, if not it's easy to install. If you just want command line access, SSH is your answer.

Fa-koff - February 11, 2014, 9:22 pm

SSH is the remote access tool of choice, it's included in nearly every *nix system I've used. (Tiny Core is one exception)

kyko - February 11, 2014, 11:39 pm

SSH into it? I see no reason why you would need to have X while your away, SSH should be satisfactory.

mindsword - February 12, 2014, 5:16 am

i need a GUI, or X if thats what u mean.... im not really proleet with the command line

Loki123 - February 12, 2014, 9:26 am

I did a tutorial on X forwarding some time ago

What about a simple TeamViewer setup?

Read the OP. Teamviewer is too limited.

Oops my fault, have you considered a vnc like others suggested? I like tightvnc myself.

Zerxes - February 14, 2014, 4:47 pm

You could get him to host a secure vpn on his end and connect to it then ssh into his computer to fully control it from there.
