Thread: [VB2010 wont run a stream](#)

Djokovic - February 27, 2014, 3:02 pm

hi all coding a system to stream and when i click the play button it says connecting then connected but doesnt play.

the code ive used is

Code axwindowsmediaplayer1.url = "www.youtube.com/455453"

^^Youtube example

any ideas people?

shebang - February 27, 2014, 3:23 pm

I hope that's not the actual link you're using.

Try this:

Code `https://youtube.googleapis.com/v/{ID}`

Djokovic - February 27, 2014, 4:18 pm

didnt understand that 1 bit link doesnt work?

That's because you need the absolute URI of the mp4 or flv file associated with the youtube clip. Try a WebBrowser component, and make it navigate to a link like this:

<https://www.youtube.com/watch?v=hkDD03yeLnU>

Replace /watch?v= with /v/, so like this:

<https://www.youtube.com/v/hkDD03yeLnU>

okay mate thanks i have found a video i want to stream but its in the format of this

www.xxxxxx.com/54435

how would i stream something like that?

ive tried using the /v/ but nothing

No YouTube video is in that format..

Djokovic - February 28, 2014, 1:14 pm

noo i dont mean has xxxxx.com

basically like this www.youtube.com/43634

im talkin about the numbers at the end are they encoded in any way?
