Thread: [Legion | How to become a skilled Hacker. \(A Beginner's guide to becoming a Hacker\)](#)

Zabuza? - March 1, 2014, 6:04 pm

Hello HackForums. Now let's be honest. This forum is filled with skids, wanna-be's, and liars. I would like to change that.

In this thread I will explain how to become a hacker. As in how to begin, how to learn, how to become a legitimate hacker, rather than a skid.

How to begin

Now look. Before you continue on with this thread, ask yourselves these questions. Are you dedicated? Do you have motivation? Do you really want to spend hours of time learning to hack?

If you answered no to any of these, leave this page. Don't even bother reading. You will only waste hours of your life.

If you answered yes, let's begin.

I'm going to give a quick explanation of what hacking actually is. Hacking is the art of seeking and utilizing vulnerabilities in systems, servers, or firewalls.

Yes, that means spreading a virus is NOT hacking. Neither is keylogging, RATting, or booting people offline.

Important terms in hacking

Now there are so many important terms in hacking it's ridiculous.

I'm not going to paste any in, but rather give you links to sites with true information.

Link 1: <http://evestigat.com/cyber-crime-hacker-terms-to-know/>

Link 2: <http://www.geocities.com/SiliconValley/Lab/7378/term.htm>

Those will help you along the way. Knowing proper terms is vital for hacking.

What to hack

Now there are so many different things to hack/learn to hack. Some people would like to learn to hack websites. Some prefer to hack servers. Some prefer to hijack/hack home/work computers.

Now you don't have to choose one, though I'd recommend starting with one, and then when you get fairly good with it, move on.

Now there are many resources for different things.

If you are into website pen-testing (Website Penetration Testing, or website hacking) I'd recommend dual-booting a Linux Distribution such as Kali. Operating systems like Kali come with loads of helpful tools for hacking.

TIP: Something which you want to avoid is only learning how to use tools. Try learning how they work as well.

If you would like to learn how to hack servers, look into E-books on it. That is one thing which I myself haven't looked into much, though I know there are so many resources for it it's ridiculous, even around the forum.

Now if you are into hacking home/work computers, learn to understand how RDP works, and how firewalls and similar security programs work. This will help you in the near future. Again, look around the forum on how to hack this.

TIP: I know I left out several things people are interested in hacking, example WiFi networks. The ones I included are the three ones beginners are usually interested in, and beginners will usually discover other hacking targets and methods as they learn about the basic ones.

What to learn

Now knowing what to learn is key to hacking. Now I can simplify it easily.

What should you learn? Basics of programming languages, terms, how to use programs that are often utilized for hacking targets similar to yours, and security.

Now a little more explanation.

What languages you should learn depends on what you are wanting to hack. If you are looking to hack websites, languages often used on websites would be helpful. For example: PHP, Javascript, MySQL, and HTML. Learning the basics of all those will be incredibly helpful.

Now say you wanted to learn how to hack general computers. I would recommend API languages, especially ones commonly used on Windows. Some good examples would be C++, VB, or Java. Some knowledge of commands used in CMD would be somewhat vital as well.

Now learning how to use programs that are often used for targeting your target. It really depends what your target is. Say you were targeting a website. I would want to learn how to use NMap, Metasploit, PuTTY, OWASP ZAP, and just how to overall use Linux Distributions as these are all regularly used when pentesting websites.

It goes the same way with hacking anything else. Do research into tools that are used for hacking your target, and learn them.

TIP: Don't take short cuts when learning. Believe me. I have. It will only confuse you later on.

Now for staying secure. There's so much to this I am just going to paste a thread I have made in the past.

<https://hackforums.net/showthread.php?tid=3957071>

What you shouldn't waste your time on

RATting, Keylogging, and spreading. Now don't get me wrong. RATting, Keylogging, and spreading can be very helpful when gathering information such as passwords and account info or making cash. What I mean by this is don't waste too much time doing them if you are actually wanting to hack. These aren't hacking forms, so I wouldn't spend much learning about them. Though it is nice to know how they work of course, though that will come fairly naturally if you ever learn a programming language like C#.

Need Help?

There will come a time that every hacker will need help, or need to ask a question. That's why Legion has a help desk. You may ask any question that's hacking-related on it, and skilled, experienced members will answer you.

