Thread: [\[TUT\] Silent Mine w/ Imminent Monitor \[TUT\]](#)

Tipiql - March 2, 2014, 10:24 am

Hey guys! [TiPi?LE](#) back here today bring you another tutorial. Today I will be teaching you how to use the new Crypto Miner function of Imminent Monitor.

Introduction

If you don't know what Imminent Monitor is, it is a RAT (Remote Administrative Tool). This means that you can infect people with the file you make and then observe, control, upload, download, sniff, anything you can think of. Imminent Monitor currently is \$25 and can be purchased [here](#). Imminent Monitor added a new feature in v3. This new feature being the Crypto Miner. This can be used to force your bots to mine Bitcoin, Litecoin, and many other online currencies. This feature is awesome because now you no longer have to make/buy a silent miner.

Step #1 - Mining Pool & Wallet

At this point, I assume that you already have bots/botnet. In this tutorial I will be mining Bitcoin using Slush's Pool. You must first have a wallet.

Go to <https://coinbase.com> and register to get a wallet. You will need to verify with an email so make sure you use a valid email. Once you are logged in, go to the Account Settings tab then go to the Bitcoin Addresses sub-tab. Finally click Create New Address. Now either copy this down for later or keep a tab of this open for later referencing. Please note that I already have 2 addresses, you will only need one.

Click for Picture

Spoiler [\(Click to View\)](#)

Now its time to join a Mining Pool and make a worker.

Go to <https://mining.bitcoin.cz> and once again register and verify your account. When you click on the link to verify your account, you will be automatically assigned a worker and password for the worker. The screen will look like this except with a different username in front of the worker and a different password.

Click for Picture

Spoiler [\(Click to View\)](#)

Go back to the main page or go to <https://mining.bitcoin.cz/accounts/login/> and login using the credentials used earlier. When you first login, you should see this page.

Click for Picture

Spoiler [\(Click to View\)](#)

Now is when you need your Bitcoin Wallet address. If you saved it earlier you can copy and paste it into the Bitcoin Address section. If you did it like I did and just left the tab open, you can also copy and paste from Coinbase.

Click for Picture

Spoiler [\(Click to View\)](#)

On this page, I would recommend you set Send Threshold to 0.01 (the smallest you can go with Slush's Pool). Finally click save. Make sure you either copy your worker name and password or keep the tab open.

Click for Picture

Spoiler ([Click to View](#))

You can also edit and add more workers on this page but that is unnecessary for this tutorial.

Step 2 - Imminent Monitor

Please be smart with Imminent Monitor. If you don't have a VPN, don't use Imminent Monitor because your slaves (if their smart) can track the packets going out of their computer and find your IP and you don't want that to happen. But never the less...

To start mining with Imminent Monitor, select the bots you want to mine (This is usually all of them so you can use Ctrl+A to select all of them). Then right click and select Crypto Miner. This will bring up this window.

Click for Picture

Spoiler ([Click to View](#))

Select New Miner and you should see this.

Click for Picture

Spoiler ([Click to View](#))

This is the menu when you need to enter your own information. The Miner Pool for Slush's Pool can be found on the home page of Slush's Website. <https://mining.bitcoin.cz/> If you are using any other pool or currency, you must use stratum (if you don't know what this means don't worry about it). Also you must add

Code stratum+tcp://

to the beginning of the Pool URL. The information for this tutorial is as follows.

Click for Picture

Spoiler ([Click to View](#))

Click Start Mining and congratulations! Your bots have started mining for you! It will take you back to the previous menu and from there you can manage and maintain your miners.

Note that you can see how fast all your bots are mining together on the My Profile page of Slush's Pool. Also if you set the Send Threshold to 0.01, it will send 0.01 Bitcoins to your wallet when you break 0.01 in Slush's Pool.

