The Empire - HTML & CSS Helpdesk

About Us:

We strive to provide top-notch Webdevelopment support. Our team consists of members of The Empire who are experienced within all fields Coding related, and more.

We will answer all of your HTML & CSS related questions, solve all of your problems, and remotely assist you when needed.

No matter what your post count or reputation count is, we will help you to the best of our ability. We will assist and support you with any and all situations

Each member is specialized within different skills, but our members should be able to answer any question thrown at them. If not, we will state so without wasting your time.

Please remember to search for your question or problem within the Forum/Thread/Google, prior to asking it here. Thank You!

Members who may have any questions are required to read our HTML tutorial before posting.

Explain your problem the best you can:

Skype name:

Fill out the form above to receive assistance from us.

If you simply have a question, feel free to ask below.

Apple Jacks - February 19, 2014, 12:54 pm

What is your question/problem ; Learning the languages

Explain your problem the best you can: It seems as if whenever I try and learn a language, the tutorials I find online only go into really the basics of each language. Where can I find reliable, good tutorials to learn the full language?

Skype name: PM for it.

What language are you exactly trying to learn? It's an option to buy a book for the language you'd like to learn, gather some tutorials about different subjects of the language you'd like to learn which will make it into 1 detailed tutorial. Or if you're more comfortable with watching and hearing how something works you could search youtube as an example.

Never mind about what I posted.

He put the empire name on it. You are the empire owner.

I'm sorry...

(Feb 19, 2014 03:26 PM)MareepTheSheep Wrote: [\[CITE\]](#) That's his signature.

Why would he need to anyway?

Hes helping people learn, if they do not want to learn then they can purchase a website. So again why would it matter?

He was talking about the image which I've placed in the helpdesk for the people who weren't able to understand the tutorial or just couldn't successfully create something they need.

Thank for backing me up though.

Well as I don't really know anything besides basics of html and css, I would assume I should start there.

Again, with YouTube most tutorials are basics, unless you know what you need to search for (a certain function for example) but as I don't know to search for that would not be useful.

How did you learn may I ask? ?

Rapist is away, so I'll answer your question.

I got started learning HTML and CSS. I recommend codecademy for this. They teach you the proper way of doing things.

Try to experiment with your own projects. Make yourself a blog?

It helps to do. You could buy a book, but I don't recommend that for a language like HTML or CSS.

One thing I find helps me get better is find people who need a website done, and offer it for free. Once you are done ask them for their honest opinion on it so you can further improve.

Here is a CSS Reference: <http://www.w3schools.com/cssref/>

Here is the Codecademy course on HTML and CSS: <http://www.codecademy.com/tracks/web>

Let me give you some more information about tutorials, and the basics.

First of all, Here's a beginners tutorial about HTML.

<https://hackforums.net/showthread.php?tid=4068064>

HTML and CSS are just languages used to create a structure and design for a website. You're not able to automate things with these languages. I would suggest you to be familiar with these languages before even considering learning another language you may like or need.

It would be usefull if you could describe me what you'd like to know or what you'd like to make and I'll try to find some related tutorials.

Here are some tutorials and tips about HTML and CSS.

HTML:

Spoiler [\(Click to View\)](#)

[The Empire HTML guide](#)

[W3schools HTML](#)

[HTML.net Tutorial](#)

[Echo-Echo HTML tutorial](#)

[Youtube HTML tutorials](#)

CSS:

Spoiler ([Click to View](#))

[W3Schools CSS tutorial](#)

[CSSTutorial .NET](#)

[Echo-Echo CSS tutorial](#)

[HTML\(5\) & CSS\(3\) Tutorials - Youtube](#)

You should just slowly read them all, simple google on something you'd like to know or make and you'll find something usefull yourself. Whenever you've got questions you're free to ask here for help or you're able to search google / youtube etc.

I highly recommend to download a simple template by googling for : Free html template. After downloading you're simply going to try to edit the webpage the way you'd like to in order to fix the mistakes you'll make.

Note that you should read the tutorials before practising anything.

Goodluck,

Looks good, for what languages I wanted to learn, eh. I want to start off learning the how to make the site pretty and the design parts, (learning now) then when I get that down move into the 'backend' where the user can interact with the website and such. Will take note and use the info you two gave and keep learning. Thanks, ?

You're welcome, feel free to ask any questions if you're unable to create something yourself.

Wasn't Kansas doing this but covering more topics?

Rap!st - February 20, 2014, 1:45 pm

(Feb 20, 2014 01:45 PM)Xen0n Wrote: [\[CITE\]](#) Wasn't Kansas doing this but covering more topics? There's atm no other helpdesk open. I'm sure when he got time to do this he'll take this over and include some more sections.

This one is just mainly made to provide support with simple HTML & CSS questions.
