Thread: [Spread torrents I does not work](#)

miton - February 22, 2014, 5:43 am

Hi, i test to spread with torrents

upload the torrent file to piratebay eg
and I can not nor I appear in searches
is as if it were to be published

then I posted in torrents but no more
get or discharge ?

someone can give free advice

thanks

Try to use another site and check if it works. Remember to crypt your file.

Sky - February 22, 2014, 7:45 am

TPB will have your file removed within 10 minutes, don't even bother.

~Arcane ?

be sure to put all the files in the same folder , if you don't do that you will not be able to be on "seed"

Saduto - February 22, 2014, 8:58 am

Piratebay Distributes samples, what I have heard anyway. I recommend you get 1-3 Seeds then upload to <http://www.kickass.to> (Make sure to have a VPN) I know a guy who got 30 Slaves in 1 day.

I hate Kickass torrent!

Haven't successfully spread to any yet.

First try, my rat was detected, befor I had seeded it to any1..

Second try, the same thing happened, or they blacklisted me because of my ip..

Third try: I tried to upload a clean piece of software, to gain some trust, but unfortunately, It was a old piece of software, that I had earlier prepared for a torrent, and it was detected, so that got removed...

And 4th time, I got banned because of spam, or smthing... Probably because of the ip again..

Damn, it's not easy.. And isohunt got shutdown, though I heard, it has returned... I might try there...

I think the best method for automatic its youtube or javascript

Bucke - *April 3, 2015, 9:29 am*

I would suggest spreading with demeniod or piratebay their are multiple tutorials just have to google them!

coldxice - *April 3, 2015, 10:06 am*

u cant even spread ur torrent on piratebay or demonoid anymore...
