Thread: [\(TuT\) Moving Website to new host!](#)

x0n - February 15, 2014, 3:37 am

For those who doesn't know how, This might come in handy :)

One_Freed0m Easy way to move webstie to a New Host.

#1 Create a new folder name it " old website " and connect to your old ftp and drag your website files into the "old website" folder we created on our desktop.

#2 While our files are transfering to our desktop, we can go to our /phpmyadmin and make a database backup. Click on Export!

#3 Follow the steps on the picture , And save the file .db
(make sure you check the box Save as File)

Nice almost done, Now we have our olddatabase.db saved.

#4 Upload the website files saved at the "old website" folder created on desktop to your new webhost.

Last step

#5 Connect to your new /phpmyadmin and lets import the database we saved on step #3

#6 Remember to edit your configuration/settings file with the new database information

You are now DONE!

If you have any questions
please feel free to contact me

Very nice tutorial mate, keep it up and yes, helped you out to get yourself a L33t.

Obli - February 15, 2014, 4:46 am

Basic tutorial, yet very helpful. Thanks a bunch, mate.

Thank you so much ?

Bluxy - February 15, 2014, 5:20 am

Also, remember to edit your configuration file with the new database information.

Wops thanks man forgot to mention that <3

.jpg.exe - March 9, 2014, 6:19 am

This Tut Helped me Out alot. Thanks for these great Tuts Please keep them coming.

Kind regards,

Lexa - March 9, 2014, 6:43 am

Great tutorial and very handy for those that don't know how to move their site.

Jessi - August 26, 2014, 1:07 am

Thanks dude

I'll need this tuto when i'll create new website with subdomain :)

Headdy - August 26, 2014, 2:10 am

Thanks! I just used this even though I didn't have to.

Great tutorial, easy to follow, simple. Get's the job done easily ;)

This is really only one way to do it, and it's also the slowest if you ask me.. I would recommend either using a cPanel backup, or using the file manager in the cPanel to compress all the files into a zipped folder then download that, and upload it to the new host and extract it, and just manually move the database over as you described. But good work, should help some people.

Good job, Nice tutorial. :)

I would like to add, that If you happen to be using wordpress, you'll have to modify the database to match your new URL. Although it's not that difficult, the duplicator plugin works awesome, and does all of this automatically.

Here is a thread for those who may need it- <https://hackforums.net/showthread.php?tid=3903754>

Stealth V2 - August 28, 2014, 6:05 am

Nice tutorial, wish I saw this awhile ago when I owned my forums.

x0n - August 28, 2014, 7:48 am

Thanks for the nice feedbacks guys.
