Thread: [CMD help. No commands are recognised](#)

Cubez - February 12, 2014, 4:56 am

Hi hf, I was trying to get my ipconfig up on CMD so I could flush my dns but it keeps saying "Ipconfig is not recognized as an internal or external command, operable program or batch file" I know the command is right because I have tried many more CMD commands and none of them work, They just show that message. This started happening half way through last year but I didn't really take and notice of it until now. If anyone can assist me in this please do so.
Either message me here on HF Or on Skype: byronsmall.1 ?

Thanks if you can help me with this

~Cubez

I can also send you screenshots if you need.

What if you open an elevated command prompt (with Admin Rights) and enter the following command :

Code sfc /scannow
Does it works ?