Legion Hacking Helpdesk: <https://hackforums.net/showthread.php?tid=3922225>

If you ever have any questions, feel free to post on the helpdesk or drop me a PM. I will help you to the best of my abilities.

Tomthetom00 - March 1, 2014, 6:06 pm

Good thread, I hope itll help new comers.

?ash - March 1, 2014, 6:06 pm

Wow now i'm a leet hacker thanks!

cya nsa

Zabuza? - March 1, 2014, 6:08 pm

(Mar 1, 2014 07:06 PM)?ash Wrote: [\[CITE\]](#) Wow now i'm a leet hacker thanks!

cya nsa

And this is the perfect example of what I was talking about in the first few sentences.

(I JK, though don't try and be funny by trying to mock my thread)

TheGrayAviator - March 1, 2014, 6:09 pm

Very nice thread Ceoff, keep up the good work, your new team leader will appreciate it very much.

Mopex - March 1, 2014, 6:13 pm

Nice thread, it can help people who don't have much experience within hacking.

?ash - March 1, 2014, 6:21 pm

(Mar 1, 2014 07:08 PM)Ceoff Wrote: [\[CITE\]](#) And this is the perfect example of what I was talking about in the first few sentences.

(I JK, though don't try and be funny by trying to mock my thread)I wasn't mocking your thread o.o I just thought the joke was pretty funny. Who says you have to be serious all the time.

If you want a serious response I would see the tut gives someone who wants the start hacking a good idea of where they should and shouldn't start.

Nina Dobrev TM - March 1, 2014, 6:22 pm

Lmao nice thread Ceoff, it's actually really helpful.

It's HQ and you spent time on it, that's what matters. It's great.

coldfusion - March 1, 2014, 6:32 pm

this sucks.

Quote:Now say you wanted to learn how to hack general computers. I would recommend API languages

please explain what an 'API language' is.

Quote:Now learning how to use programs that are often used for targeting your target. It really depends what your target is. Say you were targeting a website. I would want to learn how to use NMap, Metasploit, PuTTY, and OWASP ZAP, as those are all regularly used when pentesting websites.

10/10 OP, my jimmies are rustled. If this was a troll you're successful.

Nyonic - March 1, 2014, 6:32 pm

Hi, It may appear to some that I am attempting to trash your thread but in no way shape or form am I.

<http://prntscr.com/2x2rc2> Can you PM me or reply to my post the hacking advantages of learning how to use putty?

TheGrayAviator - March 1, 2014, 6:35 pm

(Mar 1, 2014 07:22 PM)Nina Dobrev TM Wrote: [\[CITE\]](#) Lmao nice thread Ceoff, it's actually really helpful.

It's HQ and you spent time on it, that's what matters. It's great.

It's definitely HQ, no questions asked.

But soon it will be buried by LQ, useless threads.

Which will be sad, in my opinion.

If the moderators could make it a stickie, it would certainly be helpful.

1n9i9c7om - March 1, 2014, 6:37 pm

With "learn PuTTY", don't you actually mean learn more about Linux, as you'll most likely control Linux servers via SSH using PuTTY?

There is nothing you have to learn with PuTTY - enter the server IP, done. Everything else is Linux.

coldfusion - March 1, 2014, 6:38 pm

(Mar 1, 2014 07:37 PM)1n9i9c7om Wrote: [\[CITE\]](#) With "learn PuTTY", don't you actually mean learn more about Linux, as you'll most likely control Linux servers via SSH using PuTTY?
There is nothing you have to learn with PuTTY - enter the server IP, done. Everything else is Linux. I'd be surprised if this guy knew what *nix was.

Zabuza? - March 1, 2014, 6:39 pm

(Mar 1, 2014 07:32 PM)Nyonic Wrote: [\[CITE\]](#) Hi, It may appear to some that I am attempting to trash your thread but in no way shape or form am I.

<http://prntscr.com/2x2rc2> Can you PM me or reply to my post the hacking advantages of learning how to use putty?

Oh, I said PuTTY simply because it can be useful when gaining and utilizing root access. It's not required, though I just feel that it is very helpful.

Creepy - March 1, 2014, 6:39 pm

This is a very nice and detailed guide. Really easy to read, also really easy to understand as a beginner.

