Thread: [Need help fixing text editor on MyBB](#)

Vaper - February 14, 2014, 10:16 pm

So this is what the text editor looks like

<https://puu.sh/6WKh3.png>

I have tried everything to fix it. I have followed every tutorial and nothing works.

Someone please help.

Thanks

This isn't on HF is it? Is this a forum that you own?

If so, I would go and inspect the element in your browser, then look through the styling in the myBB theme, and see what you can find for that element. If you could puush that image and post it, I could tell you what the problem could be. :)

I own the forum.

www.vectorgaming.org

And I did post an image.

brewery - February 14, 2014, 10:49 pm

I was referring to the image which would feature some CSS styling of the textarea element inside your myBB theme.

You need to change the doc width of your forum, my browser zoom is 100% which is normal but your site <http://prntscr.com/2smxbd>

Lexa - February 15, 2014, 2:12 am

This might sound weird, But have you tried resizing the text box using the little icon in the bottom corner?

<https://gyazo.com/2d4969d8b704205a2244756246acd742>

Also could you PM link to your forum so I can test if it works fine for me.

Go to your control panel or your FTP and open (jscripts/editor.js)

Find:

PHP Code

<?php

PHP Code:

```
// Determine the overall height and width - messy, but works
w = oldTextarea.getDimensions().width+"px";
if(!w || parseInt(w) < 400)
{
w = "400px";
}
if(this.options && this.options.height)
{
h = this.options.height;
}
else if(oldTextarea.offsetHeight)
{
h = oldTextarea.offsetHeight+"px";
}
else if(oldTextarea.clientHeight)
{
h = oldTextarea.clientHeight+"px";
}
else if(oldTextarea.style.height)
{
h = oldTextarea.style.height;
}
else
{
h = "400px";
}
this.editor.style.width = w;
this.editor.style.height = h;
```

Replace With:

PHP Code

<?php

PHP Code:

```
// Determine the overall height and width - messy, but works
w = "550px";
h = "300px";
this.editor.style.width = w;
this.editor.style.height = h;
```

Find:

PHP Code

<?php

PHP Code:

```
textInput.style.height = parseInt(areaContainer.style.height)+"px";  
textInput.style.width = parseInt(areaContainer.style.width)+"px";
```

Replace With:

PHP Code

<?php

PHP Code:

```
textInput.style.height = "229px";  
textInput.style.width = "544px";
```
