Thread: [Exposed Botnets : Bitcoin Miner Botnets](#)

Hahar - February 16, 2014, 9:55 am

I was just reading about the botnets used for Mining coins and I can't believe how many people decide to run a botnet without any knowledge on bots, rat, pc, internet etc...or they use the most shittiest botnets that are available here!

Take a look [here](#), this guy is awesome!

I Smoke Modems - February 16, 2014, 10:04 am

Hahaha, this is amazing. I'll bookmark this for sure.

'Ben - February 16, 2014, 1:06 pm

Site has been posted so many times before.. nothing new

If people think they can make some quick money everything else goes out the window.

Phreaking - February 16, 2014, 3:04 pm

This is generally what happens.

1. User sees profits from Mining altcoins.
2. User uses all the money available to get into the game without research.
3. User either purchases bots from a bad seller or shows his net to his friends over skype/screenshots/ect.
4. Net is posted on Exposed.
5. Botnet gets hacked, user loses all his money, panel and bots. Domain gets banned.
6. We all laugh at common stupidity.

One of the reasons most HF bots are listed on there is because of their owners. They want popularity.

Mr. Dr. Prof. Patrick - February 16, 2014, 3:47 pm

I dont see how awesome he is because any person with the knowledge can run a botnet stub in vm with wireshark and see the knock address and it can happen to anyone if their stub gets downloaded and analyzed no matter how much l33t haxor pro they are. i guess thats why they have something called bulletproof where no matter how much complaints the domain/hosting gets no one cares

Not even about bulletproof, someone could easily bruteforce their way into the net.

If the panel is secured properly there is no way to bruteforce the way in...Its just like saying that you will bruteforce into someones facebook account!