TheGrayAviator - March 1, 2014, 6:40 pm

(Mar 1, 2014 07:37 PM)1n9i9c7om Wrote: [\[CITE\]](#) With "learn PuTTY", don't you actually mean learn more about Linux, as you'll most likely control Linux servers via SSH using PuTTY?
There is nothing you have to learn with PuTTY - enter the server IP, done. Everything else is Linux. I think that's what he meant by "learn PuTTY". No doubt, it should've been learn a Linux distro or something along the line.

trig - March 1, 2014, 7:23 pm

I expected more, but I guess this is good for newcomers. The only part I think was some kind of helpful or "HQ" was where you said to ignore learning about ratting & spreading etc. It is probably how most people start today and is indeed very bad.

DataExhauster - March 1, 2014, 7:38 pm

Although a rather nice thread this would not help many newbags get started as for this is very basic. Great job anywho

Zabuza? - March 1, 2014, 7:42 pm

(Mar 1, 2014 08:38 PM)DataExhauster Wrote: [\[CITE\]](#) Although a rather nice thread this would not help many newbags get started as for this is very basic. Great job anywho
The point of it is to be basic... I don't see what you mean here, sorry.

Zabuza? - March 1, 2014, 8:10 pm

(Mar 1, 2014 09:04 PM)Teavana Wrote: [\[CITE\]](#) You are so blind when it comes to the definition of hacking, so blind I can't even take the rest of the stuff posted seriously. How is this in the name of Legion?

Actually I'm not. Feel free to tell me where I should improve the definition, as it seems you are blind and somewhat ignorant yourself. Though, I'm always open to constructive criticism, so instead of just whining, please tell me where to improve in my definition.

(Mar 1, 2014 07:40 PM)Greyhat.Infiltrator Wrote: [\[CITE\]](#) I think that's what he meant by "learn PuTTY". No doubt, it should've been learn a Linux distro or something along the line.

Yeah, that would make much sense. I was essentially saying it in the context mentioned. I will fix that in a second.

TheGrayAviator - March 1, 2014, 8:13 pm

(Mar 1, 2014 09:04 PM)Teavana Wrote: [\[CITE\]](#) You are so blind when it comes to the definition of hacking, so blind I can't even take the rest of the stuff posted seriously. How is this in the name of Legion?

Yeah, the definition of hacking shouldn't be limited to computers only. There are other definitions to the term "Hacking", that he could've addressed as well.

Zabuza? - March 1, 2014, 8:22 pm

(Mar 1, 2014 09:13 PM)Greyhat.Infiltrator Wrote: [\[CITE\]](#) Yeah, the definition of hacking shouldn't be limited to computers only. There are other definitions to the term "Hacking", that he could've addressed as well.

For the context of my tutorial the definition I included was appropriate.

Zabuza? - March 1, 2014, 8:46 pm

(Mar 1, 2014 09:26 PM)Teavana Wrote: [\[CITE\]](#) Rating is a gateway to hacking, as is anything malicious - it fuels you to learn, sure it's stupid and pointless in some minds, but don't discourage it. Did you just say rating and essentially spreading will come easy if you know how to program C#? Speechless.

So you tell everyone DDoSing isn't hacking, then suggest we read your thread 'a hackers guide to ddosing' The irony.

Would really not recommend VB or Java to anyone trying to hack, ASM, C, C++, and a handful of database & scripting languages. If you know commands in CMD, great, but it's not vital. Learn commands in, say, I don't know...Terminal?

And your entire thread is based off of these paragraphs. Yikes.

First one can be voided, firstly; Kali shouldn't be installed - ever, perhaps on a virtualbox, but not dualboot, live CD - essential. Secondly, you said you need to learn to hack, don't use software - same goes for Linux, don't jump into Kali, actually learn how to use Linux or don't use it at all. Disgraceful.

Finding eBooks, very insightful. Wow

This has to be the biggest misconception I have yet to read. That's like saying all hackers are thief's. Hacking is literally a simple concept, do some research

Spreading a virus isn't hacking, but how you do it can be, how you keylog and rat or boot can also be hacking.

I get your tutorial is more malicious cyber security hacking and such, but don't claim what is and what isn't, when it's a very big field, obviously one you don't understand.

