Thread: [How to obtain windows 7 passwords?](#)

Rex Deus - February 20, 2014, 4:18 am

I would like to obtain the password of the administrator from my local account

- 1.I know what you're gonna reply but I cannot boot a LIVE CD or boot any program.
- 2.I am able to run any program and also access cmd. I already tried gsecdump and pwdump7 but they function as password recovery tools and not as hacking tools as they require a administrator privilege

If you can't boot a live CD, can you boot a live USB? I'd give that a try before pursuing other methods. Ophcrack is powerful software that will do exactly what you need here.

Rex Deus - February 21, 2014, 5:03 am

I know ophcrack works, I know others softwares you boot work too.
I can simply grab the SAM file by running linux.

I just would like to know if it is possible to get/reset the admins password from guest account?

No it's not possible to get/reset the admins password from a guest account.

Guest accounts don't have the right privileges to carry out any administrative task.

What happens when you try to boot a CD or USB?

ratalaser - February 21, 2014, 6:30 am

I'd go for a local privilege escalation method on that windows. List program installed and look for any unpatched exploit.
