Thread: [\[Tutorial\] Basic / Union based SQL Injection](#)

-zERaIT - February 15, 2014, 6:37 am

too old to even be considered as valuable.

Viagra - February 15, 2014, 6:43 am

Wow! Very detailed tutorial! Thanks for sharing!

diiiaz - February 15, 2014, 7:29 am

Such a detailed tutorial. Might read this later. Amazing!

ktmercedes - February 15, 2014, 10:05 am

Thanks alot for sharing. very nice tutorial. Every tutorial i read on HF there is always something new to learn.

-zERaIT - February 15, 2014, 10:38 am

Your feed back is appriciated guys, thanks!?

Heng - February 15, 2014, 11:11 am

Great detailed tutorial :)

Thanks for the effort kind sir!

Betty Boop - February 15, 2014, 1:34 pm

Great detail tutorial. You should add what you can do if you get a version 4 website, but other than that it's great for people new to sql.

t.pro - February 15, 2014, 2:16 pm

nothing new BUT well explained! (sure a lot of work)

Good job mate and thx for the hint with my hackbar-mod!

keep on doing ?

?Homie g dawg - February 16, 2014, 5:02 pm

Very nice tutorial, I like it 10/10. :)

Nader_Max - February 18, 2014, 3:48 am

I love this tutorial ! one of the greatest once :) Thank you so much

-zERaIT - February 18, 2014, 5:26 am

Appriciate your feedback guys, thanks!?

MrCortex - February 18, 2014, 8:41 am

This is one massive and detailed tutorial man ... great job

ga1axi3 - April 11, 2014, 8:14 am

A great tutorial to start with!

Thank you!

The invisible machine - April 12, 2014, 8:18 am

Very nice tut bro! but where do i get a website to inject? i tried many sites...

multiplex - April 12, 2014, 3:08 pm

Seen many tuts about SQLi but this one hose parts that helped me out :) Tnx mate

??Smiley? - April 12, 2014, 10:25 pm

Great tutorial!! :D I'm just curious why do you have to do "--" after every url?

tehnninjamaster - November 18, 2014, 8:22 pm

(Apr 12, 2014 10:25 PM)AboveTheRim Wrote: [\[CITE\]](#) Great tutorial!! :D I'm just curious why do you have to do "--" after every url?

Correct me if I am wrong, but it executes the command.

Example,

site . com/bitches.php?bitid?=1 order by 10 <--- some sites would not do the sqli command.

So, site . com/bitches.php?bitid?=1 order by 10-- the -- executes the command. :D?.

Also, OP, what is the program you are using in the tutorial? :P

I know how to use manual, but when i'm in the hurry it'll come in use :P.

Gyan - December 14, 2014, 8:37 am

Very good tutorial in details. Thank you for sharing it.

bzgzd - December 14, 2014, 10:09 am

What is after -- is comment in sql
same as // in C type languages

So if injecting something into middle of Sql you put -- at the end to comment out everything that comes after your injection in original code.

could be also used

dev.mysql.com/doc/refman/5.0/en/comments.html

Aakash Choudhary - December 14, 2014, 9:29 pm

Very Nice tutorial brother. Keep it up (y)

-zERaIT - December 15, 2014, 2:57 am

Thanks for the feedback guys, appriciate it.

vagabund132 - December 29, 2014, 7:15 am

When I do table_name it lists only one table which is "CHARACTER_SETS" but I know the site has over 10 of tables. What should I do?

Aakash Choudhary - December 29, 2014, 7:32 am

You should use table_name in group_concat()

Thanks

lexpfast - *December 29, 2014, 4:00 pm*

ethania.net vulnerable or not someone help please?

Aakash Choudhary - *December 29, 2014, 8:10 pm*

I don't think so. Using dorks got many results but due to laziness not try every result ?