This forum is filled with people of all variety, if you don't like it - close your laptop. Welcome to reality.

Hackers can be skids, one of the most accomplished hackers is a skid. Do some research.

Thanks for the info!Clearly you were ignorant to what the first part said. How Keylogging works comes easily when you know a language like C# due to the functions in it that are so often used for KeyLoggers. Make sure to actually read. Speechless.

Now for another accounting of your ignorance. I said booting people offline. That is not hacking. You are putting someone's IP into a little text box, then selecting what type of attack, and how long,

and then the port. That is not hacking. Performing a manual DDoS attack kind of is, though it is still technically not hacking, as you are not gaining any data from it, except for how strong a server is in some cases. The reasoning for my title is simple - A DDoS attack is often used by hackers.

The third thing you said is completely opinion based, and the languages I mentioned are very helpful. And CMD in a lot of cases is vital, notice how I didn't say it was always vital?

Does it matter how you install on OS? I said Dual Boot because a VM can cause issues with internet connections. A LiveUSB or LiveCD works fine as well.

And yes, you should learn how to hack. And using software speeds up the process. Though notice how many times I stated one should know how it works? Utter ignorance.

Finding E-books is a good way to find info, because of how many free ones there are. Go to google, search hacking interest E-book, and you can actually learn a lot.

And I do understand it, though RATting is not hacking, even if it's an introduction to one. Take a look at the definition of Hacking.

And yes, I realize the forum is filled with skids. And no, I'd rather not close my laptop. I'd rather help members grow in their hacking capabilities so they don't turn out to be stuck-up, ignorant, users. You know, like you.

And a skid means Script Kiddy. By definition (though it is slang) a script kiddy is someone who just uses tools and doesn't understand them. Again, proving your utter ignorance, I never stated a skid can't be a hacker. It's just better to stay away from being one.

Thanks for the information. Actually wait, you just proved to me your ignorance. Never mind.

Zabuza? - March 1, 2014, 9:35 pm

(Mar 1, 2014 10:05 PM)Teavana Wrote: [\[CITE\]](#) If you can't take criticism without whining like a child, perhaps don't make a tutorial. Welcome to reality. Yes I'm ignorant, I'm human. You're ignorant, yet I choose not to whine about it. Take note.

c# is simply the language used to program them, I guarantee there are tons and tons of users using a keylogger right now that literally don't know jack shit of C#, and even the programming language used to program it. Knowing a language doesn't mean you know everything about the things you can program - you can program a bot in C, that doesn't imply a C guru knows everything about bots.

If someone physically rips your router out of your wall, not only would I thank them, but I can use it as an example for this:

You would no longer have internet. Now, if I do that across the globe, I've simplified it - that's hacking. Hacking isn't gaining knowledge, do you even know what you're writing a tutorial on?

Find ten 'hackers' right now, and ask them what's vital, CMD, or terminal. It's like asking this: What's vital, a dictionary to the language you seek, or a dictionary to a language in which you do not. Sure you can hack on Windows, easy - but do you really want to?

Do you understand the difference?

Speed isn't important, learning isn't a race. You learn as fast as you can, which in your case obviously isn't too quick - you choose to write awfully written tutorials over learning something productive. Read what I said, Jesus.s

That's called sarcasm, not sure how you missed that....

RATing is hacking - you're a moron. Introduction to one of what, 'types of hacking'? Jesus...

Do you think writing biased information and mis-guiding new members is beneficial to their learning? I've taught you around fifteen things, you've just taught me a synonym of ignorant.

Some of the most accomplished people in the world are then 'skids'. Why avoid them, it's simplicity. If I don't want to waste weeks learning all about DDoS when I just need a site down for a few minutes, why the hell not be a 'skid' for a few minutes? It's retarded not to be, I don't care to waste time on learning something I won't need.

I'll take your 'ignorant' response as a thank you, though I expect a +3 I'll still get a kick off of your poorly written response.

Hope i helped ?Yes, we're all ignorant, though some of us act on it, some of us don't. You're one of the ones who acts on it. And I can take criticism just fine, though you came here and insulted me and my tutorial, so I'm not exactly inclined to listen to you, especially when you're so ignorant and annoying. And yes, I realize that. Though learning a language not only helps users understand a program, but allows them to code their own. Notice how I said learn the basics of them? That is because it not only helps users understand how a program works, but it also helps them get interested in programming which is never a bad thing.