Feel free to donate if you would like

Code Bitcoin : 1JyrJJ4jeE6WVwEMkzgkY8D8HB1XcTVBLB

Thank you for reading my tutorial on how to use the Crypto Miner feature of Imminent Monitor. If you need help feel free to PM me or reply on this thread.

butwhatif - July 7, 2014, 11:16 am

Do I need to make different workers for each client? And don't I need to use something else then the host from IM?

franklin83 - July 8, 2014, 6:22 am

Can you help me? How to get .dat from coinbase?

amandaking - July 22, 2014, 6:48 pm

so does this only mine bitcoin using the above sites? i selected the other mine option thing....for LTC....so does that mean i'm mining ltc? is this the best site/pool to join for mining? thanks

jameshouse - July 22, 2014, 8:34 pm

this is awesome man. Thanks a bunch. Same question as amandaking though...will wait for answer

EliteWorldhf - July 23, 2014, 5:11 am

Awesome tutorial mate, too bad this only works with Imminent Monitor :/

amandaking - July 23, 2014, 4:28 pm

I emailed their support desk...you can only mine bitcoins on their site. So I'm looking for a good LTC pool/site to join. Any suggestions?

skuar - July 24, 2014, 5:36 pm

THANK THANK THANK, I LOVE YOU!!!!!!

PD: I have a problem, first all work perfect, but about 3 hours all stop, why?

Thank

doenertier - July 25, 2014, 11:09 am

Hey Is the mining fud or. Will. The avira Block. IT?

Classy Pigeon - September 7, 2014, 2:59 am

Thanks alot for this guide. High quality and easy to understand, thanks!

EDIT: Miner file, can i use the example or do i need to host my own?

Retaliationist - October 12, 2014, 12:18 pm

I tried all those setting because i already had a slush's pool setup and everything i uploaded the miner.dat file to dropbox.com (not sure if that is what you mean) and all the settings are the same put my username and my password which shows x on slush's pool (can't change it) used the first Algorithm 2 GPU intensity and max GPU Temp is defaulted to 83C. I have more settings because i have imminent monitor 3. someone please help me out here.

UnfriendlySolutions - August 1, 2015, 4:47 pm

this isnt working for me, im set up to use it pools are set up, download miner.dat is fine it just says "unable to start mining" I've tried a lot of different pools and it just wont go. any help would be much appreciated

KnockSteadys - August 19, 2015, 6:26 am

nice guide man this will help a lot

glou - September 29, 2015, 4:48 pm

hi bro

my imminent monitor is not working and you ?

PolkDaHulk88 - November 5, 2015, 1:53 pm

Hey, can you do an updated version of this tutorial? Things have changed and i'd like a new tutorial. Thanks!

sou1010 - December 3, 2015, 1:52 am

thnak you for this guide it s really clear

ambition69 - December 4, 2015, 4:04 am

This sounds like it would be a successful program

ballsdeeper - December 4, 2015, 11:37 pm

Nice interesting guide and tool....

dankmage56 - December 4, 2015, 11:42 pm

look good and nice might buy

Dancingfuhrer - January 17, 2016, 7:50 am

So i was wondering. is it completely save to give them a picture of my ID CARD and all my other personal info? because they ask me to do that when i create an account.

serafeim35 - March 9, 2016, 1:43 am

don't buy imminent monitor im waiting 5 days for a support answer

AldocMoth - June 24, 2016, 10:57 am

thanks for this great tutorial man
i needed it

Passion Fruit - June 24, 2016, 11:01 am

Very interesting, how much processing power does mining do? ie Would they notice a heavy change?

ejshadow - June 25, 2017, 1:06 am

I'm still waiting for support!!!!!!

The crypto miner thing doesn't work and all I get is "Downloading miner.dat"

BinaryFox - July 14, 2017, 10:00 am

Thanks for share ! Best methode for minning

Jopemeister - July 14, 2017, 10:05 am

thread is 3 years old, if you want support go make your own thread

kubix32 - September 1, 2017, 3:33 am

Awensome tutorial. Thanks alot for guide. HQ :) Thanks

Shadowdeal - September 5, 2017, 1:46 am

really good job for you nice thread HQ tutorial

exploitlove35 - September 7, 2017, 2:39 am

What should I write on the Miner File? I do not understand.
