Thread: [How Encrypt Server Of \(Poison Ivy 2.3.2 \)??](#)

Prof.KAsBeR - February 13, 2014, 9:43 pm

Hello everyone,

I want to know about encrypt server of poison Ivy?

How can I encrypt this server?

I have some idea, but it's not working now. Because now it's exposed to all the protections!!
lol[/font]

My idea encrypt with (Visual Basic). Anyone know how to encrypt with Visual Basic 2010?

If anyone have any program for encrypt server tell me please.

And if you want to contact with me tell me. I'll be happy

Thank you,

Linux™ - February 13, 2014, 10:39 pm

Let me put it straight forward to you, Poison Ivy is complete crap, I've used it before, if you want to learn how to crypt it, then there's a method to use WinRAR for crypting, and other ways, if not I recommend you head over to the cryptopathy market after you get some more posts, and buy a crypter. I can't personally recommend one to you, because I'm not big into "Remote Administration Software", but I hear you can find some good deals. By the way I recommend you get DarkComet RAT 5.3.1 it seems to get the trick done, or personally stop with the windows executables, and look for jRAT, it's cheap enough, and JAR's usually don't need to be crypted, the price is about \$40 bucks for lifetime, redpoison does a good job as well as the jRAT team. Plus you can infect mac's, and Linux machines, or practically anything that can run a .jar file.

But if you want to know how to crypt here's some resource links:

<https://hackforums.net/showthread.php?tid=2734666&highlight=Malware+Database> - The malware database, find a complete list of "malware" tools here.

[Cryptography and Encryption Market](#) - The encryption market.

The tutorial for WinRAR crypting:

I don't know everything, and I'm sure there are many people here who can answer this better than I can, I thank everyone for their contributions, I hope this at least helped a little. Best regards to all.

Thank you my friend for this valuable information.

Your words are true, Poison Ivy is complete crap, but now I use Spynet and Bifrost.

I will try DarkComet RAT 5.3.1

Thank you for all.