Oh yes, more ignorance showing. Now someone ripping a router out of my wall would not be hacking. That would be considered vandalism my friend.

Now I am not going to spend time talking to 'hackers', because I am surrounded by them in Legion. Apparently you know nothing of the group. Quite honestly, you don't deserve to be in it in my opinion. And if I didn't know what I was writing a tutorial on, Acroz wouldn't have approved it.

Now I said CMD because of how many users use Windows. Knowing some CMD commands is generally helpful knowledge.

And now you're just saying BS. What does speed have to do with anything? You are so stupid. This is why you shouldn't be in Legion. I even said to take your time learning, and to not take any shortcuts.

Take a look at your signature. So far, you haven't followed it.

And you're a moron. Look. RATting is not hacking. Again, you really shouldn't be in Legion. RATing can be used to help with hacking, though RATting itself is not hacking.

And look, idiot. You are complete and utter scum. My guide has no issues in it, and someone who's too idiotic to follow their own signature shouldn't be in a group like Legion, or judging my thread. You are complete trash.

And wtf would you be a skid when you could learn how things work? Not only will one be able to hack better in the long run, but one will not turn out like you!

Again, idiot scum like you are what has brought Legion's reputation down over the years.

Piss off, and again, you don't deserve to be a member of Legion.

?ash - March 1, 2014, 9:38 pm

I feel that the title of the thread should be changed. It's very misleading.

TheGrayAviator - March 1, 2014, 9:42 pm

This is just getting ridiculous, OP please close your thread.

Zabuza? - March 1, 2014, 9:42 pm

EDIT: If I understand "Legion" correctly, you are people that want to teach. If a person say you're not teaching correctly, he's only helping out the whole group. See, I'm happy to take feedback. If you look throughout the thread you'll see I've actually made quite a few changes due to people's suggestions. The reason I started to fight with this member in particular is because he insulted me saying I'm a disgrace to Legion. I refuse to let that pass.

If he has actually given me some suggestions, instead of just saying my thread was full of BS, I wouldn't have gotten angry the slightest bit.

And I wasn't the one to remove him from Legion. Some of the higher rank members in Legion saw him doing what he did and removed him.

And yes, Legion is a group to teach. We are like brothers and sisters learning together, though I assure you, that user was no friend nor brother of mine.

ModBodDolphin - March 2, 2014, 9:21 am

Thanks for the article dude! First one I have read since joining and has taught me quite a lot ;)

SB Azul - March 2, 2014, 9:23 am

Hi, It may appear to some that I am attempting to trash your thread but in no way shape or form am I.

Th3PonyWizard - March 2, 2014, 9:24 am

It was all fine until I've read.

Quote: If you are into website pen-testing (Website Penetration Testing, or website hacking) I'd recommend dual-booting a Linux Distribution such as Kali. Operating systems like Kali come with loads of helpful tools for hacking.

No, No, No. There's absolutely no need for a whole Linux Distribution for website exploitation when the only thing you actually need is a browser, which comes in default in every operation system you install. SQLi? Browser. XSS? Browser (One without built-in filters). LFI? Browser. RFI? Browser. And even if you'll become this advanced to the point of managing to include and combine several tools to suit up an attack pattern, Kali is utter shit when you can just move on to linux with a proper distribution such as Debian, or even Ubuntu.

Quote: TIP: Something which you want to avoid is only learning how to use tools. Try learning how they work as well.

Or even better, don't. Don't LEARN tools, they're nothing but an extension of your own knowledge. And when something that is supposed to automate and fasten up your action, actually requires learning from the user, it's futile.

Quote: I would recommend API languages, especially ones commonly used on Windows. Some good examples would be C++, VB, or Java.

API languages? Call it proper High-Level programming languages on a scripting basis or a compilable basis.

Not necessarily a bad tutorial, but it's not enough in-depth to refer beginners to, and absolutely not something I'd call a tutorial over how to become a skilled hacker. You've pointed out several ideals which are important and kudos for that, though.

