Thread: [Symantec](#)

ownd - February 22, 2014, 4:13 am

Hey guys

I have been trying everything to infect my school laptop but I cant since I have limited access.

I cant disable symantec.

my rat is not crypted

if i crypte my file can symantec still detect it?

anyone who can help me out would be much appreciated

Skype chelaby88

If you buy an FUD-Crypter, the RAT would not detect. You can use the search function here on HF to find someone.

But why infect an School Laptop?

ownd - February 22, 2014, 8:40 pm

while we were given school laptops but we cant install programs only the Administrator so every time i want to install a program i have to be in school and then waste my time just to install a program. so i decide to to set up A rat (already done) on another computer and infect the school laptop. When the administrator types the password to install the program bang i can have access to the password as well :D

Xorex - February 22, 2014, 10:02 pm

If you crypt your file Symantec probably will not detect it. And I wouldn't recommend infecting a school, it's a place for learning.

ownd - February 22, 2014, 10:51 pm

Well my goal is just to get the password for the administrator and downloading and installing the programs instead of wasting my time going there just to get a program installed

Dr.Rockzo - February 22, 2014, 10:55 pm

<http://bit.ly> [WARNING: potentially infected]/1eimP5B there you go man good luck

Xorex - February 22, 2014, 10:57 pm

Well don't get caught.

If you just want the admin password, mount Ophcrack on a USB and press F12 and boot on USB. It'll get you the admin password, here's the link - <http://ophcrack.sourceforge.net/>

cyberducky - February 22, 2014, 11:01 pm

Infecting your school won't make you popular. I destroyed my school and hijacked the announcement software and I just got into trouble while nobody even noticed.

ownd - February 22, 2014, 11:09 pm

Yeah that's actually a good idea gonna try it thanks :D

Terry A. Davis - February 23, 2014, 12:11 am

KonBoot into the Administrator account so you have permissions to do things.

Then leave town since schools are government own facilities and they can arrest you.

ownd - February 23, 2014, 12:45 am

KonBoot into the Administrator account how does that work??

xboot tool Cant seem to download it file missing or something <http://prntscr.com/2v2ed8>

FlashTriK - February 23, 2014, 1:45 am

Very nice, Konboot is pretty legit, tried it on my old pc. Next step, school PC's >:D

ownd - February 23, 2014, 2:15 am

<http://prntscr.com/2v2nu3> i get this error

Google for it, I don't have access to my computer.

ownd - February 23, 2014, 12:28 pm

Yeah I followed you tut, I tried many times I still get an error.

<http://prntscr.com/2v2nu3> i get this error

Redownload konboot from a different host or disable your antivirus it is a false positive tool, or give yourself access to the file and run Xboot as admin

grgrsn - February 23, 2014, 3:20 pm

You may or may not know this. But if and most likely get busted, it'll cost you years in jail or a highass load of money to pay off.

It's highly illegal (and stupid imo) to infect a school since it's somewhat there to help you :-)

Vola - February 23, 2014, 3:22 pm

Why not get admin rights with Hiren's Boot CD?

metakill - February 23, 2014, 3:35 pm

Is the school using DeepFreeze? I think there is a way around it, that I ALMOST used, but I had to stop as I was at school and the teacher who let me attempt infection did not want me to start modifying the OS to get around it.
