Thread: [Automated website to sell accounts?](#)

zuee - February 19, 2014, 5:54 pm

Like, i'll have a list of accounts with usernames and passwords. Users just select quantity and pay with Paypal. Right after they purchase, they are either emailed the username and password or are redirected.

How would I implement this and could someone do this for me?

Evanescence - February 19, 2014, 5:56 pm

I don't know how to code it but, you could have a database of names:passes and when someone buys accounts just have the accounts emailed to them and deleted out of database so no repeats are sold

Yummy - February 19, 2014, 5:58 pm

It actually pretty easy. Use php and a paypal IPN and you sir are on your way to an autobuy script. :)

zuee - February 19, 2014, 6:01 pm

Would anyone be interested in coding a simple website for me? I'm talking just a body a text with a Paypal button that will send the accounts. Different accounts and never repeat accounts.

NOAH - February 19, 2014, 6:01 pm

Find an autobuy script.

Edit it to your needs.

Profit??

Narrate - February 19, 2014, 6:03 pm

The closest site I can think of is Sellfy. You can upload a file and set a price to sell it for, than when someone buys, it sends the money to your paypal, and the buyer gets to download the product. If you need help hmu.

You're an idiot Imfao - February 19, 2014, 6:04 pm

That won't work unless he makes multiple Sellfy's

Not like that. I've used sellfy before and that's for products. Let's say I have 100 accounts. 1 account = \$5. I just upload a list of the accounts and everytime someone buys an account, they get an account off the list, then the account is removed from that list for no repeats.

you know. It's either that or im not getting the point of this thread.

No shit.

You could pay someone to code a small website for you like that

I'm not going to make 1000's of selfy products as that's unprofessional. There's a way to do it the way i'm requesting it.

Would you be able to do it? It's going to be a very simple website. The only hard part would be the autobuy feature.

PA?ADOX - February 19, 2014, 6:09 pm

how are the accounts stored? like in a database or a text file? if they're in a database this wouldn't be to hard.

zuee - February 19, 2014, 6:10 pm

They're just in username:pass format and in a .txt, but couldn't they just be converted into a database file? Not too sure how that works.

I would hope it would be in the database.

I mean if they are in a text document free accounts for me.

I can't code to save a life. You're better off going into Buyers Bay or seeing if there's something similar to your needs in website market

zuee - February 19, 2014, 6:14 pm

This is how I made the accounts. They were created and automatically put into .txt file with username:pass. What could I do?

EDIT: I've figured out what i'm going to do.

Thanks everybody.