Zapu - March 2, 2014, 9:29 am

I think you're misunderstanding some things here, which have already been said. I applaud you for your efforts, and I'm not saying you're shitty as fuck, and you might as well give up. But I think this guide just wasn't up to par for your full potential.

As for hacking home computers, I have never met anyone who hacks boxes using Java, or what you call "API Languages"

The main languages are Python/Perl, C and some flavor of Assembly.

Zabuza? - March 2, 2014, 12:51 pm

No, No, No. There's absolutely no need for a whole Linux Distribution for website exploitation when the only thing you actually need is a browser, which comes in default in every operation system you install. SQLi? Browser. XSS? Browser (One without built-in filters). LFI? Browser. RFI? Browser.

And even if you'll become this advanced to the point of managing to include and combine several tools to suit up an attack pattern, Kali is utter shit when you can justy move on to linux with a proper distribution such as Debian, or even Ubuntu.

Or even better, don't. Don't LEARN tools, they're nothing but an extension of your own knowledge. And when something that is supposed to automate and fasten up your action, actually requires learning from the user, it's futile.

API languages? Call it proper High-Level programming languages on a scripting basis or a compilable basis.

Not necessarily a bad tutorial, but it's not enough in-depth to refer beginners to, and absolutely not something I'd call a tutorial over how to become a skilled hacker. You've pointed out several ideals which are important and kodus for that, though. Thanks for your input ^-^ Though the reason I said a Linux Distro is because of how helpful they can be. I said they're a good idea, not that they're required.

Now I think it's a good idea to learn tools, as they simplify hacking. But, you should also know how they work, as that can help for more manual hacking when needed.

Thanks for your input again!

Brule - March 2, 2014, 1:59 pm

Really cool guide, explaining things in high quality. Thanks for making this !

0x03a8 - March 2, 2014, 5:03 pm

Add mysql to the list of web languages to learn?

I mean.. Mysql Injection is a bit hard if you don't understand MySQL :)

Good job on this guide, keep it up Legion :)

Why are Linux Distros better. Do they have a better web browser rofl

"Some knowledge of commands used in CMD would be somewhat vital as well."

CMD rofl. Can you tell me what commands you need apart from dir and cd?

(Feb 28, 2014 05:20 PM)Ceoff Wrote: [\[CITE\]](#) Thanks. Though I must admit, I was very ignorant to some of the errors in here. I must apologize to Shadow Realm, even if it has been a while, as I got mixed up in a few areas.

Though the only areas were the following:

- I said Metasploit instead of PuTTY (Corrected). I get these mixed up far to often.

- I mixed up GPS and GP/S (Corrected)

Again, sorry for the two mistakes in the thread. They have all been fixed, and this is now a reliable guide, free of errors.

This guy is a genius rofl

CMD rofl. Can you tell me what commands you need apart from dir and cd?

This guy is a genius roflLinux Distributions often include loads of tools that are very helpful.

CMD is very helpful as many targets -Especially if you want to get into hacking RDP's- run Windows.

And I'm not a genius, in fact I'm far from it. Not a single member on this forum is a genius, though there are some who rise above the others. And yes, surprisingly enough I do make mistakes. Such as mixing up 2 words, which you seem to think is much bigger than it is.

Now look. If you are not going to give me some constructive criticism, a question, or a simple thank you, then don't bother posting. It's a waste of both of our time.

I guess that could be helpful ? I actually completely forgot about it. You're right, you can't do much as far as some types of databases go without a little MySQL knowledge. I will add that language now :)

Often include loads of tools, What kind of "tools" does a Debian installation come with by default.

Why do you need to know anything about CMD commands for an RDP, It's a GUI rofl.

"Such as mixing up 2 words, which you seem to think is much bigger than it is."

That's not a mixup, That's a retard trying to look cool

I realize that, though I'm more talking about if I wanted to hack just a regular user.

badboyhot - March 3, 2014, 7:13 am

thanks for sharing this important information about hacking

LogOut - March 3, 2014, 7:49 am

Good intro to hacking,

Links with the terms were also very helpful, I needed a brush-up.

...There are many different ideas regarding hacking in general, and the learning process.

As well as what is considered to be "hacking".

In a sense, every reply you've received is biased so don't worry about it!

I'd love to see a follow up to this soon. (Maybe a thread focused on Web hacking?)
