Sizes starts from 50kb(jhprotominer) and they doesn't drop... A miner that drops is worthless. I have a 3kb miner that doesn't drop too, small size wouldn't actually mean directly that it drops.

Also, I would recommend changing the price to \$20 monthly and \$50 for lifetime.

It is done by INJECTION, no drops/downloads.

Everything is done in memory.. It's injection, not magic. No files are dropped nor downloaded at any point. Price is reasonable, 20\$ per month is too cheap. For product like this, the price should be even higher..

We have never advertised it as FUD. It is not, and it has never been.

Current injection point is VBC.exe - but we're adding more injection points if one fails. The EXE itself does not have any dependencies.

Its a shame I bought Aura Miner a week before you moved on to this miner. So that's it for Aura Miner i guess, no more updates on that project anymore. Just disappointment as a customer, to be honest. There doesn't seem to be a long term focus on a project, but rather short sprints and then jumping on to the next best project.

I think this is a fair enough response

In regards to it being FUD and using a crypter instead, I already had a crypter I just wasn't sure if it was compatible or not, would "DataScrambler" for example work or can you recommend a crypter that would work with aura miner

In regards to it being FUD and using a crypter instead, I already had a crypter I just wasn't sure if it was compatible or not, would "DataScrambler" for example work or can you recommend a crypter that would work with aura miner

Aura Miner had no dependencies so look into crypter's with that.

Vouch for Soccer. Legit miner. Good product, worth a purchase.

Soccer - March 12, 2014, 11:22 pm

Thanks for the feedback Afro.

I am starting to take suggestions on features to add for the next update.

Post your's below

Qmz_ - March 14, 2014, 6:58 pm

CUSTOMERS:

Many of you seem to have problems with passing the arguments for the miner. The issue is that you're using the arguments like this:

Code minerd -o URL:PORT -u USER -p PASSor

Code minerd.exe -o URL:PORT -u USER -p PASS

That is wrong. You should use it like this:

Code -o URL:PORT -u USER -p PASSSo the <minername> isn't included.

If you are having other troubles, kindly ask Soccer for a PDF manual for the miner - which answers most of your questions.

Thanks..

So are your implementations of protminer, cgminer, bfg, cpu minderd and the ufasoft GPU miner obfuscated as well? I am not sure if crypting after the build will help as I know they all get picked up alone by AV in a heartbeat by themselves at least. Any further info on how they are implemented would be fantastic, I look forward to buying a copy soon.

Output isn't FUD, so you need a crypter and after that it's FUD.

Correct me if I'm wrong but stratum is the protocol used by mining pools to mine coins. And as far as I know, their miners have that option. If they don't, it's in their 'getting started' guide (PDF)

Hello...please kindly email or add me on Skype : simon.40004 want to purchase your product

AintNoLackin - May 4, 2014, 7:00 am

Does anyone have any screenies of this in action and their earnings from my experience on hackforums it's ridiculous to purchase anything without proof that the owners claims match up with

the actual product

I will be glad to show you my set up. All my bots, and my pool to show you of it working.

Orchid - May 4, 2014, 8:43 am

Big fat vouch for this product and user, just bought my product today works great so far!

Sent you a PM and added you on Skype. Thank's for buying, you will receive your product soon.

AintNoLackin - May 4, 2014, 2:32 pm

just purchased minerD is the best option to mine by far for stealth and hashrate and computer compatability

Marky Marky - May 4, 2014, 4:51 pm

How does this work? Someone said I needed slaves for stuff like this.

iPodWoman - May 5, 2014, 8:34 pm

Maybe you should add CUDA mining? Would be interesting, glws.

Karnan - May 6, 2014, 9:37 pm

can i get a vouch copy please pm me!

thanks

As I already told you. It needs vbc to run.

A big vouch for Soccer and Null Miner. I just bought one month of this fresh miner, and when I'll get more used to it, I'll purchase lifetime for sure.

fl00d22 - May 9, 2014, 7:14 pm

Dope, I might want to buy this. Too bad I can't pm yet :|

hammel123 - May 10, 2014, 9:46 am

Hi, please contact me. I've buy your miner, but can't send pm with paymnet details....

Bins are like the servers, what you build to infect the systems. (The .exe's). I said Unlimited bins because you are paying for the builder, meaning you can make as many 'bins' as you want.

Will you update the miner to work with Grostelcoin? It uses the Grostel algorithm.

hammel123 - May 12, 2014, 5:01 am

Have buy the miner and wait now 2 days....whats going on

I can add this mining engine 100%. But I will need to know if it's a good choice, because honestly, I have never heard of it until you told me.

Im pretty sure the coin created the algorithm and no other coin uses it. Another algo that actually seems to be catching on is Keccak.

If you got 5000 online install with high end computer, how much will the hashrate be? To BTC!
Anymay nice work you got there ?

Honestly, that is hard to say, knowing I don't know the quality of the bots and knowing the difficulty rate of BTC. It's a hard call. Mine LTC or OMC with that amount.

This is pool mining.

There is a debug mining option to check your bin.

Yes, of course this works ? I wouldn't be selling it if it was a rip off.

Hacksterix - May 20, 2014, 4:56 am

Mining is evolving quickly, and scrypt is soon to be a thing of the past for anything else than Asics.

Do you plan on adding support for X11 / Keccak + Cuda mining? would be a great way to jump into V3 Mining as it seems the multipool are turning to these algorythms from now on.

Also a way to update pool informations would make a killing, people get banned from pool or want to change pool/infos etc...

The lack of new algo + no way to update is the only thing stopping me from buying that.

Hey man,

Yea, I was planning to add new mining engines in the miner to advance it some more but at the moment, I see no traffic of people asking me for it, maybe 2 or 3 people but everyone else is all about Scrypt. Once it is more demanding, I will add it in. You have my word.

Hacksterix - May 23, 2014, 11:18 am

Ok that's cool =)

What about a way to update the miner task. It's a bit sad having to use plasma http as a miner for now, as it's the online one on HF with update capabilities ^^

I will look into it all. I have a big plan for the miner soon. New version *

Hacksterix - *May 28, 2014, 3:32 pm*

Great hope to see that soon, would give me motivation to get back into mining ! =)

Bleu - *June 1, 2014, 7:30 am*

i will buy this miner if you add more profitable mining option like x11 , and what is the stub size please ? ty

Arken - *June 3, 2014, 3:00 pm*

Vouch for this miner, simply brilliant and good service as well, very happy.
