Thread: [Bypass led Webcam](#)

invisibleman - February 17, 2014, 6:19 pm

There's a way to bypass the LED indicator of some Webcams?

Understalker - February 17, 2014, 6:20 pm

There is no way to bypass this, sorry.

Xorex - February 17, 2014, 6:22 pm

In some webcams, you can turn off the LED in the Registry. Though not all.

Goodies - February 17, 2014, 6:23 pm

Honestly, no. Not natively. Not that I'm aware of anyways. This goes in "Beginner Hacking" by the way. In order for this to happen, you'd have to patch and flash software to keep it off...

DrDinosaur - February 17, 2014, 6:27 pm

It depends, but not generally. See:

I find some function in registry to turn off this option, but don't works. Or maybe there's some way to bypass this using ASM or editing the driver of Webcam.

I believe it's generally pretty advanced.

SIM-5561 - February 17, 2014, 11:37 pm

I read about this and it IS possible.... If you can write drivers yourself ;-) I'm pretty certain that most webcam drivers are generic, hence the LED. Idk, sounds like a job for a programmer - and a really good one at that.
