Quick Way To Get HELP!

Hello HF members!

I have seen alot of posts where people have typed

" I need help can't view my website "

Example of an user that needed help

Please know that im not picking on anyone, I just want you guys to get help in a faster way.

Spoiler [\(Click to View\)](#)

Well you wan't to be able to get quick help by the community members,

You will have to provide more information, so the people that want to help you get a fair view of the situation you are in.

Example:

#1 Provide error codes

#2 Show an image of the error

#3 Did you edit something when it happened

#4 Did you change theme?

#5 What software/CMS are you using?

#6 Provde as much info as you can.

Good tool to use:

FireBug (Firefox Plugin)

Well It sure would be helpful when someone wants help with something they provide the code and a

screenshot or explanation of the error ???
That seems to be a real struggle out here...

Very good Thread, HQ and Very Helpful. Thanks man

Kind Regards,
