Thread: [\[Moodle Hashes\] 5737 Hashes](#)

dumle11 - March 4, 2014, 2:32 am

Here I have a list of Moodle hashes (I think its something mixed with md5). If someone could give it a shot. Thanks in advance!

Code <http://pastebin.com/fzvr9f9s>

Left: <http://pastebin.com/raw.php?i=xBvtQ9gk>

I have a feeling that some may have salts.

That is quite a complex password, but normally you'll get about a 80% crack rate easily on a list like this because most people won't have extremely complex passwords. I got less than a 20% crack rate which is slightly odd in my eyes if they were all passwords. Could also be that there is spam bots on the moodle that all have similar, complex passwords, but no way to really tell.

dumle11 - April 20, 2014, 12:47 pm

Sorry for the late response. These passwords are from a college, so they should be quite simple, because most belong to either students or lectures. Btw, thanks for that 20% :)

@edit: Forezza is there a way to contact you outside the hackforums (im not able to send pm - requires 25 posts)?
