Thread: [\[Trick everyone\]How to Spoof your Skype into someone elses \[Trick Everyone\]](#)

My 2nd tutorial, Here today I am going to show you how to change your skype name to make someone else think they got hacked. It is a very easy method to pulloff and the chances of getting caught is low unless you're just that fuckin' stupid.

Go to your skype account profile and hover over your name.
Click on your name and hit ALT then 255 (KEYPAD)
Then hit enter. It should come up as a blank space or something

Step 2.

Join a bigg-ish group so there are atleast 3+ people with your new spoofed name
Your name will be the last person who said stuff and you can just troll them and make them think they got hacked.

The good thing about this is, if you join a group then they wont know who did it because its just not one person doing it.

The chances of them finding out are slim because your name is only one blank space right? it'd be hard to find the profile

The space to the left is you.

You have to use your keypad for the 255

You press alt with your keyboard then type in 255 with your KEYPAD
